Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.1/2.6/2.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.

GC Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17324-T07, RACER Former MTM

Report Number: 240-6710-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/09/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GW-17324-120811-EM-026 (240-6710-1), GW-17324-120811-EM-027 (240-6710-2), GW-17324-120811-EM-028 (240-6710-3), GW-17324-120811-EM-029 (240-6710-4), GW-17324-120811-EM-030 (240-6710-5), GW-17324-120811-EM-031 (240-6710-6), GW-17324-120811-EM-032 (240-6710-7), GW-17324-120811-EM-033 (240-6710-8), GW-17324-120811-EM-034 (240-6710-9) and TB-17324-120811-EM (240-6710-10) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/15/2011, 12/16/2011, 12/17/2011 and 12/20/2011.

1,1,2,2-Tetrachloroethane failed the recovery criteria high for LCS 240-27185/4.

Sample GW-17324-120811-EM-031 (240-6710-6)[14.28X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Job ID: 240-6710-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

POLYCHLORINATED BIPHENYLS (PCBS)

Samples GW-17324-120811-EM-026 (240-6710-1) and GW-17324-120811-EM-030 (240-6710-5) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 12/14/2011 and analyzed on 12/15/2011.

No difficulties were encountered during the PCBs analyses.

All quality control parameters were within the acceptance limits.

4. Were the custody papers signed in the appropriate place? (Yes) No
5. Packing material used: (Bubble Wrap) Foam None Other _____
6. Cooler temperature upon receipt 4.0 °C See back of form for multiple coolers/temps
   METHOD: (IR) Other _____
   COOLANT: (Wet Ice) Blue Ice Dry Ice Water None
7. Did all bottles arrive in good condition (Unbroken)? (Yes) No
8. Could all bottle labels be reconciled with the COC? (Yes) No
9. Were sample(s) at the correct pH upon receipt? Yes No (NA)
10. Were correct bottle(s) used for the test(s) indicated? (Yes) No
11. Were air bubbles >6 mm in any VOA vials? Yes (No) NA
12. Sufficient quantity received to perform indicated analyses? (Yes) No
13. Was a trip blank present in the cooler(s)? (Yes) No Were VOAs on the COC? (Yes) No

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other
Concerning

14. CHAIN OF CUSTODY

The following discrepancies occurred:

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) _____ were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in Sample Receiving to meet recommended pH level(s). *Nitric Acid Lot# 110410-HNO_3; Sulfuric Acid Lot# 041911-H_2SO_4; Sodium Hydroxide Lot# 121809 -NaOH; Hydrochloric Acid Lot# 041911-HCl; Sodium Hydroxide and Zinc Acetate Lot#* 100108-$(CH_3COO)_2ZN$/NaOH. What time was preservative added to sample(s)? _____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.0
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD exceeds the control limits
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17324-T07, RACER Former MTM

Report Number: 240-6762-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/10/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.5, 3.2C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GW-17324-120911-EM-035 (240-6762-1), GW-17324-120911-EM-036 (240-6762-2), GW-17324-120911-EM-037 (240-6762-3), GW-17324-120911-EM-038 (240-6762-4), GW-17324-120911-EM-039 (240-6762-5), GW-17324-120911-EM-040 (240-6762-6), GW-17324-120911-EM-041 (240-6762-7), GW-17324-120911-EM-042 (240-6762-8), GW-17324-120911-EM-043 (240-6762-9), GW-17324-120911-EM-044 (240-6762-10), GW-17324-120911-EM-045 (240-6762-11) and TB-17324-120911-EM (240-6762-12) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/19/2011 and 12/20/2011.

Samples GW-17324-120911-EM-042 (240-6762-8)[16.67X] and GW-17324-120911-EM-045 (240-6762-11)[55.56X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the VOCs analyses.

All quality control parameters were within the acceptance limits.

Job ID: 240-6762-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample GW-17324-120911-EM-040 (240-6762-6) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 12/15/2011 and analyzed on 12/19/2011.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-26943/9-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

No other difficulties were encountered during the SVOC analysis.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples GW-17324-120911-EM-040 (240-6762-6) and GW-17324-120911-EM-043 (240-6762-9) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 12/14/2011 and analyzed on 12/15/2011.

No difficulties were encountered during the PCBs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Sample GW-17324-120911-EM-040 (240-6762-6) was analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 12/13/2011 and analyzed on 12/14/2011.

Several analytes were detected in method blank MB 240-26559/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Sample GW-17324-120911-EM-040 (240-6762-6) was analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared on 12/19/2011 and analyzed on 12/20/2011.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the mercury analysis.

All other quality control parameters were within the acceptance limits.

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.2, 2.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17324, RACER MTM

Report Number: 240-7039-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/16/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GW-017324-121511-TP-01 (240-7039-1) and TB-017324-121511-TP-01 (240-7039-2) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/26/2011.

No difficulties were encountered during the VOCs analyses.

All quality control parameters were within the acceptance limits.

TestAmerica Cooler Receipt Form/Narrative **Lot Number:** #7039
North Canton Facility

Client CLA Project _____ By: J Vance
Cooler Received on 12.16.11 Opened on 12.16.11 (Signature)
~~FedEx~~ UPS DHL FAS Stetson Client Drop Off TestAmerica Courier Other _____
TestAmerica Cooler # AL620 Multiple Coolers Foam Box Client Cooler Other _____

1. Were custody seals on the outside of the cooler(s)? Yes ~~No~~ Intact? Yes No ~~NA~~
   If YES, Quantity _____ Quantity Unsalvageable _____
   Were custody seals on the outside of cooler(s) signed and dated? Yes No ~~NA~~
   Were custody seals on the bottle(s)? Yes No
   If YES, are there any exceptions? _____
2. Shippers' packing slip attached to the cooler(s)? ~~Yes~~ No
3. Did custody papers accompany the sample(s)? ~~Yes~~ No Relinquished by client? ~~Yes~~ No
4. Were the custody papers signed in the appropriate place? ~~Yes~~ No
5. Packing material used: Bubble Wrap Foam None Other _____
6. Cooler temperature upon receipt 1.8 °C See back of form for multiple coolers/temps
   METHOD: ~~IR~~ Other _____
   COOLANT: ~~Wet Ice~~ Blue Ice Dry Ice Water None
7. Did all bottles arrive in good condition (Unbroken)? ~~Yes~~ No
8. Could all bottle labels be reconciled with the COC? ~~Yes~~ No
9. Were sample(s) at the correct pH upon receipt? Yes No ~~NA~~
10. Were correct bottle(s) used for the test(s) indicated? ~~Yes~~ No
11. Were air bubbles >6 mm in any VOA vials? Yes ~~No~~ NA
12. Sufficient quantity received to perform indicated analyses? ~~Yes~~ No
13. Was a trip blank present in the cooler(s)? ~~Yes~~ No Were VOAs on the COC? ~~Yes~~ No

Contacted PM _____ Date _____ by _____ via Verbal Voice Mail Other
Concerning

14. CHAIN OF CUSTODY

The following discrepancies occurred:

15. SAMPLE CONDITION

Sample(s) _____ were received after the recommended holding time had expired.
Sample(s) _____ were received in a broken container.
Sample(s) _____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in Sample Receiving to meet recommended pH level(s). *Nitric Acid Lot# 110410-HNO_3; Sulfuric Acid Lot# 041911-H_2SO_4; Sodium Hydroxide Lot# 121809 -NaOH; Hydrochloric Acid Lot# 041911-HCl; Sodium Hydroxide and Zinc Acetate Lot#* 100108-*$(CH_3COO)_2ZN$/NaOH*. What time was preserved added to sample(s)? _____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21031-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/14/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.6 C.

Sample IDs reflect January collection dates beginning on page 2 of the chain of custody. The dates should be February and are logged as such. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/14/2013 and analyzed on 02/15/2013.

2-Hexanone, Acetone and Methylene Chloride were detected in method blank MB 240-75416/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Job ID: 240-21031-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 02/19/2013 and analyzed on 02/25/2013.

No difficulties were encountered during the SVOCs analyses.

All quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 02/18/2013 and analyzed on 02/20/2013.

No difficulties were encountered during the PCBs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Samples S-021113-SM-001 (240-21031-1), S-021113-SM-004 (240-21031-4), S-021113-SM-010 (240-21031-10), S-021213-SM-019 (240-21031-19), S-021213-SM-020 (240-21031-20), S-021213-SM-025 (240-21031-25), S-021213-SM-026 (240-21031-26), S-021213-SM-031 (240-21031-31), S-021213-SM-037 (240-21031-37), S-021213-SM-038 (240-21031-38), S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 02/14/2013 and analyzed on 02/15/2013 and 02/18/2013.

Barium, Calcium and Manganese were detected in method blank MB 240-75344/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Samples S-021213-SM-041 (240-21031-41)[5X], S-021213-SM-042 (240-21031-42)[5X] and S-021213-SM-043 (240-21031-43)[5X] required dilution prior to analysis due to the nature of the sample matrix. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 02/18/2013 and analyzed on 02/20/2013.

No difficulties were encountered during the mercury analyses.

All other quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Samples S-021213-SM-041 (240-21031-41), S-021213-SM-042 (240-21031-42) and S-021213-SM-043 (240-21031-43) were analyzed for total and amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 02/19/2013.

No difficulties were encountered during the cyanide analyses.

All quality control parameters were within the acceptance limits.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21031-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/14/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.6 C.

Select samples were taken off hold by CRA on February 28, 2013. A revised chain of custody was not provided.

TOTAL METALS (ICP)

Samples S-021113-SM-002 (240-21031-2) and S-021113-SM-007 (240-21031-7) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 03/01/2013 and analyzed on 03/05/2013.

No difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
F	MS or MSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	RPD of the MS and MSD exceeds the control limits

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	RPD of the MS and MSD exceeds the control limits
E	Result exceeded calibration range.
X	Surrogate is outside control limits

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit

Glossary (Continued)

Abbreviation	These commonly used abbreviations may or may not be present in this report.
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21082-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 27, 2013. No data has changed. The VOC case narative was re-written.

RECEIPT

The samples were received on 02/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.4 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30), S-021413-SM-074 (240-21082-31), S-021413-SM-076 (240-21082-33), S-021413-SM-077 (240-21082-34), S-021413-SM-078 (240-21082-35), S-021413-SM-079 (240-21082-36), S-021413-SM-080 (240-21082-37), S-021413-SM-081 (240-21082-38), S-021413-SM-091 (240-21082-42), S-021413-SM-092 (240-21082-43), S-021413-SM-093 (240-21082-44), S-021413-SM-094 (240-21082-45), S-021413-SM-095 (240-21082-46) and S-021413-SM-096 (240-21082-47) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/15/2013 and analyzed on 02/19/2013.

Acetone and Methylene Chloride were detected in method blank MB 240-75692/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,1,2,2-Tetrachloroethane failed the recovery criteria low for the MS of sample S-021413-SM-072MS (240-21082-29) in batch 240-75692. Methylene Chloride and Trichloroethene failed the recovery criteria high.

Job ID: 240-21082-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Methylene Chloride failed the recovery criteria high for the MSD of sample S-021413-SM-072MSD (240-21082-29) in batch 240-75692. Several analytes exceeded the rpd limit.

Internal standard (ISTD) response for the following sample was outside control limits: S-021413-SM-091 (240-21082-42). The sample was re-analyzed with concurring results. The original set of data has been reported.

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-072 (240-21082-29 MS), S-021413-SM-072 (240-21082-29 MSD), S-021413-SM-073 (240-21082-30), S-021413-SM-074 (240-21082-31), S-021413-SM-076 (240-21082-33), S-021413-SM-077 (240-21082-34), S-021413-SM-078 (240-21082-35), S-021413-SM-079 (240-21082-36), S-021413-SM-080 (240-21082-37), S-021413-SM-081 (240-21082-38), S-021413-SM-091 (240-21082-42), S-021413-SM-092 (240-21082-43), S-021413-SM-093 (240-21082-44), S-021413-SM-094 (240-21082-45), S-021413-SM-095 (240-21082-46), S-021413-SM-096 (240-21082-47) were preserved during a time when there were abnormally high levels of methylene chloride background in the laboratory. Methylene Chloride was detected in the samples. An instrument blank prepared and analyzed during the same preparation time period as the samples contained 28 ug/kg of methylene chloride. The method blank, which was prepared earlier in the day, did not show a high level of methylene chloride.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30) and S-021413-SM-074 (240-21082-31) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 02/18/2013 and analyzed on 02/20/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Terphenyl-d14 (Surr) failed the surrogate recovery criteria high for S-021413-SM-072MSD (240-21082-29MSD).

Several analytes failed the recovery criteria low for the MS of sample S-021413-SM-072MS (240-21082-29) in batch 240-75889. Several analytes failed the recovery criteria high.

For the MSD of sample S-021413-SM-072MSD (240-21082-29) in batch 240-75889, Several analytes failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Several analytes exceeded the rpd limit.

Sample S-021413-SM-072 (240-21082-29)[6.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analyses.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30) and S-021413-SM-074 (240-21082-31) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 02/18/2013 and analyzed on 02/20/2013.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: S-021413-SM-072 (240-21082-29), S-021413-SM-072 (240-21082-29 MS), S-021413-SM-072 (240-21082-29 MSD), S-021413-SM-073 (240-21082-30). Lot # S65830

Job ID: 240-21082-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Two surrogates are used for this analysis. The laboratory's SOP allows 1 of these surrogates to be outside acceptance criteria without performing re-extraction/re-analysis. The following sample contained an allowable number of surrogate compounds outside limits: S-021413-SM-072 (240-21082-29). These results have been reported and qualified.

No other difficulties were encountered during the PCBs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Samples S-021313-SM-047 (240-21082-4), S-021313-SM-050 (240-21082-7), S-021313-SM-051 (240-21082-8), S-021313-SM-053 (240-21082-10), S-021313-SM-059 (240-21082-16), S-021313-SM-060 (240-21082-17), S-021313-SM-066 (240-21082-23), S-021313-SM-069 (240-21082-26), S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30) and S-021413-SM-074 (240-21082-31) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 02/18/2013 and analyzed on 02/19/2013 and 02/20/2013.

Several analytes were detected in method blank MB 240-75623/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Lead failed the recovery criteria high for the MS/MSD of sample S-021313-SM-053MS (240-21082-10) in batch 240-75857.

Antimony, Magnesium and Calcium failed the recovery criteria low for the MS of sample S-021413-SM-072MS (240-21082-29) in batch 240-75857. Several analytes failed the recovery criteria high.

For the MSD of sample S-021413-SM-072MSD (240-21082-29) in batch 240-75857, Antimony and Silver failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Antimony, Manganese and Silver exceeded the rpd limit.

Sample S-021413-SM-072 (240-21082-29)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30) and S-021413-SM-074 (240-21082-31) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 02/18/2013 and analyzed on 02/20/2013.

Mercury failed the recovery criteria high for the MSD of sample S-021413-SM-072MSD (240-21082-29) in batch 240-75953. Mercury exceeded the rpd limit.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the mercury analyses.

All other quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Samples S-021413-SM-072 (240-21082-29), S-021413-SM-073 (240-21082-30) and S-021413-SM-074 (240-21082-31) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 02/19/2013.

No difficulties were encountered during the cyanide analyses.

All quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21082-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.4 C.

Sample S-021413-SM-075 (240-21082-32) was taken off hold by CRA on February 27, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample S-021413-SM-075 (240-21082-32) was analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/15/2013 and analyzed on 02/28/2013.

Methylene Chloride was detected in method blank MB 240-76720/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Sample: S-021413-SM-075 (240-21082-32) was preserved during a time when there were abnormally high levels of methylene chloride background in the laboratory. When the sample was analyzed, it contained a high level of methylene chloride. An instrument blank prepared and analyzed during the same time period as this sample contained 28ug/kg of methylene chloride.

No other difficulties were encountered during the VOCs analysis.

Job ID: 240-21082-3 (Continued)

Laboratory: TestAmerica Canton (Continued)

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample S-021413-SM-075 (240-21082-32) was analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 02/28/2013 and analyzed on 03/04/2013.

Surrogates are added during the extraction process prior to dilution. When the sample is diluted, surrogate recoveries are diluted out and no corrective action is required.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-76773/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

The laboratory control sample for batch 76773 exceeded control limits for the following analyte(s): 3,3'-Dichlorobenzidine. This compound has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed. The results have been reported and qualified.

No other difficulties were encountered during the SVOCs analysis.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Sample S-021413-SM-075 (240-21082-32) was analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 02/28/2013 and analyzed on 03/04/2013.

No difficulties were encountered during the PCBs analysis.

All quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Sample S-021413-SM-075 (240-21082-32) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 03/01/2013 and analyzed on 03/04/2013 and 03/05/2013.

Several analytes were detected in method blank MB 240-76975/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Sample S-021413-SM-075 (240-21082-32)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Sample S-021413-SM-075 (240-21082-32) was analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 03/01/2013 and analyzed on 03/04/2013.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Sample S-021413-SM-075 (240-21082-32) was analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 02/28/2013.

Job ID: 240-21082-3 (Continued)

Laboratory: TestAmerica Canton (Continued)

No difficulties were encountered during the cyanide analysis.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21082-4

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.4 C.

Select samples were taken off hold by CRA on February 28, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021413-SM-082 (240-21082-39), S-021413-SM-083 (240-21082-40) and S-021413-SM-084 (240-21082-41) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/15/2013 and analyzed on 02/19/2013.

Acetone and Methylene Chloride were detected in method blank MB 240-75692/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,1,2,2-Tetrachloroethane failed the recovery criteria low for the MS of sample 240-21082-29 in batch 240-75692. Methylene Chloride and Trichloroethene failed the recovery criteria high.

Methylene Chloride failed the recovery criteria high for the MSD of sample 240-21082-29 in batch 240-75692. Several analytes exceeded the rpd limit.

Job ID: 240-21082-4 (Continued)

Laboratory: TestAmerica Canton (Continued)

SamplesS-021413-SM-082 (240-21082-39), S-021413-SM-083 (240-21082-40), S-021413-SM-084 (240-21082-41) were preserved during a time when there were abnormally high levels of methylene chloride background in the laboratory. When the samples were analyzed, they contained high levels of methylene chloride. An instrument blank was prepared and analyzed during the same time period as these samples were prepared; contained 28 ug/kg of methylene chloride.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Sample S-021313-SM-054 (240-21082-11) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 03/01/2013 and analyzed on 03/05/2013.

No difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 240-21158-1

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21158-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/16/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.0 C.

Samples listed on page 2 of the COC: S-021513-SM-013, S-021513-SM-014, and S-021513-SM-015, should be S-021513-SM-113, S-021513-SM-114, and S-021513-SM-115. A revised chain of custody was not provided.

TOTAL METALS (ICP)

Samples S-021513-SM-100 (240-21158-10), S-021513-SM-103 (240-21158-13), S-021513-SM-106 (240-21158-16), S-021513-SM-107 (240-21158-17), S-021513-SM-108 (240-21158-18), S-021513-SM-110 (240-21158-20), S-021513-SM-111 (240-21158-21), S-021513-SM-113 (240-21158-23) and S-021513-SM-114 (240-21158-24) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 02/19/2013 and analyzed on 02/20/2013.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

TestAmerica Job ID: 240-21158-3

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21158-3

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/16/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.0 C.

Select samples were taken off hold by CRA on February 28, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021513-SM-097 (240-21158-7), S-021513-SM-098 (240-21158-8) and S-021513-SM-099 (240-21158-9) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/17/2013 and analyzed on 02/22/2013.

Acetone and Methylene Chloride were detected in method blank MB 240-76140/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The laboratory control sample (LCS) for batch 76140 exceeded control limits for the following analytes: Chloromethane, Dichlorodifluoromethane, and Vinyl Chloride. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.

No other difficulties were encountered during the VOCs analyses.

Job ID: 240-21158-3 (Continued)

Laboratory: TestAmerica Canton (Continued)

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Sample S-021513-SM-115 (240-21158-25) was analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 03/01/2013 and analyzed on 03/05/2013.

Sample S-021513-SM-115 (240-21158-25)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21184-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/19/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.2 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021813-SM-119 (240-21184-4), S-021813-SM-120 (240-21184-5), S-021813-SM-121 (240-21184-6), S-021813-SM-123 (240-21184-8) and S-021813-SM-124 (240-21184-9) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/19/2013 and analyzed on 02/21/2013.

Acetone and Methylene Chloride were detected in method blank MB 240-76004/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes were detected in method blank MB 240-76061/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Internal standard (ISTD) response for the following sample was outside control limits: S-021813-SM-123 (240-21184-8). The sample was re-analyzed with concurring results. The original set of data has been reported.

Job ID: 240-21184-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

The laboratory control sample (LCS) for batch 76004 exceeded control limits for the following analyte: Dichlorodifluoromethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021813-SM-129 (240-21184-14), S-021813-SM-130 (240-21184-15), S-021813-SM-131 (240-21184-16), S-021813-SM-133 (240-21184-18) and S-021813-SM-134 (240-21184-19) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 02/20/2013 and analyzed on 02/25/2013.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-75907/17-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

The continuing calibration verification (CCV) for 2,2'-oxybis(1-chloropropane) associated with batch 76314 recovered above the upper control limit. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data has been reported.

No other difficulties were encountered during the SVOCs analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 240-21223-1

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 017324-T07-017, RACER Former MTM

Report Number: 240-21223-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/20/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.2 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021913-SM-148 (240-21223-13) and S-021913-SM-149 (240-21223-14) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/20/2013 and analyzed on 02/21/2013.

Several analytes were detected in method blank MB 240-76061/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-021913-SM-136 (240-21223-1) and S-021913-SM-137 (240-21223-2) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 02/21/2013 and analyzed on 02/26/2013.

Job ID: 240-21223-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Hexachlorocyclopentadiene failed the recovery criteria low for the MS/MSD of sample S-021913-SM-137 (240-21223-2) in batch 240-76429.

Sample S-021913-SM-136 (240-21223-1)[2.5X] required dilution prior to analysis due to the nature of the sample matrix. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the SVOCs analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits
F	MS or MSD exceeds the control limits
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17324-T07-017, RACER Former MTM

Report Number: 240-22052-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 03/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 5.6 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GW-017324-031413-SM-002 (240-22052-2), GW-017324-031413-SM-003 (240-22052-3), GW-017324-031413-SM-004 (240-22052-4) and TB-017324-031413-SM-001 (240-22052-7) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 03/22/2013 and 03/23/2013.

Methylene Chloride was detected in method blanks240-79232/6 and 240-79016/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The laboratory control sample (LCS) for batches 79232 and 79016 exceeded control limits for the following analytes: Dichlorodifluoromethane and Trichlorofluoromethane. These compounds have been identified as a poor performing when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

Chloromethane, Dichlorodifluoromethane and Trichlorofluoromethane failed the recovery criteria high for the MS of sample GW-017324-031413-SM-002MS (240-22052-2) in batch 240-79016.

Job ID: 240-22052-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Dichlorodifluoromethane and Trichlorofluoromethane failed the recovery criteria high for the MSD of sample GW-017324-031413-SM-002MSD (240-22052-2) in batch 240-79016.

Dichlorodifluoromethane and Trichlorofluoromethane failed the recovery criteria high for the MS of sample GW-017324-031413-SM-004MS (240-22052-4) in batch 240-79232.

Trichloroethene failed the recovery criteria low for the MSD of sample GW-017324-031413-SM-004MSD (240-22052-4) in batch 240-79232. Dichlorodifluoromethane and Trichlorofluoromethane failed the recovery criteria high.

Sample GW-017324-031413-SM-004 (240-22052-4)[2.86X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

POLYCHLORINATED BIPHENYLS (PCBS)

Samples GW-017324-031413-SM-001 (240-22052-1), GW-017324-031413-SM-005 (240-22052-5) and GW-017324-031413-SM-006 (240-22052-6) were analyzed for polychlorinated biphenyls (PCBs) in accordance with EPA SW-846 Method 8082. The samples were prepared on 03/19/2013 and analyzed on 03/27/2013 and 03/29/2013.

Surrogates are added during the extraction process prior to dilution. When the sample dilution is 5X or greater, surrogate recoveries are diluted out and no corrective action is required.

Sample GW-017324-031413-SM-005 (240-22052-5)[10X] required dilution prior to analysis due to the nature of the sample matrix. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the PCBs analyses.

All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Samples GW-017324-031413-SM-002 (240-22052-2), GW-017324-031413-SM-003 (240-22052-3) and GW-017324-031413-SM-005 (240-22052-5) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 03/18/2013 and analyzed on 03/19/2013.

Several analytes were detected in method blank MB 240-78606/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

The CCB was greater than or equal to the requested reporting for Selenium. Since the result for sample: GW-017324-031413-SM-002 (240-22052-2) was below the requested reporting limit, the result was accepted.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples GW-017324-031413-SM-002 (240-22052-2), GW-017324-031413-SM-003 (240-22052-3) and GW-017324-031413-SM-005 (240-22052-5) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 03/18/2013.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

MEMORANDUM

TO:	Shannon Richardson	REF. NO.:	017324-T07
FROM:	Michael Richardson/ss/15 MR	DATE:	March 8, 2012
CC:	Jason Bergsma		

RE: Data Quality Assessment and Validation
Soil and Groundwater Investigation - November and December 2011
RACER Former MTM - Muncie, Indiana

The following details a quality assessment and validation of the analytical data resulting from the November and December 2011 collection of soil, groundwater, and quality control samples from the RACER Former Manual Transmissions of Muncie (MTM) in Muncie, Indiana. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed by TestAmerica Laboratories, Inc. of North Canton, Ohio (TA-NC) in accordance with the methodologies presented in Table 2.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with the following guidance documents:

i. "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA 540/R-99/008, October 1999; and

ii. "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Review", EPA 540/R-94-013, February 1994.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

Sample Quantitation

The laboratory reported detected concentrations of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC), polychlorinated biphenyls (PCB), total petroleum hydrocarbons (TPH), and inorganics below the laboratory's report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

The SVOC sample analysis resulted in a concentration reported in excess of the calibration range, which was flagged by the laboratory with an "E". This concentration should be qualified as an estimated (J)

concentration and should not be reported. The analytes with concentrations in excess of the calibration range were reanalyzed at appropriate dilutions; these values should be reported.

Sample Preservation and Holding Times

Sample holding time periods and preservation requirements are presented in Table 2.

The samples summarized in Table 3 should be qualified due to violation of sample holding time periods. The remaining samples, as indicated by the sample collection, extraction and analysis dates on the chain-of-custody forms and analytical reports provided by TA-NC, were prepared and analyzed within the required holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

Method Blank Samples

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

Several laboratory method blanks were reported with parameters detected but the associated sample concentrations were either non-detect or five (5) times greater than or ten (10) times greater than the method blank result; therefore, no qualification was required.

The samples presented in Table 4 should be qualified due to laboratory contamination. The laboratory flagged the concentrations with a "B", which may be disregarded. The remaining method blank samples were reported to be free from detectable levels of target analytes, indicating no additional laboratory-attributable contamination occurred.

Surrogate Compounds - Organic Analyses

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

Percent recoveries for one surrogate were outside of the recommended control criteria for several samples during SVOC analysis. However, data are not qualified with respect to surrogate recovery unless two or more surrogates are out of specification; no qualification of the sample results is necessary.

The SVOC and PCB surrogate recoveries could not be measured or evaluated in several samples due to dilutions required to successfully analyze the samples. No qualification of these samples was required.

The surrogate recovery acceptance criteria were met for all samples that could be evaluated with the exception of samples presented with qualifiers in Table 5.

Matrix Spike/Matrix Spike Duplicate Analyses

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The inorganic control limits are defined by the methods and the NFG, which require recoveries between 75 to 125 percent with RPDs less than 20 percent for water samples and 35 percent for soil samples. The samples selected for MS/MSD analysis are identified in Table 1.

In some sample batches, no Site-specific samples were utilized as MS/MSDs; accuracy was verified by the analysis of the laboratory control sample (LCS). Qualification of samples associated with these MS/MSDs was not performed.

The samples that should be qualified due to violation of MS/MSD percent recovery criteria are outlined in Table 6. The MS/MSD percent recoveries and associated RPD acceptance criteria were met in the remaining sample analyses.

Laboratory Control Sample Analysis

The laboratory control sample (LCS) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS percent recoveries were evaluated against method and laboratory established control limits.

The LCS percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved with the exception of samples presented with qualifiers in Table 7.

Field Quality Assurance/Quality Control

The field quality assurance/quality control consisted of fifteen (15) field duplicate sample sets and six (6) trip blank samples.

Field Duplicate Samples

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 50 and 100 percent for water and soil samples, respectively. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one or two times the RL value for water and soil samples, respectively.

Table 8 presents the RPDs of detected analytes in duplicate sample sets with qualifiers. The remaining data indicated an adequate level of precision achieved for the sampling event.

Trip Blank Samples

To monitor potential cross-contamination of VOCs during aqueous sample transportation and storage, a trip blank was submitted to the laboratory for VOC analysis with each shipping cooler containing multiple samples.

The samples that should be qualified due to trip blank contamination are summarized in Table 9. No additional target analytes were reported as detected in the trip blank samples.

Overall Assessment

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted with the exception of the following:

- VOC, SVOC, and metals data were rejected in a number of samples due to MS/MSD violations.

RE: Analytical Results and Reduced Validation
Investigation Work Plan Implementation
RACER Former Manual Transmissions of Muncie
Muncie, Indiana
February 2013

INTRODUCTION

The following document details a reduced validation of analytical results for soil samples collected in support of the Investigation Work Plan implementation at the RACER Former Manual Transmissions of Muncie Site during February 2013. Samples were submitted to TestAmerica Laboratories, Inc. located in North Canton, Ohio (TAL-NC). A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2.

Standard CRA report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS),matrix spikes, and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 2 and the documents entitled:

i) "QAPP", Revision 2, April 5, 2011

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

iii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items ii) and iii) will subsequently be referred to as the "Guidelines" in this Memorandum.

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples or one per analytical batch.

The samples presented in Table 3 were qualified due to laboratory contamination. The laboratory flagged the concentrations with a "B", which may be disregarded. The remaining method blank samples were reported to be free from detectable levels of target analytes, indicating no additional laboratory-attributable contamination occurred.

SURROGATE SPIKE RECOVERIES – ORGANIC ANALYSES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC), semi-volatile organic compound (SVOC), and polychlorinated biphenyl (PCB) determinations were spiked with the appropriate number of surrogate compounds prior to sample extraction or analysis.

Each individual surrogate compound is expected to meet the laboratory control limits with the exception of SVOC analyses. According to the "Guidelines" for SVOC analyses, up to one outlying surrogate in the base/neutral or acid fractions is acceptable as long as the recovery is at least 10 percent.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the above criteria.

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per 20 investigative samples or one per analytical batch.

Organic Analyses
The LCS contained all compounds of interest. The samples that were qualified due to violation of LCS percent recovery criteria are outlined in Table 4. All remaining LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses
The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

Organic Analyses
The MS/MSD samples were spiked with all compounds of interest. The samples that were qualified due to violation of MS/MSD percent recovery criteria are outlined in Table 5. All remaining percent recoveries and RPD values were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision.

Inorganic Analyses
The MS/MSD samples were spiked with the analytes of interest and the results were evaluated using the "Guidelines". The samples that were qualified due to violation of MS/MSD percent recovery criteria are outlined in Table 5. All remaining percent recoveries and RPD values were within the control limits, demonstrating acceptable analytical accuracy and precision.

FIELD QA/QC SAMPLES

The field QA/QC consisted of six (6) field duplicate sample sets.

Field Duplicate Sample Analysis
To assess the analytical and sampling protocol precision, six (6) field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is two times the PQL value for soil samples.

Table 6 presents the RPDs of detected analytes in duplicate sample sets with qualifiers.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL.

All soil results were reported on a dry weight basis.

CONCLUSION

Based on this assessment of the information provided, the data produced by TAL-NC were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted with the exception of the following:

- SVOC non-detect data were rejected in a number of samples due to violation of MS/MSD percent recovery criteria.

RE: Analytical Results and Reduced Validation
Investigation Work Plan Implementation
RACER Former Manual Transmissions of Muncie
Muncie, Indiana
March 2013

INTRODUCTION

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Investigation Work Plan implementation at the RACER Former Manual Transmissions of Muncie Site during March 2013. Samples were submitted to TestAmerica Laboratories, Inc. located in North Canton, Ohio (TA-NC). A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2.

Standard CRA report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes, and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 2 and the documents entitled:

i) "QAPP", Revision 2, April 5, 2011

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

iii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items ii) and iii) will subsequently be referred to as the "Guidelines" in this Memorandum.

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved and delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples or one per analytical batch.

The samples presented in Table 3 were qualified due to laboratory contamination. The laboratory flagged the concentrations with a "B", which may be disregarded. The remaining method blank samples were reported to be free from detectable levels of target analytes, indicating no additional laboratory-attributable contamination occurred.

SURROGATE SPIKE RECOVERIES – ORGANIC ANALYSES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) and polychlorinated biphenyl (PCB) determinations were spiked with the appropriate number of surrogate compounds prior to sample extraction or analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the above criteria.

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per 20 investigative samples or one per analytical batch.

Organic Analyses
The LCS contained all compounds of interest. The samples that were qualified due to violation of LCS percent recovery criteria are outlined in Table 4. All remaining LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses
The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1. The laboratory performed additional site specific MS/MSD analyses internally.

Organic Analyses
The MS/MSD samples were spiked with all compounds of interest. The samples that were qualified due to violation of MS/MSD percent recovery criteria are outlined in Table 5. All remaining percent recoveries and RPD values were within the laboratory control limits or did not warrant qualification, demonstrating acceptable analytical accuracy and precision.

Inorganic Analyses
The MS/MSD samples were spiked with the analytes of interest and the results were evaluated using the "Guidelines". All percent recoveries and RPD values were within the control limits, demonstrating acceptable analytical accuracy and precision.

FIELD QA/QC SAMPLES

The field QA/QC consisted of one (1) trip blank sample and two (2) field duplicate sample sets.

Trip Blank Sample Analysis
To evaluate contamination from sample collection, transportation, storage, and analytical activities, one (1) trip blank was submitted to the laboratory for VOC analysis. All results were non-detect for the compounds of interest.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, two (2) field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is one time the PQL value for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL.

CONCLUSION

Based on this assessment of the information provided, the data produced by TA-NC were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted.

RFI REPORT
FORMER MANUAL TRANSMISSIONS OF MUNCIE FACILITY
MUNCIE, INDIANA

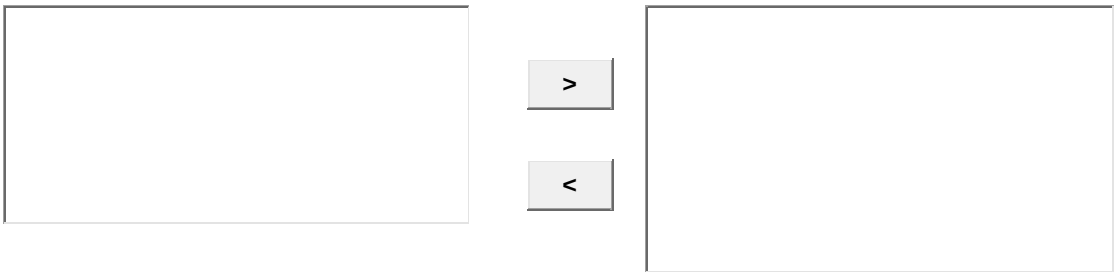
risk integrated system of closure

2006 Nondefault Industrial Closure Tool version 1.2.1

Updated July 23, 2009

Step 1 - Choose your Contaminants of Concern

Select a contaminant from the box on the left. Press the ">" to add the contaminant to your list of COCs. If you make a mistake, you can use the "<" button to remove a contaminant from the list. Repeat these steps until all COCs for your site are listed in the box on the right.



Step 2 - Modify your Exposure Assumptions

The following is a list of exposure assumptions that are commonly adjusted when deriving non-default closure levels. Any highlighted values may be changed; however, you will be required to give an explanation of any change on the "Justification Sheet."

Parameter	Value	Units	Default	Units
Exposure Duration (ED)	25	years	25	years
Exposure Frequency (EF)	250	days/year	250	days/year
Ingestion Rate - Soil ($IngR_s$)	**100**	mg/day	50	mg/day
Ingestion Rate - Water ($IngR_w$)	1	l/day	1	l/day
Inhalation Rate - Air ($InhR_a$)	20	m^3/day	20	m^3/day
Exposed Skin Surface Area (SA_s)	3160	cm^2	3160	cm^2
Dilution Factor (DF)	20		20	
Fraction of Organic Carbon (surface) (f_{oc})	0.006	g/g	0.006	g/g
Fraction of Organic Carbon (subsurface) (f_{ocsb})	0.002	g/g	0.002	g/g
Total Soil Porosity (n)	0.434	l pore/l soil	0.434	l pore/l soil
Dry Soil Bulk Density (P_b)	1.5	kg/l	1.5	kg/l
Soil Particle Density (P_s)	2.65	g/cm^3	2.65	g/cm^3
Air Filled Soil Porosity Partitioning Model (θ_{ap})	0.134	l air/l soil	0.134	l air/l soil
Air Filled Soil Porosity - Volatilization (θ_{avf})	0.284	l air/l soil	0.284	l air/l soil
Water Filled Soil Porosity Partitioning Model (θ_{wp})	0.3	l water/l soil	0.3	l water/l soil
Water Filled Soil Porosity - Volatilization (θ_{wvf})	0.15	l water/l soil	0.15	l water/l soil

Step 3 - Justify your Changes

Please open the tab labeled "Justification Sheet." You will find a list of all the exposure assumptions that were changed along with their default values and the non-default value that you chose. Below that line you will find a large green box where you may enter text to justify changing that value. If this box does not provide enough space, please use it to provide a reference to another document that you are submitting to IDEM that fully explains the reasoning behind the change you are making.

Step 4 - Generate your Nondefault Industrial Closure Levels

After you click the "Generate Non-Default Closure Levels" button, the Non-Default Industrial Closure Tool will check the validity of your inputs and produce a report that you can print and include in your submission to IDEM.

Warning: There are only 3 Distinct Values in this data
There are insufficient Distinct Values to perform some GOF tests and bootstrap methods.
Those methods will return a 'N/A' value on your output display!
It is necessary to have 4 or more Distinct Values to compute bootstrap methods.
However, results obtained using 4 to 9 distinct values may not be reliable.
It is recommended to have 10-15 or more observations for accurate and meaningful bootstrap results.

Potential UCL to Use		
		Use 95% Chebyshev (Mean, Sd) UCL 147.7

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
These recommendations are based upon the results of the simulation studies summarized in Singh, Singh, and Iaci (2002) and Singh and Singh (2003). For additional insight, the user may want to consult a statistician.

GENERAL UCL STATISTICS - OFF-SITE GROUNDWATER
RFI REPORT
FORMER MANUAL TRANSMISSIONS OF MUNCIE FACILITY
MUNCIE, INDIANA

General UCL Statistics for Full Data Sets

User Selected Options

From File	C:\Users\alebeau\Documents\017324 Muncie, IN\Stats\Muncie_GW_Off_Site_.wst
Full Precision	OFF
Confidence Coefficient	95%
Number of Bootstrap Operations	2000

Manganese (dissolved)

General Statistics

Number of Valid Observations	7	Number of Distinct Observations	6

Raw Statistics		Log-transformed Statistics	
Minimum	240	Minimum of Log Data	5.481
Maximum	1400	Maximum of Log Data	7.244
Mean	425.7	Mean of log Data	5.809
Geometric Mean	333.2	SD of log Data	0.639
Median	260		
SD	430.3		
Std. Error of Mean	162.6		
Coefficient of Variation	1.011		
Skewness	2.629		

Warning: A sample size of 'n' = 7 may not adequate enough to compute meaningful and reliable test statistics and estimates!
It is suggested to collect at least 8 to 10 observations using these statistical methods!
If possible compute and collect Data Quality Objectives (DQO) based sample size and analytical results.
Warning: There are only 7 Values in this data
Note: It should be noted that even though bootstrap methods may be performed on this data set,
the resulting calculations may not be reliable enough to draw conclusions
The literature suggests to use bootstrap methods on data sets having more than 10-15 observations.

Empathy of Vaporization at average soil temperature $(\Delta H_{v,TS})^4$=	2.66E+04
Ratio $(Tb/Tc)^5$=	7.39E-01
n^5=	4.10E-01
Henry Law Constant $(H_R)^3$=	8.29E-07
Gas constant $(R_C)^6$=	1.99E+00
Gas Constant $(R)^6$=	8.21E-05
Henry Law Constant at average Soil Temp $(H'_{TS})^6$=	2.78E-03
Residential SL^7=	8.70E-02
Industrial SL^7=	1.10E+00
IDEM VI Residential Calculation[8] =	3.13E+01
IDEM VI Indsutrial Calculation[8] =	3.96E+02

Notes:
(1) From Section A 5.1: Residential Vapor Intrusion in IDEM, 2012.
(2) After equation 3 in USEPA, 2001.
(3) From Attachedment: Chemical Properties of Volatile SSl Chemicals as in USEPA, 2001.
(4) Equation 2 in USEPA, 2001.
(5) Table 1 in USEPA, 2001.
(6) Equation 1 in USEPA, 2001.
(7) Table A-6: Screening Levels Summary Table - March 2014 Screening Levels - Final - IDEM RCG.
(8) Equation 10 in Section A 5.1 Residential Vapor Intrusion as in IDEM, 2012.

Bold Outline denotes COPC-Specific chemical properties.

VAPOR INTRUSTION SSSL DERIVATION FOR TRANS-1,2-DICHLOROETHENE
RFI REPORT
FORMER MANUAL TRANSMISSIONS OF MUNCIE FACILITY
MUNCIE, INDIANA

Average temperature of Shallow GW (˚F) (T_A)[1]=	5.45E+01
Average Soil Temperature (˚K) (T_S)[2]=	3.32E+02
Normal Boiling Point (T_B)[3]=	3.21E+02
Critical Temperature (T_C)[3]=	5.17E+02
Empathy of Vaporization at normal boiling point ($\Delta H_{V,B}$)[3]=	6.72E+03
Henry Law Constant reference Temp (˚K) (T_R)[3]=	2.98E+02
Empathy of Vaporization at average soil temperature ($\Delta H_{v,TS}$)[4]=	6.59E+03
Ratio (Tb/Tc)[5]=	6.21E-01
n[5]=	3.44E-01
Henry Law Constant (H_R)[3]=	9.39E-03
Gas constant (R_C)[6]=	1.99E+00
Gas Constant (R)[6]=	8.21E-05
Henry Law Constant at average Soil Temp (H'_{TS})[6]=	1.06E+00
Residential SL[7]=	6.30E+01
Industrial SL[7]=	2.60E+02
IDEM VI Residential Calculation[8] =	5.96E+01
IDEM VI Indsutrial Calculation[8] =	2.46E+02
