Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6031-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 3, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/17/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 C.

TOTAL METALS (ICP)

Samples S-17302-111611-DN-01 (240-6031-1), S-17302-111611-DN-02 (240-6031-2), S-17302-111611-DN-03 (240-6031-3), S-17302-111611-DN-04 (240-6031-4), S-17302-111611-DN-05 (240-6031-5) and S-17302-111611-DN-06 (240-6031-6) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 11/21/2011 and analyzed on 11/29/2011 and 11/30/2011.

Several analytes were detected in method blank MB 240-24179/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6094-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

Samples were split into two reports per the SSOW instruction on the chain of custody. CRA did not provide separate chain of custodies.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/18/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.6 C.

The samples were prepared on 11/21/2011 and analyzed on 11/22/2011 and 11/23/2011.

Several analytes were detected in method blank MB 240-24196/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Samples S-17302-111711-DN-11 (240-6094-5)[5X], S-17302-111711-DN-13 (240-6094-7)[5X] and S-17302-111711-DN-17

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6094-2

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

Samples were split into two reports per the SSOW instruction on the chain of custody. CRA did not provide separate chain of custodies.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/18/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 0.6 C.

TOTAL METALS (ICP)

Samples S-17302-111711-DN-08 (240-6094-2), S-17302-111711-DN-09 (240-6094-3), S-17302-111711-DN-10 (240-6094-4), S-17302-111711-DN-14 (240-6094-8), S-17302-111711-DN-15 (240-6094-9), S-17302-111711-DN-16 (240-6094-10) and S-17302-111711-DN-18 (240-6094-12) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 11/21/2011 and analyzed on 11/22/2011 and 11/23/2011.

Several analytes were detected in method blank MB 240-24196/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Sample S-17302-111711-DN-09 (240-6094-3)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6168-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/19/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 C.

The samples were prepared on 11/29/2011 and analyzed on 11/30/2011.

Several analytes were detected in method blank MB 240-24887/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6170-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 9, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/19/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 C.

TOTAL METALS (ICP)

Samples S-17302-111811-DN-22 (240-6170-1), S-17302-111811-DN-23 (240-6170-2), S-17302-111811-DN-37 (240-6170-3) and S-17302-111811-DN-40 (240-6170-4) were analyzed for total metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 11/28/2011 and analyzed on 11/30/2011 and 12/01/2011.

Several analytes were detected in method blank MB 240-24758/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes failed the recovery criteria low for the MS of sample S-17302-111811-DN-37MS (240-6170-3) in batch 240-25166. Aluminum, Chromium and Copper failed the recovery criteria high.

Several analytes failed the recovery criteria low for the MSD of sample S-17302-111811-DN-37MSD (240-6170-3) in batch 240-25166.

Job ID: 240-6170-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6180-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

All tests were cancelled for sample IDs: WG-17302-111211-DN-10, WG-17302-111211-DN-11, and WG-17302-111211-DN-12. The samples contained a significant amount of soil; per CRA they will be resampled at a later date.

RECEIPT

The samples were received on 11/22/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.8 C.

TOTAL RECOVERABLE METALS (ICP)

Samples WG-17302-111211-DN-03 (240-6180-1), WG-17302-111211-DN-04 (240-6180-2), WG-17302-111211-DN-05 (240-6180-3), WG-17302-111211-DN-06 (240-6180-4), WG-17302-111211-DN-07 (240-6180-5), WG-17302-111211-DN-08 (240-6180-6) and WG-17302-111211-DN-09 (240-6180-7) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 11/29/2011 and analyzed on 11/30/2011 and 12/01/2011.

Several analytes were detected in method blank MB 240-24882/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Aluminum failed the recovery criteria high for the MS/MSD of sample WG-17302-111211-DN-08 (240-6180-6) in batch 240-25145.

Job ID: 240-6180-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6218-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/22/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.8 C.

on 12/01/2011, 12/02/2011 and 12/05/2011.

Several analytes were detected in method blank MB 240-25037/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Several analytes were detected in method blank MB 240-25067/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Several analytes failed the recovery criteria low for the MS of sample S-17302-112111-DN-57MS (240-6218-16) in batch 240-25310. Aluminum and Iron failed the recovery criteria high.

For the MSD of sample S-17302-112111-DN-57MSD (240-6218-16) in batch 240-25310, Several analytes failed the recovery criteria low. Aluminum and Iron failed the recovery criteria high. Also, Manganese exceeded the rpd limit.

Samples S-17302-111911-DN-43 (240-6218-2)[5X], S-17302-111911-DN-45 (240-6218-4)[5X], S-17302-111911-DN-46 (240-6218-5)[5X], S-17302-112111-DN-50 (240-6218-9)[5X], S-17302-112111-DN-51 (240-6218-10)[5X], S-17302-112111-DN-58 (240-6218-17)[5X] and S-17302-112111-DN-64 (240-6218-23)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the metals analyses.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-6245-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 11/23/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.9, 3.1, 3.3 and 3.8 C.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T09, RACER Delphi Anderson

Report Number: 240-6311-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 11/29/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.2 C.

Several analytes were detected in method blank MB 240-25513/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. The samples were prepared and analyzed on 12/02/2011, 12/06/2011, 12/8/2011, and 12/16/2011.

Cyanide, Total failed the recovery criteria low for the MSD of sample S-17302-112311-DN-117MSD (240-6311-12) in batch 240-25738. Cyanide, Total exceeded the rpd limit.

Cyanide, Total failed the recovery criteria low for the MS/MSD of sample S-17302-112311-DN-108 (240-6311-3) in batch 240-25424.

The matrix spike / matrix spike duplicate (MS/MSD) recoveries for the following sample associated with batch 25424 were outside control limits: S-17302-112311-DN-108 (240-6311-3), S-17302-112311-DN-108 (240-6311-3 MS), S-17302-112311-DN-108 (240-6311-3 MSD). The associated laboratory control sample (LCS) recovery met acceptance criteria. The MS/MSD had no recovery and the analyst suspected that it had not been spiked. This was confirmed one day after holding time had expired for the sample, when it was reprepped and reanalyzed on 12/8/11. This time, the MS/MSD met acceptance criteria, confirming the sample had not been spiked on the original analysis date. The first set of data is reported.

The Amenable Cyanide test is a way of determining the amount of cyanide in a sample that is broken down or essentially destroyed by adding excess residual chlorine to a sample. The difference between the total cyanide and the result of the treated sample (non-amenable cyanide) is the amount of cyanide that is amenable to chlorination.
Select samples were analyzed outside of method recommended holding time for non-amenable cyanide due to method blank contamination. The non-amenable cyanide were initially analyzed within holding time but the data could not be used to calculate the amenable cyanide because of possible contamination. Non-amenable data is not reported but it is used to calculate the amenable cyanide.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

Samples S-17302-112311-DN-111 (240-6311-6)[5X], S-17302-112311-DN-112 (240-6311-7)[5X], S-17302-112811-DN-120 (240-6311-15)[5X], S-17302-112811-DN-122 (240-6311-17)[20X], S-17302-112811-DN-125 (240-6311-20)[5X] and S-17302-112811-DN-126 (240-6311-21)[5X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the cyanide analyses.

All other quality control parameters were within the acceptance limits.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T06, RACER Delphi Anderson

Report Number: 240-6313-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 11/29/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 4.2 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-17302-112811-DN-128 (240-6313-1), S-17302-112811-DN-129 (240-6313-2) and S-17302-112811-DN-130 (240-6313-3) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 11/29/2011 and analyzed on 12/05/2011.

1,2,4-Trichlorobenzene was detected in method blank MB 240-25593/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

Toluene-d8 (Surr) failed the surrogate recovery criteria high for S-17302-112811-DN-129MS (240-6313-2MS). Toluene-d8 (Surr) failed the surrogate recovery criteria high for S-17302-112811-DN-129MSD (240-6313-2MSD).

1,1,2,2-Tetrachloroethane failed the recovery criteria high for the MS/MSD of sample S-17302-112811-DN-129 (240-6313-2) in batch 240-25593.

Job ID: 240-6313-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 17302-T08, RACER Delphi Anderson

Report Number: 240-6380-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised report was provided on February 4, 2012. The revision included a correction to the amenable cyanide calculation.

RECEIPT

The samples were received on 12/01/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.8 and 2.6 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-17302-112911-DN-135 (240-6380-1), S-17302-112911-DN-136 (240-6380-2), S-17302-112911-DN-137 (240-6380-3), S-17302-112911-DN-138 (240-6380-4), S-17302-112911-DN-139 (240-6380-5), S-17302-112911-DN-140 (240-6380-6), S-17302-112911-DN-141 (240-6380-7), S-17302-112911-DN-142 (240-6380-8), S-17302-112911-DN-143 (240-6380-9) and S-17302-112911-DN-144 (240-6380-10) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were prepared on 12/01/2011 and analyzed on 12/08/2011 and 12/09/2011.

All samples were preserved via freezing outside the method recommended 48 hour holding time. The samples are flagged with an H.

Several analytes were detected in method blank MB 240-26056/6 at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. 1,2,4-Trichlorobenzene was detected in method blank MB 240-26134/6 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged
