Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.6/1.8
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	MS or MSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6420-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 12/01/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 and 2.6 C.

TCLP METALS (ICP)

Sample S-17302-112911-DN-145 (240-6420-5) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/ 6010B. The samples were leached on 12/13/2011, prepared on 12/14/2011 and analyzed on 12/15/2011.

Barium and Selenium were detected in method blank LB 240-26731/1-C at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the metals analysis.

All other quality control parameters were within the acceptance limits.

TOTAL METALS (ICP)

Job ID: 240-6420-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

Samples S-17302-112911-DN-131 (240-6420-1), S-17302-112911-DN-132 (240-6420-2), S-17302-112911-DN-133 (240-6420-3) and S-17302-112911-DN-134 (240-6420-4) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 12/07/2011 and analyzed on 12/08/2011 and 12/09/2011.

Several analytes were detected in method blank MB 240-25839/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Antimony and Calcium failed the recovery criteria low for the MS of sample S-17302-112911-DN-131MS (240-6420-1) in batch 240-26136. Aluminum, Chromium, Iron and Manganese failed the recovery criteria high.

Antimony failed the recovery criteria low for the MSD of sample S-17302-112911-DN-131MSD (240-6420-1) in batch 240-26136. Aluminum, Chromium, Iron and Manganese failed the recovery criteria high.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TCLP MERCURY

Sample S-17302-112911-DN-145 (240-6420-5) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 12/13/2011, and prepared and analyzed on 12/14/2011.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples S-17302-112911-DN-131 (240-6420-1), S-17302-112911-DN-132 (240-6420-2), S-17302-112911-DN-133 (240-6420-3) and S-17302-112911-DN-134 (240-6420-4) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 12/08/2011 and analyzed on 12/12/2011.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Samples S-17302-112911-DN-131 (240-6420-1), S-17302-112911-DN-132 (240-6420-2), S-17302-112911-DN-133 (240-6420-3) and S-17302-112911-DN-134 (240-6420-4) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The samples were prepared on 12/16/2011 and analyzed on 12/19/2011.

Sample S-17302-112911-DN-131 (240-6420-1)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the hexavalent chromium analyses.

All quality control parameters were within the acceptance limits.

TOTAL AND AMENABLE CYANIDE

Samples S-17302-112911-DN-131 (240-6420-1), S-17302-112911-DN-132 (240-6420-2), S-17302-112911-DN-133 (240-6420-3) and S-17302-112911-DN-134 (240-6420-4) were analyzed for total and amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 12/08/2011 and 12/09/2011.

Job ID: 240-6420-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

Samples S-17302-112911-DN-132 (240-6420-2)[5X] and S-17302-112911-DN-133 (240-6420-3)[5X] required dilution prior to analysis.
The reporting limits have been adjusted accordingly.

No difficulties were encountered during the cyanide analyses.

All quality control parameters were within the acceptance limits.

Definitions/Glossary

Client: Conestoga-Rovers & Associates, Inc.
Project/Site: 17302-T06, RACER Delphi Anderson

TestAmerica Job ID: 240-6719-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica North Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6719-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/09/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.6 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples GW-17302-120811-EM-001 (240-6719-1), GW-17302-120811-EM-002 (240-6719-2) and TB-17302-120811-EM (240-6719-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/14/2011.

Acetone was detected in method blank MB 240-26736/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,4-Dichlorobenzene failed the recovery criteria low for the MSD of sample GW-17302-120811-EM-001MSD (240-6719-1) in batch 240-26736.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6732-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/09/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.6 C.

TCLP VOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample S-17302-120811-EM-003 (240-6732-1) was analyzed for TCLP volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 12/14/2011 and analyzed on 12/16/2011.

No difficulties were encountered during the VOCs analysis.

All quality control parameters were within the acceptance limits.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Sample S-17302-120811-EM-003 (240-6732-1) was analyzed for TCLP semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 1311/8270C. The samples were leached on 12/14/2011, prepared on 12/15/2011 and analyzed on 12/16/2011.

No difficulties were encountered during the SVOCs analysis.

All quality control parameters were within the acceptance limits.

Job ID: 240-6732-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

TCLP METALS (ICP)

Sample S-17302-120811-EM-003 (240-6732-1) was analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/6010B. The samples were leached on 12/14/2011, prepared on 12/15/2011 and analyzed on 12/19/2011.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

TCLP MERCURY

Sample S-17302-120811-EM-003 (240-6732-1) was analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 12/14/2011, prepared on 12/15/2011 and analyzed on 12/16/2011.

No difficulties were encountered during the mercury analysis.

All quality control parameters were within the acceptance limits.

RE: **Analytical Results and QA/QC Review**
Soil and Groundwater Investigation
Former Delphi I Anderson Facility
Anderson, Indiana
November-December 2011

INTRODUCTION

Soil and groundwater samples, including several field duplicates, were collected during November - December 2011 at the Former Delphi I Anderson Facility in Anderson, Indiana. The analytical services were provided by TestAmerica, Inc. in North Canton, Ohio.

The samples were submitted for analysis of volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), polychlorinated biphenyls (PCBs), metals, mercury, hexavalent chromium, total cyanide and amenable cyanide. A sampling and analysis summary is presented in Table 1. Summaries of the results are presented in Tables 2A and 2B. The analytical methods used are summarized in Table 3.

The evaluation of the data was based on information obtained from the Chain of Custody forms, finished report forms, blank data, duplicate data, and recovery data for matrix, blank, and surrogate spikes.

The QC criteria used to assess the data were established by the methods and following documents:

i) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99/008, October 1999.

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994.

QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) REVIEW

All samples were properly preserved during transport and storage. All samples were received at the laboratory in good condition. Upon receipt at the laboratory, preservation by freezing for some soil VOC samples was not done within the 48 hours from time of collection. All associated volatile results were qualified as estimated based on the potential low bias (see Table 4).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

All samples were analyzed within the recommended holding times with the exception of some non-amenable cyanide samples which required re-analysis outside of hold time. As the non-amenable results are used to calculate the amenable results, all associated amenable cyanide results were qualified as estimated based on the hold time exceedance (see Table 5).

Method blanks were extracted and/or analyzed with the investigative samples for all parameters. The method blank results were non-detect for all of the analytes of interest with the exception of low concentrations of some volatile compounds and metals. All associated samples with similar results were qualified as non-detect (see Table 6). Samples with significantly higher concentrations than those found in the blank did not require qualification.

All VOC, SVOC and PCB samples, blanks, and QC samples were spiked with the appropriate surrogate compounds prior to sample extraction and/or analysis. All surrogate recoveries were acceptable, with the exception of one SVOC sample, which was diluted out and could not be assessed, and a volatile sample with one high surrogate recovery. All positive sample results associated with the high recovery were qualified as estimated (see Table 7); non-detect results would not be impacted by the implied high bias.

Matrix spike (MS) or matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on the samples as shown in Table 1. All spike recoveries and relative percent difference (RPD) were within the laboratory control limits, with the following exceptions:

i) High 1,1,2,2-tetrachloroethane recoveries were reported for one volatile MS/MSD. The associated result was non-detect and would not be impacted by the indicated high bias.

ii) Severely low recoveries, or no recoveries, were reported for some SVOCs and metals. All associated positive results were qualified as estimated and non-detect results were rejected based on the poor analytical efficiency (see Table 8).

iii) All metal MS/MSD samples had some metals that were significantly higher in concentration than the spike and could not be assessed for precision and accuracy.

iv) Cyanide was significantly greater in concentration than the spike in one of the MS/MSD samples and could not be assessed.

v) Some low metals recoveries and /or RPD were reported for antimony, barium, and lead. All associated samples were qualified as estimated based on the indicated low bias (see Table 8).

vi) High mercury recoveries were reported for one MS/MSD. All associated positive results were qualified as estimated (see Table 8); non-detects would not be impacted by the implied high bias.

Laboratory control samples (LCS) or laboratory control sample/laboratory control sample duplicates (LCS/LCSD) were analyzed at the required frequency. All recoveries and RPD were within the laboratory control limits with the exception of some high VOC recoveries in one of the volatile LCS. All associated sample results were non-detect and would not be impacted by the indicated high bias.

Field duplicate samples were collected and submitted "blind" to the laboratory as shown in Table 1. All data demonstrated acceptable agreement, indicating good field and analytical precision, with the exception of various metals, amenable cyanide, total cyanide and one volatile compound. All associated sample results were qualified as estimated based on the indicated variability (see Table 9).

A trip blank was transported, stored, and analyzed with the VOC samples as shown in Table 1. The blank results were non-detect for the compounds of interest with the exception of a low concentration of acetone. An associated sample with a similar concentration was previously qualified as non-detect due to method blank contamination and did not require further qualification.

CONCLUSION

Based on the preceding review, the analytical data summarized in Table 2 are acceptable with the exceptions and qualifications noted.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T11, RACER Delphi Anderson

Report Number: 240-23959-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 05/03/2013 and 05/08/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9 and 3.6 C.

DISSOLVED METALS (ICP)

Sample GW-050713-SM-006 (240-24142-1) was analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. Samples GW-050213-SM-001 (240-23959-1), GW-050213-SM-002 (240-23959-2), GW-050213-SM-003 (240-23959-3), GW-050213-SM-004 (240-23959-4), GW-050213-SM-005 (240-23959-5) and EB-050213-SM-001 (240-23959-6) were analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 05/06/2013 and 05/09/2013 and analyzed on 05/07/2013 and 05/10/2013.

Zinc was detected in method blanks 240-85264/1-A and 240-84769/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

DISSOLVED HEXAVALENT CHROMIUM

Job ID: 240-23959-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Sample GW-050713-SM-006 (240-24142-1) was analyzed for Dissolved hexavalent chromium in accordance with EPA SW-846 Method 7196A. Samples GW-050213-SM-001 (240-23959-1), GW-050213-SM-002 (240-23959-2), GW-050213-SM-003 (240-23959-3), GW-050213-SM-004 (240-23959-4), GW-050213-SM-005 (240-23959-5) and EB-050213-SM-001 (240-23959-6) were analyzed for Dissolved hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were analyzed on 05/03/2013 and 05/08/2013.

Cr (VI) failed the recovery criteria low for the MS of sample GW-050713-SM-006MS (240-24142-1) in batch 240-85159.

No other difficulties were encountered during the hexavalent chromium analysis.

All other quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Sample GW-050713-SM-006 (240-24142-1) was analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. Samples GW-050213-SM-001 (240-23959-1), GW-050213-SM-002 (240-23959-2), GW-050213-SM-003 (240-23959-3), GW-050213-SM-004 (240-23959-4), GW-050213-SM-005 (240-23959-5) and EB-050213-SM-001 (240-23959-6) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 05/08/2013, 05/10/2013 and 05/14/2013.

Samples GW-050213-SM-003 (240-23959-3)[30X] and GW-050213-SM-004 (240-23959-4)[30X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the cyanide analyses.

All other quality control parameters were within the acceptance limits.

AMENABLE CYANIDE

Sample GW-050713-SM-006 (240-24142-1) was analyzed for amenable cyanide in accordance with EPA SW-846 Method 9012A. Samples GW-050213-SM-001 (240-23959-1), GW-050213-SM-002 (240-23959-2), GW-050213-SM-003 (240-23959-3), GW-050213-SM-004 (240-23959-4), GW-050213-SM-005 (240-23959-5) and EB-050213-SM-001 (240-23959-6) were analyzed for amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were analyzed on 05/22/2013.

No difficulties were encountered during the amenable cyanide analyses.

All quality control parameters were within the acceptance limits.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T11, RACER Delphi Anderson

Report Number: 240-26464-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/03/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

Cyanide results will be found in job: 240-26264-2.

Per email; the samples should also be tested for dissolved hexavalent chromium; a revised chain of custody was not provided.

DISSOLVED METALS (ICP)

Samples GW-070213-SM-001 (240-26464-1), GW-070213-SM-002 (240-26464-2), GW-070213-SM-003 (240-26464-3), GW-070213-SM-004 (240-26464-4) and GW-070213-SM-005 (240-26464-5) were analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 07/03/2013 and analyzed on 07/05/2013.

Lead was detected in method blank MB 240-92510/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

Job ID: 240-26464-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

DISSOLVED HEXAVALENT CHROMIUM

Samples GW-070213-SM-001 (240-26464-1), GW-070213-SM-002 (240-26464-2), GW-070213-SM-003 (240-26464-3), GW-070213-SM-004 (240-26464-4) and GW-070213-SM-005 (240-26464-5) were analyzed for dissolved hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were analyzed on 07/03/2013.

No difficulties were encountered during the hexavalent chromium analysis.

All quality control parameters were within the acceptance limits.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T11, RACER Delphi Anderson

Report Number: 240-26464-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/03/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

TOTAL CYANIDE

Samples GW-070213-SM-001 (240-26464-1), GW-070213-SM-002 (240-26464-2), GW-070213-SM-003 (240-26464-3), GW-070213-SM-004 (240-26464-4) and GW-070213-SM-005 (240-26464-5) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 07/08/2013.

Sample GW-070213-SM-001 (240-26464-1)[100X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the cyanide analysis.

All quality control parameters were within the acceptance limits.

AMENABLE CYANIDE

Samples GW-070213-SM-001 (240-26464-1), GW-070213-SM-002 (240-26464-2), GW-070213-SM-003 (240-26464-3), GW-070213-SM-004 (240-26464-4) and GW-070213-SM-005 (240-26464-5) were analyzed for amenable cyanide in accordance with EPA

Job ID: 240-26464-2 (Continued)

Laboratory: TestAmerica Canton (Continued)

SW-846 Method 9012A. The samples were analyzed on 07/11/2013.

No difficulties were encountered during the amenable cyanide analysis.

All quality control parameters were within the acceptance limits.

Qualifiers

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
F	MS or MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T11, RACER Delphi Anderson

Report Number: 240-26599-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.8 C.

Cyanide results can be found in job series 2: 240-26599-2.

DISSOLVED METALS (ICP)

Sample GW-070813-SM-006 (240-26599-1) was analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 07/10/2013 and analyzed on 07/11/2013.

Zinc was detected in method blank MB 240-93119/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

DISSOLVED HEXAVALENT CHROMIUM

Sample GW-070813-SM-006 (240-26599-1) was analyzed for dissolved hexavalent chromium in accordance with EPA SW-846 Method

Job ID: 240-26599-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

7196A. The samples were analyzed on 07/09/2013.

Cr (VI) failed the recovery criteria low for the MS/MSD of sample GW-070813-SM-006MS (240-26599-1) in batch 240-92983. Upon addition of color reagent the top of the associated sample turned purple for a brief moment before returning to clear. No recovery was obtained for the MS and MSD. The LCS is acceptable.

No other difficulties were encountered during the hexavalent chromium analysis.

All other quality control parameters were within the acceptance limits.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T11, RACER Delphi Anderson

Report Number: 240-26599-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/09/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.8 C.

TOTAL CYANIDE

Sample GW-070813-SM-006 (240-26599-1) was analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 07/15/2013.

No difficulties were encountered during the cyanide analysis.

All quality control parameters were within the acceptance limits.

AMENABLE CYANIDE

Sample GW-070813-SM-006 (240-26599-1) was analyzed for amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were analyzed on 07/16/2013.

No difficulties were encountered during the amenable cyanide analysis.

Job ID: 240-26599-2 (Continued)

Laboratory: TestAmerica Canton (Continued)

All quality control parameters were within the acceptance limits.

RE: Analytical Results and QA/QC Review
Perched Groundwater Delineation
RACER Trust - Former Delphi I Anderson Facility
Anderson, Indiana
May 2013

INTRODUCTION

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Perched Groundwater Delineation sampling at the Former Delphi I Anderson Facility during May 2013. Samples were submitted to TestAmerica Laboratory, located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and the document entitled "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", February 1994, USEPA 540/R 94/013, subsequently be referred to as the "Guidelines".

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria for the analyses are summarized in the methods. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved and delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

All method blank results were non-detect, with the exception of low concentrations of zinc. An associated sample with a similar result was qualified as non-detect (see Table 4).

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per analytical batch.

Inorganic LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the established control limits, indicating acceptable overall laboratory performance.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1. The laboratory performed an additional site-specific MS for the dissolved hexavalent chromium analysis internally.

All spike recoveries and relative percent differences (RPD) were within the laboratory control limits, with the exceptions of a low MS for one of the dissolved hexavalent chromium samples. The associated sample result was not qualified based on the acceptable MSD recovery and RPD.

FIELD QA/QC

The field QA/QC samples consisted of 1 equipment rinse blank and 1 field duplicate sample set.

Equipment Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the site, and cleanliness of sample containers, a rinse blank was submitted for analysis, as identified in Table 1. All results were non-detect for the analytes of interest.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the practical quantitation limit (PQL) but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica Laboratory were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted.

RE: **Analytical Results and QA/QC Review**
Perched Groundwater Delineation
RACER Trust - Former Delphi I Anderson Facility
Anderson, Indiana
July 2013

INTRODUCTION

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Perched Groundwater Delineation sampling at the Former Delphi I Anderson Facility during July 2013. Samples were submitted to TestAmerica Laboratory, located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from laboratory control samples (LCS), and matrix spikes.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and the document entitled "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", February 1994, USEPA 540/R 94/013, subsequently be referred to as the "Guidelines".

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria for the analyses are summarized in the methods. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times with the exception of two hexavalent chromium samples. The associated sample results were qualified as estimated (see Table 4).

All samples were properly preserved and delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

All method blank results were non-detect, with the exception of low concentrations of zinc and lead. An associated sample with a similar result was qualified as non-detect (see Table 5).

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per analytical batch.

Inorganic LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the established control limits, indicating acceptable overall laboratory performance.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

All spike recoveries and RPDs were within the laboratory control limits, with the exception of zero percent recoveries reported for the hexavalent chromium MS/MSD analysis. Based on the sample eH/pH data, the sample has reducing potential, which likely caused the hexavalent chromium spike addition to convert to trivalent chromium prior to analysis. Based on this, the associated data was judged usable but was qualified as estimated (See Table 6).

FIELD QA/QC

The field QA/QC samples consisted of 1 field duplicate sample set.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the practical quantitation limit (PQL) but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica Laboratory were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted.

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
4	MS, MSD: The analyte present in the original sample is 4 times greater than the matrix spike concentration; therefore, control limits are not applicable.
F	MS or MSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 240-12996-1

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-12996-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 07/06/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.0 C.

A revised chain of custody was received on July 10, 2012.

TOTAL METALS (ICP)

Samples S-017302-070212-SM-001 (240-12996-1), S-017302-070212-SM-002 (240-12996-2), S-017302-070212-SM-003 (240-12996-3), S-017302-070212-SM-004 (240-12996-4), S-017302-070212-SM-005 (240-12996-5), S-017302-070212-SM-006 (240-12996-6), S-017302-070212-SM-007 (240-12996-7), S-017302-070212-SM-008 (240-12996-8), S-017302-070212-SM-009 (240-12996-9), S-017302-070212-SM-010 (240-12996-10), S-017302-070212-SM-011 (240-12996-11), S-017302-070512-SM-012 (240-12996-12), S-017302-070512-SM-013 (240-12996-13), S-017302-070512-SM-014 (240-12996-14), S-017302-070512-SM-015 (240-12996-15), S-017302-070512-SM-016 (240-12996-16), S-017302-070512-SM-017 (240-12996-17), S-017302-070512-SM-018 (240-12996-18), S-017302-070512-SM-019 (240-12996-19), S-017302-070512-SM-020 (240-12996-20), S-017302-070512-SM-021 (240-12996-21), S-017302-070512-SM-024 (240-12996-24) and S-017302-070512-SM-025 (240-12996-25) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 07/11/2012 and analyzed on 07/12/2012, 07/16/2012 and 07/17/2012.

Several analytes were detected in method blank MB 240-50487/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above

Job ID: 240-12996-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

the MDL and/or RL, the result has been “B” flagged.

Antimony, Copper, Iron and Nickel failed the recovery criteria low for the MS of sample S-017302-070212-SM-011MS (240-12996-11) in batch 240-50963. Aluminum and Calcium failed the recovery criteria high.

For the MSD of sample S-017302-070212-SM-011MSD (240-12996-11) in batch 240-50963, Aluminum, Antimony and Iron failed the recovery criteria low. Several analytes failed the recovery criteria high. Also, Aluminum, Copper, Magnesium and Nickel exceeded the rpd limit.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Samples S-017302-070212-SM-002 (240-12996-2)[5X] and S-017302-070512-SM-015 (240-12996-15)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples S-017302-070212-SM-001 (240-12996-1), S-017302-070212-SM-002 (240-12996-2), S-017302-070212-SM-003 (240-12996-3), S-017302-070212-SM-004 (240-12996-4), S-017302-070212-SM-005 (240-12996-5), S-017302-070212-SM-006 (240-12996-6), S-017302-070212-SM-007 (240-12996-7), S-017302-070212-SM-008 (240-12996-8), S-017302-070212-SM-009 (240-12996-9), S-017302-070212-SM-010 (240-12996-10) and S-017302-070212-SM-011 (240-12996-11) were analyzed for total mercury in accordance with EPA SW-846 Method 7471A. The samples were prepared on 07/11/2012 and analyzed on 07/12/2012.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Samples S-017302-070212-SM-001 (240-12996-1), S-017302-070212-SM-002 (240-12996-2), S-017302-070212-SM-003 (240-12996-3), S-017302-070212-SM-004 (240-12996-4), S-017302-070212-SM-005 (240-12996-5), S-017302-070212-SM-006 (240-12996-6), S-017302-070212-SM-007 (240-12996-7), S-017302-070212-SM-008 (240-12996-8), S-017302-070212-SM-009 (240-12996-9), S-017302-070212-SM-010 (240-12996-10), S-017302-070212-SM-011 (240-12996-11), S-017302-070512-SM-022 (240-12996-22) and S-017302-070512-SM-023 (240-12996-23) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 3060A/7196A. The samples were prepared on 07/11/2012 and analyzed on 07/12/2012.

Samples S-017302-070212-SM-001 (240-12996-1)[5X] and S-017302-070512-SM-023 (240-12996-23)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No difficulties were encountered during the hexavalent chromium analyses.

All quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Samples S-017302-070212-SM-001 (240-12996-1), S-017302-070212-SM-002 (240-12996-2), S-017302-070212-SM-003 (240-12996-3), S-017302-070212-SM-004 (240-12996-4), S-017302-070212-SM-005 (240-12996-5), S-017302-070212-SM-006 (240-12996-6), S-017302-070212-SM-007 (240-12996-7), S-017302-070212-SM-008 (240-12996-8), S-017302-070212-SM-009 (240-12996-9), S-017302-070212-SM-010 (240-12996-10) and S-017302-070212-SM-011 (240-12996-11) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 07/13/2012.

Cyanide, Total was detected in method blank MB 240-50710/3-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

Job ID: 240-12996-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Sample S-017302-070212-SM-010 (240-12996-10)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the cyanide analyses.

All other quality control parameters were within the acceptance limits.

AMENABLE CYANIDE

Samples S-017302-070212-SM-001 (240-12996-1), S-017302-070212-SM-002 (240-12996-2), S-017302-070212-SM-003 (240-12996-3), S-017302-070212-SM-004 (240-12996-4), S-017302-070212-SM-005 (240-12996-5), S-017302-070212-SM-006 (240-12996-6), S-017302-070212-SM-007 (240-12996-7), S-017302-070212-SM-008 (240-12996-8), S-017302-070212-SM-009 (240-12996-9), S-017302-070212-SM-010 (240-12996-10) and S-017302-070212-SM-011 (240-12996-11) were analyzed for amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were analyzed on 07/16/2012.

No difficulties were encountered during the amenable cyanide analyses.

All quality control parameters were within the acceptance limits.

Creator: Sutek, Nick

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Qualifiers

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
H	Sample was prepped or analyzed beyond the specified holding time
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
MDA	Minimum detectable activity
MDC	Minimum detectable concentration
RER	Relative error ratio
DER	Duplicate error ratio (normalized absolute difference)
DLC	Decision level concentration
RL	Reporting Limit or Requested Limit (Radiochemistry only)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-16885-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 10/27/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the cooler at receipt was 3.0 C.

The chain of custody indicates TAL Metals; this is incorrect. Per the SSOW, it should be SSPL Metals.

DISSOLVED METALS (ICP)

Samples GW-102612-SM-001 (240-16885-2), GW-102612-SM-002 (240-16885-3) and GW-102612-SM-003 (240-16885-4) were analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 10/29/2012 and analyzed on 10/30/2012.

No difficulties were encountered during the metals analyses.

All quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Samples GW-102412-SM-001 (240-16885-1), GW-102612-SM-002 (240-16885-3) and GW-102612-SM-003 (240-16885-4) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 10/29/2012 and 10/30/2012 and analyzed on 10/30/2012 and 10/31/2012.

Job ID: 240-16885-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Lead and Zinc were detected in method blank MB 240-63067/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Zinc was detected in method blank MB 240-63104/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Zinc was detected in method blank MB 240-63178/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Samples GW-102612-SM-001 (240-16885-2), GW-102612-SM-002 (240-16885-3) and GW-102612-SM-003 (240-16885-4) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were analyzed on 10/27/2012.

Samples GW-102612-SM-001 (240-16885-2)[10X], GW-102612-SM-002 (240-16885-3)[5X] and GW-102612-SM-003 (240-16885-4)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The following sample was received with greater than 50% of holding time expired: GW-102612-SM-001 (240-16885-2). As such, the laboratory had insufficient time remaining to perform the analysis within holding time. Data is reported.

No other difficulties were encountered during the hexavalent chromium analyses.

All quality control parameters were within the acceptance limits.

TOTAL CYANIDE

Samples GW-102412-SM-001 (240-16885-1), GW-102612-SM-002 (240-16885-3) and GW-102612-SM-003 (240-16885-4) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared on 10/30/2012 and analyzed on 10/30/2012 and 10/31/2012.

Sample GW-102412-SM-001 (240-16885-1)[200X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with batch 63289 were outside control limits: GW-102612-SM-002 (240-16885-3). The associated laboratory control sample (LCS) recovery met acceptance criteria.

No other difficulties were encountered during the cyanide analyses.

All quality control parameters were within the acceptance limits.

AMENABLE CYANIDE

Samples GW-102412-SM-001 (240-16885-1), GW-102612-SM-002 (240-16885-3) and GW-102612-SM-003 (240-16885-4) were analyzed for amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were analyzed on 10/31/2012.

No difficulties were encountered during the amenable cyanide analyses.

All quality control parameters were within the acceptance limits.

RE: **Analytical Results and QA/QC Review**
Soil and Perched Groundwater Delineation
Former Delphi I Anderson Facility
Anderson, Indiana
July-October 2012

INTRODUCTION

Soil and groundwater samples were collected in support of the Soil and Perched Groundwater Delineation event at the Former Delphi I Anderson Facility in Anderson, Indiana during July and October. Samples were submitted to TestAmerica Laboratories (Laboratory), located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2. The validated analytical results are summarized in Tables 3A, 3B and 3C.

Standard CRA report deliverables were reported by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from laboratory control samples (LCS), and matrix spikes; and field QA/QC samples. The QA/QC criteria by which the data have been assessed are outlined in the respective methods and the document entitled "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", February 1994, USEPA 540/R 94/013, subsequently be referred to as the "Guidelines".

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

The purpose of assessing the results of laboratory method blank analyses is to determine the existence and magnitude of sample contamination introduced during analysis. Laboratory method blanks are prepared from a certified analyte-free matrix and analyzed with the samples.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch. All method blank results were non-detect for the analytes of interest with the exception of low concentrations of metals and cyanide in some of the blanks. All associated samples with similar results were qualified as non-detect (see Table 4).

LABORATORY CONTROL SAMPLE ANALYSES

LCS analyses serve as a monitor of the overall performance of all steps in the analysis, including the sample preparation. LCS were analyzed using the same sample preparation, analytical methods, and QA/QC procedures employed for the investigative samples. Inorganic LCS recoveries were assessed per the "Guidelines".

All LCS recoveries were within the established control limits, indicating acceptable overall laboratory performance.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the preparation, measurement procedures, and accuracy of a particular analysis, samples are spiked in duplicate with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. Inorganic MS/MSD recoveries were assessed per the "Guidelines".

MS/MSD analyses were performed as specified in Table 1. Per the "Guidelines", spike recoveries were not assessed for samples having original concentrations significantly greater than the spike concentration (>four times).

All spike recoveries and relative percent differences (RPD) were within the laboratory control limits, with the following exceptions (see Table 5):

i) Some low MS and high MSD recoveries were reported for sample S-17302-070212-SM-011. All associated results were qualified as estimated based on the extremely variable results.

ii) Low antimony MS/MSD recoveries were reported for sample S-17302-070212-SM-011. All results were qualified as estimated based on the indicated low bias.

iii) Some metals for sample S-17302-070212-SM-011 were significantly higher in concentration than the spike and could not be assessed for precision and accuracy.

FIELD QA/QC

The field QA/QC samples consisted of three field duplicate sample sets.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 35 and 50 percent for water and soil samples, respectively. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one or two times the RL value for water and soil samples, respectively.

All field duplicate results were within acceptable agreement, demonstrating good sampling and analytical precision, with the exception of lead in one of the field duplicates. The associated sample results were qualified as estimated based on the indicated variability (see Table 6).

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the practical quantitation limit (PQL) but greater than the method detection limit (MDL) were qualified as estimated (J) in Table 3 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 3.

All soil results were reported on a dry weight basis and all dry weights were greater than 50 percent.

CONCLUSION

Based on this assessment, the data produced by (Laboratory) were found to exhibit acceptable levels of accuracy and precision based on the provided information and may be used with the qualifications noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 240-21403-1

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-21403-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/26/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.1 C.

Samples were taken off hold by CRA on March 5, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-017302-022513-TP-001 (240-21403-1), S-017302-022513-TP-002 (240-21403-2), S-017302-022513-TP-003 (240-21403-3) and S-017302-022513-TP-004 (240-21403-4) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/26/2013 and analyzed on 02/27/2013.

1,2,4-Trichlorobenzene, 2-Butanone (MEK) and Methylene Chloride were detected in method blank MB 240-76637/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Internal standard (ISTD) response for the following samples were outside control limits: S-017302-022513-TP-001 (240-21403-1), S-017302-022513-TP-004 (240-21403-4). The samples were re-analyzed with concurring results. The original set of data has been reported.

Surrogate recovery for the following sample was outside the upper control limit: S-017302-022513-TP-004 (240-21403-4). This sample

Job ID: 240-21403-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

did not contain any reportable target analytes; therefore, re-extraction and/or re-analysis was not performed.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F	MS or MSD exceeds the control limits
F	RPD of the MS and MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-21453-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/27/2013; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.8 C.

Samples were taken off hold for VOC analysis by CRA on March 5, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-017302-022613-SM-005 (240-21453-1), S-017302-022613-SM-006 (240-21453-2) and S-017302-022613-SM-007 (240-21453-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/27/2013 and analyzed on 02/28/2013.

Methylene Chloride was detected in method blank MB 240-76720/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

cis-1,2-Dichloroethene failed the recovery criteria low for the MS of sample S-017302-022613-SM-005MS (240-21453-1) in batch 240-76720.

2-Hexanone exceeded the rpd limit for the MSD of sample S-017302-022613-SM-005MSD (240-21453-1) in batch 240-76720.

Job ID: 240-21453-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Internal standard responses were outside of acceptance limits for the following sample: S-017302-022613-SM-006 (240-21453-2). The sample shows evidence of matrix interference.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-21499-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 02/28/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 0.7º C and 2.4º C.

Samples were taken off hold by CRA on March 5, 2013. A revised chain of custody was not provided.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-017302-022713-SM-008 (240-21499-1), S-017302-022713-SM-009 (240-21499-2), S-017302-022713-SM-010 (240-21499-3), S-017302-022713-SM-011 (240-21499-4) and S-017302-022713-SM-012 (240-21499-5) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 02/28/2013 and analyzed on 03/06/2013.

Acetone was detected in method blank MB 240-77361/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Internal standard responses were outside of acceptance limits for the following sample: S-017302-022713-SM-010 (240-21499-3). The sample shows evidence of matrix interference.

No other difficulties were encountered during the VOCs analyses.

Job ID: 240-21499-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

All other quality control parameters were within the acceptance limits.

RE: Analytical Results and QA/QC Review
Wastewater Treatment Plant Source Investigation Soils
Former Delphi I Anderson Facility
Anderson, Indiana
February 2013

INTRODUCTION

The following document details a reduced validation of analytical results for soil samples collected in support of the Wastewater Treatment Plant Source Investigation at the Anderson, Indiana Site during February 2013. Samples were submitted to the TestAmerica Laboratory located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from surrogate spikes, laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical method referenced in Table 3 and the document entitled "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review," February 1994, USEPA 540/R 94/013, subsequently referred to as the "Guidelines".

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria for the analyses are summarized in the method. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per analytical batch.

All method blank results were non-detect, with the exception of low level concentrations for some volatile compounds. All associated samples with similar results were qualified as non-detect (see Table 4).

SURROGATE SPIKE RECOVERIES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for volatiles are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met criteria with the exception of one high surrogate recovery for S-017302-022513-TP-004. All associated results were previously qualified as estimated by the laboratory and did not require further qualification; non-detect results would not be impacted by the implied high bias.

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of one per analytical batch.

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1. The MS/MSD samples were spiked with all compounds of interest. All percent recoveries and RPD values were within the laboratory control limits, with the exception of a low cis-1,2-dichloroethane MS recovery. As only the MS was outside of control limits, no qualification of the data was performed based on the acceptable recovery of the companion spike and acceptable RPD.

FIELD QA/QC

The field QA/QC samples consisted of one field duplicate sample set.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, the field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these soil duplicate samples must be less than 100 percent. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is two times the RL value for soil samples.

All field duplicate results were within acceptable agreement, demonstrating good sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the practical quantitation limit (PQL) but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 3.

All soil results were reported on a dry weight basis.

CONCLUSION

Based on this assessment, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision based on the provided information and may be used with the qualifications noted.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	LCS or LCSD exceeds the control limits
F	MS/MSD Recovery and/or RPD exceeds the control limits

GC VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

Metals

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
F	MS/MSD Recovery and/or RPD exceeds the control limits
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-31465-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 11/14/2013 and 11/15/2013; the samples arrived in good condition, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 2.0º C, 3.8º C and 3.8º C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), TB-111313-TP-001 (240-31465-3), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4), GW-111413-TP-008 (240-31530-5) and TB-111413-TP-002 (240-31530-6) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 11/22/2013, 11/24/2013 and 11/25/2013.

1,1,2-Trichloro-1,2,2-trifluoroethane failed the recovery criteria low for the MS of sample GW-111413-TP-006MS (240-31530-3) in batch 240-111271.

Toluene failed the recovery criteria low for the MSD of sample GW-111413-TP-006MSD (240-31530-3) in batch 240-111271.

Samples GW-111313-TP-001 (240-31530-1)[200X], GW-111313-TP-002 (240-31530-2)[200X], GW-111413-TP-007 (240-31530-4) [166.67X] and GW-111413-TP-008 (240-31530-5)[200X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Job ID: 240-31465-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

The laboratory control sample (LCS) for batches 111070 and 111206 recovered outside control limits for the following analyte: Dichlorodifluoromethane. This analyte has been identified as a poor performing analyte when analyzed using this method; therefore, re-extraction/re-analysis was not performed.

There was no MS/MSD run in batch 111206 due to instrument failure.

The laboratory control sample (LCS) for batch 26401 recovered outside control limits for multiple analytes. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data has been reported.

No other difficulties were encountered during the VOCs analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED GASES

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for dissolved gases in accordance with RSK_175. The samples were analyzed on 11/15/2013 and 11/16/2013.

Methane was detected in method blank MB 240-109950/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Methane was detected in method blank MB 240-110133/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with batch 240-109950.

No other difficulties were encountered during the dissolved gases analysis.

All other quality control parameters were within the acceptance limits.

DISSOLVED METALS (ICP)

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for dissolved metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 11/18/2013 and analyzed on 11/19/2013.

No difficulties were encountered during the metals analysis.

All quality control parameters were within the acceptance limits.

ALKALINITY

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for alkalinity in accordance with SM 2320B. The samples were analyzed on 11/25/2013.

Bicarbonate Alkalinity as CaCO3 was detected in method blank MB 240-111399/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

No other difficulties were encountered during the alkalinity analysis.

Job ID: 240-31465-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

All other quality control parameters were within the acceptance limits.

HARDNESS

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for hardness in accordance with SM 2340C. The samples were analyzed on 11/19/2013.

No difficulties were encountered during the hardness analysis.

All quality control parameters were within the acceptance limits.

ANIONS

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for anions in accordance with EPA Method 300.0. The samples were analyzed on 11/14/2013, 11/15/2013 and 11/21/2013.

Sulfate was detected in method blank MB 240-110702/61 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged. If the associated sample reported a result above the MDL and/or RL, the result has been flagged.

Chloride failed the recovery criteria low for the MS/MSD of sample GW-111413-TP-006 (240-31530-3) in batch 240-110702.

Nitrite as N failed the recovery criteria high for the MS/MSD of sample GW-111413-TP-006 (240-31530-3) in batch 240-110115.

Sample GW-111413-TP-006 (240-31530-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the anions analysis.

All other quality control parameters were within the acceptance limits.

SULFIDE

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for sulfide in accordance with EPA SW-846 Method 9034. The samples were prepared and analyzed on 11/18/2013, 11/19/2013 and 11/21/2013.

Sulfide failed the recovery criteria low for the MS/MSD of sample GW-111413-TP-006 (240-31530-3) in batch 240-110937.

No other difficulties were encountered during the sulfide analysis.

All other quality control parameters were within the acceptance limits.

TOTAL ORGANIC CARBON

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for total organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 11/15/2013 and 11/19/2013.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

DISSOLVED ORGANIC CARBON

Job ID: 240-31465-1 (Continued)

Laboratory: TestAmerica Canton (Continued)

Samples GW-111313-TP-001 (240-31465-1), GW-111413-TP-004 (240-31530-1), GW-111313-TP-002 (240-31465-2), GW-111413-TP-005 (240-31530-2), GW-111413-TP-006 (240-31530-3), GW-111313-TP-003 (240-31465-4), GW-111413-TP-007 (240-31530-4) and GW-111413-TP-008 (240-31530-5) were analyzed for dissolved organic carbon in accordance with EPA SW-846 Method 9060. The samples were analyzed on 11/19/2013.

No difficulties were encountered during the TOC analysis.

All quality control parameters were within the acceptance limits.

RE: Analytical Results and Reduced Validation
Waste Water Treatment Plant Groundwater Monitoring
RACER – Former Delphi I Anderson Facility
Anderson, Indiana
November 2013

1.0 Introduction

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Waste Water Treatment Plant Groundwater monitoring at the Anderson, Indiana Site during November 2013. Samples were submitted to the TestAmerica Laboratory, located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga--Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, duplicate data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items i) and ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect, with the exception of low concentrations of methane, bicarbonate alkalinity, and sulfate in some of the blanks. An associated sample result with a concentration similar to the blank was qualified as non-detect (see Table 4).

4.0 Surrogate Spike Recoveries - Organic Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) and dissolved gases determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis and assessed against laboratory control limits. All surrogate recoveries met the above criteria.

5.0 Laboratory Control Sample Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all analytes of interest. All LCS recoveries were within the laboratory control limits, with the exception of high recoveries for a few VOCs. All associated samples were non-detect for these compounds and would not be impacted by the implied high bias.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess

analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

The laboratory performed site-specific MS/MSD analyses internally.

Organic Analyses

The MS/MSD samples were spiked with all compounds of interest. All percent recoveries and RPD values were within the laboratory control limits with the exception of some low volatile MS or MSD recoveries. In all instances, the remaining recovery was acceptable; the outlier was considered to be anomalous and was disregarded.

Inorganic Analyses

The MS/MSD samples were spiked with the analytes of interest, and the results were evaluated using the "Guidelines". All percent recoveries and RPD values were within the control limits, with the following exceptions:

i) High recoveries were reported for one nitrite MS/MSD. The associated samples were non-detect and would not be impacted by the implied high bias.

ii) The sample concentration was significantly higher than the spike amount for one chloride MS/MSD, and recoveries could not be assessed.

iii) Sulfide recoveries were extremely low (<10 percent). All associated positive results were qualified as estimated; non-detect results were rejected due to the poor analytical efficiency (see Table 5).

7.0 Duplicate Sample Analyses – Inorganic Analyses

Analytical precision is evaluated based on the analysis of laboratory duplicate samples. For this study, duplicate samples were prepared and analyzed by the laboratory for alkalinity and hardness. The duplicate results were evaluated per the "Guidelines". All duplicate analyses performed were acceptable, demonstrating acceptable analytical precision.

8.0 Field QA/QC Samples

The field QA/QC consisted of two trip blank samples and one field duplicate sample set.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, trip blanks were submitted to the laboratory for VOC analysis. All results were non-detect for the compounds of interest with the exception of low concentrations of acetone. All associated sample results were non-detect and were not impacted.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 and 100 percent for water and soil samples, respectively. If the reported concentration in either the investigative

sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criteria is one or two time(s) the PQL value for water and soil samples, respectively.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

9.0 Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

10.0 Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications and exceptions noted herein.
