Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

[1] Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013 pursuant to 1994 PA 451 as amended.
[2] Carbonate Hardness of 344 mg/L was used to calculate Groundwater-Surface Water Interface Protection Criteria.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Estimated reporting limit.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
R - Rejected.
-- Parameter was not analyzed.
☐ - Exceeds Generic Cleanup Criteria.
Superscript letter notes the criterion exceeded.

Table 3.5

Michigan Part 201 Residential and Nonresidential Soil Generic Cleanup Criteria
No Further Action Report
Former Grand Rapids Metal Plant
Wyoming, Michigan

		MDEQ Generic Cleanup Criteria: Residential and Nonresidential [(1)]							
		Nonresidential Finite VSIC for 5 Meter Source Thickness	Finite VSIC for 2 Meter Source Thickness	Nonresidential Finite VSIC for 2 Meter Source Thickness	Particulate Soil Inhalation	Nonresidential Particulate Soil Inhalation	Direct Contact	Nonresidential Direct Contact	Soil Saturation Concentration Screening Levels
		j	k	l	m	n	o	p	q
Cyanide (total)	ug/kg	NLV	NLV	NLV	250000	250000	12000	250000	NA

Notes:

[(1)] Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013 pursuant to 1994 PA 451 as amended.
[(2)] Carbonate Hardness of 344 mg/L was used to calculate Groundwater-Surface Water Interface Protection Criteria.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Estimated reporting limit.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
R - Rejected.
-- Parameter was not analyzed.
☐ - Exceeds Generic Cleanup Criteria.
Superscript letter notes the criterion exceeded.

Former Grand Rapids Metal Plant
Wyoming, Michigan

Sample Location		**SB119-11**
Sample Identification		**SO-17360-030211-DR-158**
Sample Date		**3/2/2011**
Sample Type		
Sample Depth		**(12-14) ft BGS**
Excavation Status	**Units**	**Unexcavated**
AOI		**AOI 33**
Isopropyl benzene	ug/kg	220 U
Methyl acetate	ug/kg	1000 U
Methyl cyclohexane	ug/kg	1000 U
Methyl tert butyl ether (MTBE)	ug/kg	220 U
Methylene chloride	ug/kg	220 U
Styrene	ug/kg	43 U
Tetrachloroethene	ug/kg	24 J
Toluene	ug/kg	87 U
trans-1,2-Dichloroethene	ug/kg	43 U
trans-1,3-Dichloropropene	ug/kg	43 U
Trichloroethene	ug/kg	43 U
Trichlorofluoromethane (CFC-11)	ug/kg	87 U
Trifluorotrichloroethane (Freon 113)	ug/kg	220 U
Vinyl chloride	ug/kg	35 U
Xylenes (total)	ug/kg	130 U
Semi-Volatile Organic Compounds (SVOCs)		
2-Methylnaphthalene	ug/kg	280 U
Acenaphthene	ug/kg	280 U
Acenaphthylene	ug/kg	280 U
Anthracene	ug/kg	280 U
Benzo(a)anthracene	ug/kg	280 U
Benzo(a)pyrene	ug/kg	280 U
Benzo(b)fluoranthene	ug/kg	280 U
Benzo(g,h,i)perylene	ug/kg	280 U
Benzo(k)fluoranthene	ug/kg	280 U
Chrysene	ug/kg	280 U
Dibenz(a,h)anthracene	ug/kg	280 U
Fluoranthene	ug/kg	280 U
Fluorene	ug/kg	280 U
Indeno(1,2,3-cd)pyrene	ug/kg	280 U
Naphthalene	ug/kg	280 U
Phenanthrene	ug/kg	280 U
Pyrene	ug/kg	280 U

DECLARATION OF RESTRICTIVE COVENANT

MDEQ Reference No: RC-RRD-201-17-006
Part 201 Site Identification Number: 41000115
USEPA Site Identification Number: MID006020408
MDEQ Approval Date: March 3, 2017

This Declaration of Restrictive Covenant ("Restrictive Covenant") has been recorded with the Kent County Register of Deeds to protect public health, safety, or welfare or the environment pursuant to the applicable provisions of Part 201, entitled "Environmental Remediation," MCL 324.20101 *et seq.* ("Part 201"), of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, MCL 324.101, *et seq.* ("NREPA"), the administrative rules promulgated pursuant to Part 201, Michigan Administrative Code (MAC) R 299.5101 *et seq.*, and the Toxic Substances Control Act, 15 USC 2601 *et seq.* ("TSCA").

This Restrictive Covenant is made by the City of Wyoming Brownfield Redevelopment Authority ("WBRA"), the address of which is 1155 28th Street, Wyoming, MI 49509, the Grantor and current fee title holder of the property legally described and illustrated in Exhibit 1, commonly known as 300 and 301 36th Street SW in the City of Wyoming, Kent County, Michigan, tax identification numbers 41-17-24-201-007 and 41-17-13-455-052 (the "Property"), for the benefit of the Grantee, State of Michigan, Department of Environment Quality, the address of which is 525 West Allegan Street, P.O. Box 30473, Lansing, MI 48909-7973 ("MDEQ").

The recording of this Restrictive Covenant replaces in its entirety the Declaration of Restrictive Covenant and Access Easement dated as of June 27, 2011, and recorded with the Kent County Register of Deeds on July 19, 2011 as Document 20110719-0057582 (the "2011 Restrictive Covenant and Easement"). The 2011 Restrictive Covenant and Easement will be terminated by MDEQ and RACER Properties LLC, after the recordation of this Restrictive Covenant.

This Restrictive Covenant has been prepared and recorded (i) to prohibit or restrict activities that could result in unacceptable exposure to environmental contamination present at the Property, and (ii) to assure that the use of the Property is consistent with the exposure assumptions used to develop the nonresidential clean-up criteria under Part 201, the Low Occupancy clean-up level under TSCA, and the exposure control measures relied upon at the Property.

Recording of this Restrictive Covenant with the Kent County Register of Deeds is designed to: (1) restrict land uses at the Property; (2) restrict exposures to groundwater on the Property; (3) provide notification that Polychlorinated Biphenyls (PCB) Remediation Waste (impacted soil) remains on the Property in the areas described and illustrated in Exhibit 2; (4) restrict use of the designated PCB Remediation Waste Areas at the Property to Low Occupancy as described and illustrated in Exhibit 2; (5) require any future work or other activities on the Property by or for the Owner to be conducted in conformance with; i) applicable MDEQ soil relocation requirements including but not limited to MCL 324.20120c and any related administrative rules, ii) applicable due care obligations under MCL 324.20107a and associated administrative rules and guidance, and iii) the Hazardous Waste Operations and Emergency Response Standard (HAZWOPER), 29 CFR, Part 1910; (6) prohibit structures from being constructed on the Property unless the Owner has assessed the potential for vapor intrusion, if any, and has taken steps to address such potential, if necessary, as may be required by applicable laws, rules and regulations; (7) require infiltration management in the designated area of the Property as described and illustrated in Exhibit 3; (8) provide notification that, as of the date of this Restrictive Covenant, impacted soil above the Part 201 non-residential direct contact criteria and particulate soil inhalation criteria remains on the Property in the locations described and illustrated in Exhibit 4, and (9) provide notification that, as of the date of this Restrictive Covenant, residual light non aqueous phase liquid ("LNAPL") potentially remains on the Property in the location described and illustrated in Exhibit 5.

The land or resource use restrictions contained in this Restrictive Covenant are based upon information available to MDEQ at the time this document was recorded and based on laws, rules and regulations in effect at the time this document was recorded. Future changes in the environmental condition of the Property, changes in the cleanup criteria or the cleanup levels included in applicable laws, rules and regulations, the discovery of environmental conditions at the Property that were not known at the time this document was recorded; or use of the Property in a manner inconsistent with the restrictions described herein, may result in the need for additional restrictions to protect the public health, safety, welfare, or the environment, or in the ability to modify restrictions while still protecting the public health, safety, and welfare, and the environment.

This Restrictive Covenant cites laws, rules and regulations in effect at the time it was recorded. To the extent those laws, rules or regulations are subsequently amended, replaced or otherwise superseded, this Amended Restrictive Covenant shall be read to incorporate those amending, replacing or otherwise superseding laws, rules and regulations in place of those currently cited herein.

Information pertaining to the environmental conditions at the Property and the response action undertaken at the Property is on file with the MDEQ, Remediation and Redevelopment Division, Grand Rapids District Office.

Based on the results of Site investigations, the Property contains hazardous substances in soils and groundwater in excess of the concentrations developed as the unrestricted residential

20170831-0073657
Lisa Posthumus Lyons P:3/21 3:58PM
Kent Cnty MI Rgstr 08/31/2017 SEAL

criteria under Section 20120a(1)(a) or (17) of NREPA, 1994 PA 451, as amended, and above TSCA High Occupancy levels per 40 CFR Part 761.3. MDEQ recommends that prospective purchasers or users of the Property undertake appropriate due diligence prior to acquiring or using this Property, and undertake appropriate actions to comply with the requirements of Section 20107a of NREPA.

Definitions

"Grantee" means the MDEQ.

"Grantor" means the WBRA, and any future title holder of the Property or some relevant sub-portion of the Property.

"MDEQ" means the Michigan Department of Environmental Quality, its successor entities, and those persons or entities acting on its behalf.

"Owner" means at any given time the then-current fee title holder(s) of the Property or any portion thereof, including the fee title holder's lessees and those persons or entities authorized to act on its behalf. Record legal title to the Property at the time this Restrictive Covenant was recorded was held by the WBRA.

"RACER" means the Revitalizing Auto Communities Environmental Response Trust ("Trust"), which on March 31, 2011 was established and assumed the rights, title, and interest of Motors Liquidation Company in and to the Property pursuant to an Environmental Response Trust Consent Decree and Settlement Agreement ("Settlement Agreement") entered by the U.S. Bankruptcy Court for the Southern District of New York on March 29, 2011, in the case of *In re Motors Liquidation Company*, et al., Debtors, Case No. 09-50026 (REG), among the Debtors, the United States of America, certain states including the State of Michigan, the Saint Regis Mohawk Tribe, and EPLET, LLC, (not individually but solely in its representative capacity as Administrative Trustee of the Trust).

"USEPA" means the United States Environmental Protection Agency, its successor entities, and those persons or entities acting on its behalf.

All other terms used in this document which are defined in Part 3 Definitions, Part 201 of NREPA, Part 201 of Michigan Administrative Rules, TSCA, or 40 CFR 761, shall have the same meaning in this document as in those statutes and rules as on the date this Restrictive Covenant is made.

Summary of Response Activities

Several environmental assessments of the Property and groundwater monitoring events were conducted between 1981 and 2017 to identify and document environmental conditions, and the

20170831-0073657
Lisa Posthumus Lyons P:4/21 3:58PM
Kent Cnty MI Rgstr 08/31/2017 SEAL

presence at the Property of substances posing an adverse environmental impact as a result of past operations.

Based on these assessments, soil was found to contain certain metals, volatile organic compounds (VOCs), polynuclear aromatic hydrocarbons (PAHs), and PCBs in several discrete areas of the Property at concentrations exceeding the corresponding Part 201 nonresidential drinking water protection, groundwater-surface water interface protection, nonresidential volatilization to indoor air inhalation, non-residential direct contact and/or nonresidential particulate soil inhalation criteria. Concentrations of PCBs found in soil also exceeded the TSCA criteria for bulk PCB Remediation Waste in High Occupancy Areas without further conditions (40 CFR 761.61(1)(4)(i)). The horizontal and vertical extent of soil conditions exceeding non-residential direct contact and particulate soil inhalation criteria were delineated in 2013. Soil remediation activities conducted in 2012 and 2015 included the removal and off-site disposal of approximately 4 to 8 feet of impacted soil in select areas; a total of approximately 5,800 tons. These areas were backfilled and restored. Post-excavation soil sampling and analyses indicate the presence of certain metals and benzo(a)pyrene exceeding Part 201 non-residential direct contact and particulate soil inhalation criteria, and PCBs exceeding the TSCA criteria for bulk PCB Remediation Waste in High Occupancy Areas, without further conditions, remain in limited areas. See Exhibit 4 for locations where soil with concentrations of specific constituents exceed Part 201 non-residential direct contact and/or particulate soil inhalation cleanup criteria. An area in the northwestern portion of the Property containing exceedances of Part 201 cleanup criteria for protection of the groundwater-surface water interface is a concern because of the proximity of the area to Cole Drain, which runs near the northwestern Property boundary.

Based on the environmental assessments and groundwater monitoring, groundwater at the Site was found to contain VOCs, PAHs, and/or metals exceeding Part 201 non-residential drinking water criteria and/or the groundwater-surface water interface criteria.

Based on past observation of LNAPL in monitoring wells at the Property, residual LNAPL, as defined in MDEQ's June 2014 Non-Aqueous Phase Liquid (NAPL) Characterization, Remediation, and Management for Petroleum Releases, RRD Resource Materials-25-2014-01, may remain on the Property. As of the date of this Restrictive Covenant there is no observable LNAPL in monitoring wells at the Property. The Potential Residual LNAPL Area is described and illustrated in Exhibit 5. This LNAPL contains mineral spirits/mineral seal oil and/or hydraulic oil. Contaminants present in the Potential Residual LNAPL Area were properly characterized and assessed, and will remain in place at the Property. The potential for the presence of residual LNAPL exists from approximately seventeen (17) to twenty-five (25) feet below ground surface (approximately from 655 to 663 feet above mean sea level, at the time this Restrictive Covenant was recorded. The restrictions provided for in this Restrictive Covenant serve to prevent unacceptable exposure to hazardous substances as a result of possible conditions created by the potential presence of residual LNAPL in soil and groundwater that may exceed the unrestricted nonresidential criteria under Section 20120a(1)(a) of NREPA.

20170831-0073657
Lisa Posthumus Lyons P:5/21 3:58PM
Kent Cnty MI Rgstr 08/31/2017 SEAL

At the time this Restrictive Covenant was recorded, RACER was pursuing a No Further Action determination for the Property from MDEQ.

NOW THEREFORE,

Declaration of Land Use or Resource Use Restrictions

Grantor as the current fee title holder of the Property hereby declares and covenants that the Property shall be subject to the following restrictions and conditions and intends that said restrictions and covenants shall run with the land, and may be enforced, as provided herein, in perpetuity against the Owner by the following entities: (1) MDEQ; (2) USEPA; (3) WBRA; and (4) RACER or its successor.

1. Land Use Prohibitions. The Owner shall not make any use and shall prohibit all uses of the Property that are not compatible or consistent with the exposure assumptions for the nonresidential cleanup criteria established pursuant to Section 324.20120a(1)(b) of NREPA, and generally described in the Description of Allowable Uses, attached hereto as Exhibit 6.

   Part 201 cleanup criteria for land use-based response activities are located in the Government Documents Section of the State of Michigan Library, MCL 324.201201, *et seq.*, effective December 31, 2013, and MAC R 299.5701 – R 299.5727, also effective December 31, 2013.

   The Owner shall prohibit uses of the PCB Waste Remediation Areas delineated on Exhibit 2 (soil containing less than 10 milligrams/kilogram (mg/kg or ppm) PCBs) not consistent with Low Occupancy, as defined in 40 CFR 761.3. The Owner must apply to USEPA, under 40 CFR 761.61(a), for approval to change the Low Occupancy use restriction.

2. Notification of PCB Remediation Waste. This provision provides the notification required by 40 CFR Part 761.61(a)(8)(i)(A) that PCB Remediation Waste is present on the Property. PCB Remediation Waste (soil containing less than 10 ppm) is present in two areas at the Property as delineated in Exhibit 2 (the "PCB Remediation Waste Areas"). These areas are designated Low Occupancy Areas.

3. Activities Prohibited. The Owner shall prohibit activities on the Property that may result in exposures above the nonresidential land use category and, for Low Occupancy levels for the PCB Remediation Waste Areas. These prohibited activities include:

   a. No drinking water or irrigation wells exist on the Property at the time of the execution of this Restrictive Covenant and no drinking water or irrigation wells may be installed or used on the Property.

20170831-0073657
Lisa Posthumus Lyons P:6/21 3:58PM
Kent Cnty MI Rgstr 08/31/2017 SEAL

b. No groundwater extraction wells may be installed or used on the Property except for wells and devices that are part of an MDEQ-approved response activity and for short-term dewatering for construction purposes, provided the dewatering, including management and disposal of the groundwater, is conducted in accordance with all applicable environmental laws and does not cause or result in a new release, exacerbation of any pre-existing environmental condition, or any other violation of environmental laws.

c. No contaminated soils, if any, may be relocated on the Property except as provided for under Part 201, Section 20120c, MCL 324.20120c.

d. No "treatment", "storage", "disposal", or "release" of any Hazardous Substances, on, at, or below the Property, in a manner that would require a permit under the Resource Conservation and Recovery Act, 42 U.S.C. §§ 6901 *et seq.* ("RCRA"), or equivalent state law, except pursuant to a plan or permit approved in writing by MDEQ as provided by applicable laws, rules and regulations.

e. No construction or occupying any structure on the Property without first completing one of the following options. Option 1: Evaluate and demonstrate to the satisfaction of MDEQ, in accordance with applicable environmental laws, rules, or regulations that no unacceptable vapor intrusion risks to human health exist in any existing or newly constructed site buildings. Option 2: With concurrence from the MDEQ, install, operate, and maintain a vapor barrier and/or mitigation system designed to eliminate the potential for subsurface vapor phase hazardous substances to migrate into any building at concentrations greater than applicable criteria. This prohibition does not apply to short-term occupancy of a building for purposes of construction, renovation, repair, or other short-term activities as long as adequate health and safety precautions are employed during these activities, and they are performed in compliance with Section 20107a of NREPA.

   If Option 2 above is selected, the Owner shall install and, until MDEQ concurs that it is no longer necessary in accordance with Option 1, thereafter maintain a vapor barrier and/or install and thereafter operate and maintain a vapor intrusion mitigation system in accordance with applicable standards and criteria at the time, for the purpose of mitigating the potential intrusion of soil vapor below any building constructed on the property after the date of this Restrictive Covenant.

f. No removal of the existing surface cover or activities that otherwise increase infiltration in the Infiltration Management Area, which is delineated in Exhibit 3. The existing surface cover in the Infiltration Management Area shall be maintained so that the cover minimizes infiltration. New or different surface cover that is equally or more effective as the existing cover in preventing

infiltration may be installed if the new or different cover is approved by MDEQ. In addition, the Owner shall not construct or install subgrade utilities, structures or other features in the Infiltration Management Area unless the construction incorporates engineering controls designed to eliminate the potential for perched water to enter the utility and/or migrate along the utility corridor, or for the utility/structure/feature to release fluids that could infiltrate through the subsurface and exacerbate impacts to groundwater. The construction details for any such utility, structure or feature shall be approved by MDEQ prior to its construction.

g. No excavation or other intrusive activity within the PCB Remediation Waste Areas unless such work is performed in compliance with 40 CFR 1910.120, and shall not result in the exposure to workers not wearing required personal protective equipment (PPE).

h. No disturbing or damaging any monitoring wells (if present) on the Property without the prior written approval of MDEQ. If reasonably needed to accommodate development of the Property, Grantor or the Owner may request in writing to MDEQ and RACER at the addresses provided in Paragraph 7, to relocate or remove RACER's monitoring wells. MDEQ, after considering any written comments made by RACER, may approve such a request. RACER, MDEQ, and USEPA shall be provided access by the Owner to and use of any relocated monitoring wells.

4. Removal of Pavement. If the Owner elects to remove any slabs, pavement or other impervious surface on the Property, Owner shall be responsible for any and all obligations under environmental laws arising from any such removal, alteration or disturbance, whether or not caused by, arising from or related to, an environmental condition.

5. Contaminated Soil Management. The Owner shall manage contaminated soils, media and/or debris (if any) and all other soils located on the Property in accordance with any applicable requirements of Part 111, the Solid Waste Disposal Act, commonly referred to as the Resource Conservation and Recovery Act of 1976 (RCRA), as amended by the Hazardous and Solid Waste Amendments of 1984, 42 USC 6901 *et seq.*, the administrative rules promulgated pursuant to Part 111 and RCRA, TSCA, and all other relevant state and federal laws, including but not limited to MCL 324.20120c.

6. Access. The Owner shall grant MDEQ, USEPA, WBRA, and RACER the right to enter the Property at reasonable times: (1) to conduct and complete any and all response activities, together with any reasonably needed ingress and egress to the Property; and (2) for the purpose of determining and monitoring compliance with this Restrictive Covenant, including the right to take samples and, inspect any records relating thereto, and to perform any actions necessary to maintain compliance with Part 111 and Part

20170831-0073657
Lisa Posthumus Lyons P:8/21 3:58PM
Kent Cnty MI Rgstr 08/31/2017 SEAL

201, or 40 CFR 761. To the extent reasonably feasible, such entry shall occur at times and under conditions as are reasonably acceptable to the Owner and occupants of the Property and in compliance with security, safety, and other protocols of the Owner and occupants of the Property.

7. Notices. Any notice, demand, request, consent, approval, or communication that is required to be made or obtained under this Restrictive Covenant shall be made in writing; include a statement that the notice is being made pursuant to the requirements of this Restrictive Covenant; include the USEPA Identification Number: MID006020408; and MDEQ Reference Number: RC-RRD-201-17-006; and shall be served either personally, or sent via first class mail, postage prepaid, as follows:

8. Conveyance of Property Interest. The Owner shall provide notice to the MDEQ, USEPA, WBRA, and RACER at the addresses provided in Paragraph 7, of the Owner's intent to transfer any interest in the Property at least fourteen (14) days prior to consummating the conveyance. A conveyance of title, easement, or other interest in the Property shall not be consummated by the Owner without providing the prospective grantee a copy of this Restrictive Covenant and referring the prospective grantee to MCL 324.20116. The notice required to be made under this Paragraph shall include a statement that the notice is being made pursuant to the requirements of this Restrictive Covenant. Owner shall include in any instrument conveying any interest in any portion of the Property, including, but not limited to, deeds, leases, and mortgages, a notice which is in substantially the following form:

NOTICE: THE INTEREST CONVEYED HEREBY IS SUBJECT TO A DECLARATION OF RESTRICTIVE COVENANT DATED _____ [*month, day, year*], AND RECORDED WITH THE KENT COUNTY REGISTER OF DEEDS, LIBER _____, PAGE _____.

The Owner shall provide a copy of this Restrictive Covenant to all future owners, heirs, successors, lessees, easement holders, assigns, and transferees by the person transferring the interest.

9. Term. This Restrictive Covenant shall run with the Property and shall be binding on the Owner, and all current and future successors, lessees, easement holders, their assigns, and their authorized agents, employees, or persons acting under their direction and control.

10. Modification/Release/Rescission. Grantor or Owner may request in writing to MDEQ and RACER, with a copy to USEPA and WBRA at the addresses provided in Paragraph 7, modifications to, or release or rescission of, this Restrictive Covenant. This Restrictive Covenant may be modified, released or rescinded only with the written

approval of MDEQ and RACER, after considering any written comments made by USEPA and WBRA. A modification of any provision of this Restrictive Covenant concerning requirements under TSCA or RCRA or affecting the PCB Remediation Waste Areas shall require approval of USEPA and RACER, and any request for such a modification shall be made to USEPA and RACER, with copies to the MDEQ and WBRA. RACER shall approve a modification, release, or rescission of this Restrictive Covenant in support of the Property's redevelopment, unless RACER in good faith reasonably believes that by so approving, the scope of RACER's environmental obligations with respect to the Property, and the associated costs of such obligations, would expand beyond RACER's allocated "Minimum Estimated Property Funding" and "Reserve Property Funding" for the Property. Any approved modification to, or release or rescission of, this Restrictive Covenant shall be filed with the appropriate Registrar of Deeds by the Grantor or Owner and a certified copy shall be returned to MDEQ, USEPA, WBRA, and RACER, at the addresses provided Paragraph 7.

11. Compliance with this Restrictive Covenant and Applicable Due Care Obligations. The Owner shall at all times comply with the conditions and restrictions of this Restrictive Covenant and the applicable due care obligations under Section 20107a of NREPA and CERCLA, 42 U.S.C. §§ 9601, *et seq.* Owner shall maintain records of its applicable due care activities and shall supply copies of any records documenting such compliance upon request from MDEQ, USEPA, WBRA, or RACER.

12. Enforcement. MDEQ, USEPA, WBRA, and RACER are entitled to enforce the restrictions and covenants is this Restrictive Covenant by specific performance or other legal action in a court of competent jurisdiction against the current and subsequent Owners of all or part of the Property. All remedies available hereunder shall be in addition to any and all other remedies at law or equity.

13. Severability. If any provision of this Restrictive Covenant is held to be invalid by a court of competent jurisdiction, the invalidity of such provision shall not affect the validity of any other provisions of this Restrictive Covenant and all other provisions shall continue to remain in full force and effect.

14. Limitation on RACER's Liability. RACER's and the Administrative Trustee's liability are limited by the terms and conditions of the Settlement Agreement, which are incorporated herein by reference.

15. Authority to Execute Restrictive Covenant. The execution of this Restrictive Covenant by the WBRA was authorized by a resolution of the WBRA Board of Directors at a meeting held on June 19, 2017.

16. Miscellaneous.

    a) Controlling Law. The interpretation and performance of this Restrictive Covenant shall be governed by the laws of the United States as to the obligations referred

to in the Settlement Agreement and the laws and regulations of the State of Michigan for all other purposes hereunder (without reference to choice of laws principles thereof). The right to enforce the conditions and restrictions in this Restrictive Covenant are in addition to other rights and remedies that may be available, including, but not limited to, administrative and judicial remedies under CERCLA or Part 201 of the NREPA.

b) Liberal Construction. Any general rule of construction to the contrary notwithstanding, this Restrictive Covenant shall be liberally construed to affect the purpose of this Restrictive Covenant, and the policy and purpose of TSCA, RCRA, and the land use restrictions and prospective use limitations required by Part 201. If any provision of this Restrictive Covenant is found to be ambiguous, an interpretation consistent with the purpose of this Restrictive Covenant that would render the provision valid shall be favored over any interpretation that would render it invalid.

c) Entire Agreement. This Restrictive Covenant and its attachments and appendices supersedes all prior discussions, negotiations, understandings, or agreements relating specifically to this Restrictive Covenant, all of which are merged herein.

DESCRIPTION OF ALLOWABLE USES

Nonresidential Land Use: This land use is characterized by any use which is not residential in nature and is primarily characterized by industrial and commercial uses. Industrial uses typically involve manufacturing operations engaged in processing and manufacturing of materials or products. Other examples of industrial uses are utility companies, industrial research and development, and petroleum bulk storage. Commercial uses include any business or income-producing use such as commercial warehouses, lumber yards, retail gas stations, auto dealerships and service stations, as well as office buildings, banks, and medical/dental offices (not including hospitals). Commercial uses also include retail businesses whose principal activity is the sale of food or merchandise within an enclosed building and personal service establishments which perform services indoors such as health clubs, barber/beauty salons, photographic studios, etc.

Any residential use is specifically prohibited from the non-residential land use category. This would include the primary use of the property for human habitation and includes structures such as single family dwellings, multiple family structures, mobile homes, condominiums, and apartment buildings. Residential use is also characterized by any use which is intended to house, educate, or provide care for children, the elderly, the infirm, or other sensitive populations, and therefore could include day care centers, educational facilities, hospitals, elder care facilities, and nursing homes. The use of any accessory building or portion of an existing building as a dwelling unit permitted for a proprietor or storekeeper and their families, located in the same building as their place of occupation, or for a watchman or caretaker is also prohibited. Any authority that allows for residential use of the Property as a legal non-conforming use is also restricted per the prohibitions contained in this restrictive covenant.

Low Occupancy Area: As defined in 40 CFR 761.3, low occupancy area means any area where PCB Remediation Waste has been disposed of on-site and where occupancy for any individual not wearing dermal and respiratory protection for a calendar year is: less than 840 hours (an average of 16.8 hours per week) for non-porous surfaces and less than 335 hours (an average of 6.7 hours per week) for bulk PCB Remediation Waste. Examples could include an electrical substation or a location in an industrial facility where a worker spends small amounts of time per week (such as an unoccupied area outside a building, an electrical equipment vault, or in the non-office space in a warehouse where occupancy is transitory).

Appendix B
LNAPL Conceptual Site Model Memorandum

Memorandum

To:	Dave Favero, RACER Trust	Ref. No.:	017360
From:	Matt Rousseau/Jeni Quigley/Earl Batenburg/68/Pwl.	Date:	November 23, 2015

Re: **Summary of LNAPL Evaluation Activities**
Former Grand Rapids Metal Plant
Wyoming, Michigan

GHD Services, Inc. (GHD) on behalf of Revitalizing Auto Communities Environmental Response (RACER) Trust, conducted a review of information related to the presence of light non-aqueous phase liquid (LNAPL) at the former Grand Rapids Metal Plant property located at 300 36th Street in Wyoming, Michigan (Site). This memorandum (Memorandum) has been prepared to summarize available information and apply the RACER LNAPL management decision-making framework for the evaluation of LNAPL present at the Site. The area that is the focus of this evaluation was identified as Area of Interest (AOI) 6 in the Current Conditions Report (CCR) submitted to the Michigan Department of Environmental Quality (MDEQ) on December 23, 2010.

Site Background

The Site consists of approximately 88 acres located in the City of Wyoming, Michigan. The Site included a 2 million square-foot main manufacturing building, in addition to several outlying buildings and ancillary structures. The Site was originally developed in 1936 by the Fisher Body Division of General Motors and was formerly operated as an automobile metal fabrication and assembly plant until 2010 when operations ceased. Operations included the use of various heavy metal-based materials, oils and solvents. RACER Trust sold the property in 2011 to Thunder Ventures, who subsequently transferred the Site to the City of Wyoming Brownfield Redevelopment Authority (WBRA); however, RACER retains certain responsibilities related to subsurface contamination associated with historical operations at the Site. Investigation and cleanup activities are being performed voluntarily by the RACER Trust.

Decommissioning, demolition and redevelopment activities were completed by MCM Management Corporation (MCM) on the Site on behalf of WBRA in 2011 and 2012. Activities included decommissioning and demolition of all Site structures, with the exception of the Primary Switch House, a storm sewer pump house, and a Consumers Energy Company substation, removal of the former building slabs, and re-grading of the Site. The Site is currently being marketed for future redevelopment.

Summary of LNAPL Investigations and Monitoring

An area in the northeastern portion of the Site was excavated during plant modernization activities in June 1985. The excavation was approximately 20 feet in depth, and was located near Column A-15 of the

GHD Services Inc.

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

former main manufacturing building. Soil was removed in particular areas to the water table, where a "distinct layer of hydrocarbons consisting of mineral spirits was discovered (in contact with groundwater)" . The LNAPL was believed to consist of mineral seal oil and/or mineral spirits, which were used in processes in this portion of the former main manufacturing building for approximately 50 years. The primary operations conducted in this portion of the former main manufacturing building included metal stamping utilizing blanking. According to Site records reviewed, a release was reported to the National Response Center and the Michigan Department of Natural Resources (MDNR)(predecessor of the MDEQ) on July 26, 1985.

Subsurface investigation was subsequently undertaken by EDI Engineering and Science (EDI) to determine the extent of LNAPL impacts. A total of seven monitoring wells were installed during the investigation; four of the wells were installed around the excavation, in the northeastern portion of the former main manufacturing building, and three wells were installed outside the former main manufacturing building on the north, northwest, and west sides of the former main manufacturing building. LNAPL was observed in monitoring wells located in the northeastern portion of the former main manufacturing building.

Following the initial investigation, well gauging and groundwater sampling for semi-volatile organic compounds (SVOCs) have been conducted with the following results:

- Exceedances of the Part 201 Generic Residential Cleanup Criteria (GRCC) have been noted over time
- LNAPL exhibiting a weathered hydraulic oil-like odor had been observed on a periodic basis in monitoring wells 85-5B and 85-3

A Groundwater Investigation Work Plan was submitted to the Michigan Department of Natural Resources and Environment (MDNRE) in 2008 that included the abandonment of monitoring well 85-3 and installation of a new monitoring well adjacent to 85-3. The original construction of monitoring well 85-3 was not suitable for LNAPL monitoring since the recorded static water level in the well was consistently above the top of the monitoring well screen. The Work Plan was implemented in April 2010, with monitoring well 85-3 abandoned and a new monitoring well, MW18-10, installed adjacent to the former well. No LNAPL was identified in MW18-10 during October 2010 groundwater monitoring activities.

During basement foundation demolition activities in May 2012, MCM discovered LNAPL in a location outside of the AOI 6 boundary. MCM was attempting to remove all sheet pile walls that extended below the groundwater table when groundwater started to infiltrate the excavation and sheen was observed on the surface of the water. GHD noted a solvent-like odor while conducting a visual observation of the area.

Two soil samples were collected by the WBRA's consultant, Soils & Materials Engineers, Inc. (SME), to assess worker exposure during demolition. Sample "AREA 9.1" was an unsaturated soil sample collected immediately above the water table (estimated to be approximately 18-20 feet below the former plant floor) near former building column A, row 20 (A20). Sample "AREA 9.2" was a saturated soil sample collected near former building column/row A24 and estimated to be approximately 20 to 22 feet below the former plant floor. Both soil samples exhibited a solvent like odor. Results of the sample analyses indicated the following:

The unsaturated soil sample exhibited the following Part 201 Criteria exceedances:

- Groundwater-Surface Water Interface Protection Criteria (GSIPC) – xylenes, phenanthrene
- Drinking Water Protection Criteria (DWPC) – n-propylbenzene, n-butylbenzene, sec-butylbenzene
- DWPC and GSIPC – 1,2,4-trimethylbenzene and 1,3,5-trimethylbenzene

The saturated soil sample exceeded the GSIPC for 1,2,4-trimethylbenzene. The unsaturated sample was collected from the smear zone, as the water table elevation varies by up to 3 feet in this area seasonally. The analytical laboratory report for the aforementioned soil samples was provided by SME and is included in Attachment A.

Demolition activities included the removal of basement foundation walls and associated sheet piling to only four feet below the final proposed grade. The basement floors in the northern former plant area near AOI 6 were not cracked during demolition to eliminate groundwater infiltration upward into the area. The presence of the basement foundation walls, sheet piling, and basement floor in the former northern plant area reduces the volume of groundwater flow through the area of potential residual LNAPL. However, the southern former plant basement area floors were cracked prior to backfilling. The approximate location of the remaining basement foundation sheet pile walls are identified on Figure 1. The approximate location of the area containing potential residual LNAPL is identified on Figure 2.

Demolition activities concluded in September 2012 and, as a result, all monitoring wells in this area were destroyed. Three monitoring wells, MW44-12 (replaces 85-5B), MW45-12 (replaces MW18-10) and MW50-12 were installed in 2012 to replace the wells destroyed during demolition activities. Additional locations installed in 2012 outside the AOI 6 boundary include the following: MW46-12 (replaces 86-1); MW51-12; and MW52-12. Current monitoring activities in AOI 6 consist of semi-annual groundwater monitoring including sampling for SVOCs in select wells and well gauging. Measureable in-well LNAPL thicknesses have not been noted in any wells since 2007; however, trace LNAPL (sheen) has been noted periodically in MW44-12, MW45-12, MW50-12, MW51-12, and MW52-12. Table 1 presents a summary of the historical in-well LNAPL thickness measurements for AOI 6. The monitoring well locations and area of observed LNAPL during demolition are shown on Figure 1. Table 2 presents a summary of groundwater sample analytical results for samples collected in the monitoring wells associated with AOI 6 and the nearby observed LNAPL.

LNAPL Evaluation

The MDEQ's NAPL Characterization, Remediation, and Management for Petroleum Releases resource document (MDEQ NAPL Resource Document) and the LNAPL remedial/management decision-making process developed by the RACER Trust (in partnership with MDEQ) are based upon the development of a technically sound LNAPL Conceptual Site Model (LCSM) that contains the appropriate amount and kinds of data necessary to evaluate potential remedial drivers and remedial/management strategies. A detailed LNAPL evaluation was completed for the AOI 6 LNAPL area consistent with the MDEQ's NAPL Resource Document (provided in Attachment B) and RACER's LNAPL remedial/management process (or 'Decision Tree' – provided Attachment C). Generally, the MDEQ NAPL Resource Document and Decision Tree assist with identifying acceptable remedial actions based on site-specific conditions.

LNAPL Conceptual Site Model

The LCSM is the body of information describing aspects of the LNAPL and site setting necessary to satisfy the LNAPL remedial/management objectives (ASTM, 2007; ITRC, 2009). An LCSM includes both "scientific" information regarding the LNAPL, soil and site conditions/setting, and "other" considerations and factors that are necessary to establish the true remedial drivers (risk-based or non-risk factors) for the area in question. The remedial drivers, in turn, are used to establish the overall LNAPL remedial/management objectives, and follow-up technology-specific goals, metrics and endpoints, where applicable.

The LCSM may be comprised of some or all of the following scientific and technological information:

- Release history
- Remedial history
- Land use (historical and current)
- Geological and hydrogeological information/setting
- LNAPL physical (density, viscosity, interfacial tensions) and chemical properties (fingerprinting, constituents, mole fractions, etc.) characteristics
- LNAPL spatial distribution (vertical and horizontal delineation)
- Potential exposure scenarios
- LNAPL mobility/recoverability information
- LNAPL stability information

The more pertinent elements of the LCSM for AOI 6 are summarized below:

Release History

The LNAPL in AOI 6 is believed to be the result of undocumented releases of hydraulic oil and mineral seal oil and/or mineral spirits over time, which were used in processes in this portion of the plant for approximately 50 years prior to discovery during excavation activities in 1985. There have been additional observations of LNAPL in the vicinity of the LNAPL area consisting of hydraulic oil; however, the occurrence of observations of hydraulic oil during well gauging have been limited to monitoring well locations MW18-10 (formerly 85-3) and 85-5B. Consequently, the most likely scenario is that the head of the release that might have driven migration has long since dissipated. Well gauging data confirm the lack of any significant LNAPL head (i.e., no measurable amount of LNAPL is present to indicate the potential for migration).

Remedial History

A significant portion of the LNAPL impacts would have been removed during plant modernization activities in 1985 that involved excavation in the area to the water table (approximately 20' in depth). In the past, GHD tried to conduct a drawdown test to accumulate sufficient volume of LNAPL from the well where it was observed on a more regular basis (85-3), but insufficient volume was present for sample collection and "fingerprinting." Subsequent to the drawdown test, a passive skimmer was placed in 85-3 and it was again unable to collect a sufficient volume of LNAPL.

Following demolition of the plant in 2012, additional monitoring wells were installed to replace destroyed wells. Continued monitoring of these wells does not indicate the presence of measurable product; however, a sheen has been observed in two of the replacement wells (within AOI 6) as well as 2 additional locations which were not previously included in LNAPL monitoring activities. Prior to the installation of the monitoring wells in 2012, no product had been observed since 2007.

Land Use

The AOI 6 LNAPL area is within the confines of a former heavy industrial site with any future land use restricted to non-residential. The City of Wyoming provides potable water to the Site and surrounding areas from the City of Wyoming Drinking Water Plant located in Wyoming, Michigan. The water source for the City of Wyoming Drinking Water Plant is Lake Michigan. As such, the shallow groundwater at the Site is not used as a potable water supply and there are no known users of shallow groundwater in the vicinity of the Site.

LNAPL Properties

The LNAPL consists of mineral seal oil and/or mineral spirits, as well as hydraulic oil, according to Site historical data. The volatility of the LNAPL is expected to be low currently given the significant weathering/degradation that would have taken place during the 28+ years it has been in the ground. The recent boring logs (provided in Attachment D) seem to confirm the low volatility of the LNAPL based on the infrequent/low level PID readings noted during installation of the most recent wells. Dissolution and volatilization of LNAPL constituents would therefore be expected to be limited.

LNAPL Spatial Distribution

The extent of the LNAPL area has been delineated via monitoring wells. Potentially mobile LNAPL (i.e., LNAPL in wells) has been noted historically in wells MW46-12/86-1, MW45-12/MW18-10/85-3, 85-6, MW44-12/85-5B, MW51-12 and MW52-12. No measurable LNAPL thickness has been observed at any of the monitoring locations since 2007. The current extent of potentially mobile LNAPL (based on current wells where sheen has been observed) is at least 200 feet from the nearest property line. The boring logs indicate the extent of LNAPL is approximately 17-25 feet below ground surface (bgs).

LNAPL Mobility and Recoverability

The 1985 excavation activities likely removed the bulk of the potentially mobile/recoverable LNAPL. Nonetheless, the current presence of LNAPL in wells indicates a theoretical presence of mobile LNAPL. However, the fact that the only observations of LNAPL since 2007 have been sheens (as opposed to more significant measureable accumulations) indicates a de minimis mobility condition. The fraction of the overall LNAPL area represented by the observed sheens that might be mobile will be negligible. Given the de minimis mobility condition and the fact that a sheen does not constitute sufficient LNAPL to evaluate recoverability (via estimation of LNAPL transmissivity), it is also concluded that the recoverability of the LNAPL is de minimis.

LNAPL Area Stability

In general, the driving mechanism for LNAPL migration is the LNAPL head that exists during and shortly after a release. It is commonly believed that the hydraulic gradient "causes" LNAPL to spread. However, the reality in most cases is that the hydraulic gradient will not cause LNAPL spreading; rather, it will only influence the preferred direction of spreading where a sufficient LNAPL head exists to drive the migration. Experience has shown that the LNAPL head will dissipate relatively quickly following the cessation of a release, with most LNAPL bodies achieving overall stability (stable perimeter/footprint) within a few years. Localized areas of mobile/recoverable LNAPL may still exist within the LNAPL area at this point; however, the overall footprint of the LNAPL area will not expand further.

The older the LNAPL area, the more likely it will be stable. This is partly due to the dissipation of the LNAPL head, and partly due to the seasonal fluctuations in the water table that will "smear" the LNAPL or spread the now fixed volume of LNAPL over larger vertical extents over time. Smearing causes a progressive decrease in localized LNAPL saturations and, consequently, the mobility potential of the LNAPL. Based solely on the time since there was any possibility of an active release (at least 28 years), the LNAPL would be expected to be stable overall (i.e., not migrating). The well gauging history that indicates no measureable levels of LNAPL in wells since 2007 and the associated conclusion that the LNAPL is effectively immobile everywhere within the LNAPL area confirm the overall stability of the LNAPL area.

Potential Exposure Scenarios

The available historical groundwater analytical data are summarized and compared against the generic Part 201 Criteria in Table 2. These results indicate that exceedances of generic criteria were noted historically for volatile organic compounds (VOCs) and SVOCs for the groundwater/surface water interface (GSI) and drinking water pathways. However, these are not considered relevant pathways for the following reasons:

- Drinking Water Pathway: This pathway is not relevant based on the following points:
    - Groundwater is not used as a source of drinking water for the City of Wyoming
    - A restrictive covenant is in place for the Site which restricts the use of groundwater beneath the Site for any purpose
- GSI Pathway: This pathway is not relevant based on the following points:
    - The AOI 6 LNAPL area will not directly impact the nearest surface water bodies since it is stable and is a significant distance from the Cole Drain and Plaster Creek
    - All subsurface utilities in the area of AOI 6 were destroyed or plugged as part of demolition activities, eliminating any potential conduit for LNAPL or impacted groundwater to surface water

Considering these points and the preceding LCSM discussion, the GSI and drinking water pathways are not currently relevant pathways nor will they become relevant in the future. It is also noted that groundwater quality would only be expected to improve over time due to the lack of new releases and the fact that natural source zone depletion processes (NSZD) will act on the LNAPL such that it will only become progressively less soluble over time.

As previously noted, the LNAPL would not be expected to present soil gas concerns. This is perhaps best-evidenced by boring logs for the area that do not exhibit elevated photoionization detector (PID) readings where LNAPL is observed in the soil. Similar to dissolution potential, NSZD processes will also progressively reduce the volatility of the LNAPL over time. In addition, any concerns relating to vapor intrusion are effectively mitigated by the Site restrictive covenant, which requires the use of vapor intrusion barriers in any future construction.

Direct contact is not currently a relevant pathway due to the depth of impacts (approximately 17-25 feet bgs based on boring logs). This is consistent with the excavation of this area which was completed to 20 feet bgs. It is also unlikely that any future site redevelopment will require excavation to that depth. As with the other potential exposure scenarios described herein, any potential future direct contact issues are addressed through the Site restrictive covenant.

Evaluation of Potential Remedial Drivers

Similar to ITRC, MDEQ considers two types of risks with respect to the presence of LNAPL: compositional risk and saturation-based risk. Compositional risks represent the 'traditional' risk concerns associated with groundwater, direct contact or soil gas-related exposures. Compositional risks therefore represent concerns where a change in LNAPL chemistry may be advantageous to limit dissolution, volatilization, etc. of petroleum constituents. Examples of compositional change techniques include enhanced biodegradation, in-situ chemical oxidation and air sparging. Saturation-based risk primarily relates to the potential for LNAPL migration into areas not already impacted where the reduction of LNAPL saturations may be warranted. Saturation-based remedial techniques are therefore based on the mass recovery of LNAPL.

As indicated above, the typical compositional risks associated with the presence of LNAPL would be unacceptable levels of dissolved phase contamination, potential for direct contact, or soil vapor concerns. As noted in the LCSM discussion, there is no current or anticipated future risk with respect to dissolved and/or vapor phase impacts or direct contact pathways and any potential future risk is mitigated through the restrictive covenant. It is noted that the restrictive covenant also represents a more sustainable approach to LNAPL management since it does not involve the resource usage, emissions (direct or indirect) or remediation risk that are typically generated with engineered remedies.

As previously discussed, all indications are that the LNAPL is stable/non-migrating and immobile from a practical standpoint. Therefore, there is no saturation-based risk.

The pathway through the draft RACER LNAPL decision-making framework resulting from the preceding discussion is illustrated in Attachment E along with the associated decision-making rationale for each decision point.

LCSM Summary

In summary, the following list represents the most pertinent points of the LCSM:

- The LNAPL is a mineral seal oil/mineral spirits fuel type
- The LNAPL is effectively immobile, unrecoverable and stable/non-migrating overall
- There are no current unacceptable exposure scenarios associated with the LNAPL in place
    - No applicable compositional remedial drivers
- The Site restrictive covenant will effectively mitigate any potential future exposures (Attachment F)

Recommendations

Based on the assessment presented herein, no current or future compositional or saturation-based risks associated with the LNAPL at AOI 6 are expected. Consequently, no further evaluation activities are anticipated to be required.

Notes:
Thickness measurements are in feet
-- Not measured
[1] Initiated use of keck interface probe for all product measurements.
[2] Well IDs in parentheses (i.e. (MW18-10)) represent previously installed MWs that were abandoned or destroyed
[3] Monitoring well 85-3 was installed such that the well screen did not straddle the water table at all times (screen was submerged during seasonal water table flucuations). MW18-10 was installed to correct this issue and 85-3 was abandoned.

Notes:
[1] MDEQ Generic cleanup criteria for residential and nonresidential category, administrative rule R 299.46 and R 299.48, respectively, effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended
[2] Carbonate hardness of 344 mg/L was used to calculate Groundwater-Surface Water Interface Criteria.
U - Not detected at the associated reporting limit.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
B - Result detected in associated method blank.
J - Estimated concentration.
ID - means insufficient data to develop criterion.
NA - means a criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - means hazardous substance is not likely to leach under most soil conditions.
NLV - means hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria.
Superscript letter denotes the criterion exceeded.

Fibertec
environmental
services

Tuesday, May 15, 2012

Fibertec Project Number: 49973
Project Identification: Former GM Stamping Plant Wyoming,MI/064270.00.007
Submittal Date: 05/14/2012

Mr. Casey Smith
Soil and Materials Engineers, Inc. - Grand Rapids
4705 Clyde Park Avenue, SW
Grand Rapids, MI 49509-5114

Dear Mr. Smith,

Thank you for selecting Fibertec Environmental Services as your analytical laboratory. The samples you submitted have been analyzed in accordance with NELAC standards and the results compiled in the attached report. Any exceptions to NELAC compliance are noted in the report. These results apply only to those samples submitted. Please note samples will be disposed of 30 days after reporting date.

Samples were received at 10.6 degrees Celsius.

If you have any questions regarding these results or if we may be of further assistance to you, please contact me at (517) 699-0345.

Sincerely,

Daryl P. Strandbergh
Laboratory Director

DPS/kc

RRD RESOURCE MATERIALS-25-2014-01
June 2014

In order to promote a consistent and informed approach for Michigan Department of Environmental Quality (MDEQ) staff, this document was developed to provide information to MDEQ staff and contractors for characterizing, remediating and managing non-aqueous phase liquids (NAPL) related to petroleum releases.

This document is available as a technical reference to assist any party conducting investigations and evaluating NAPL associated with petroleum releases to support recovery and risk management decisions.

This document is explanatory and does not contain any regulatory requirements. It does not establish or affect the legal rights or obligations for petroleum NAPL management. It does not have the force or effect of law and is not legally binding on the public or the regulated community. Any regulatory decisions made by the MDEQ regarding NAPL management related to petroleum releases will be made by applying the governing statutes and Administrative Rules to relevant facts.

SUMMARY

This document is provided as a resource for MDEQ staff and other environmental professionals working on characterizing, remediating, evaluating risk, and managing non-aqueous phase liquids (NAPL) resulting from releases of petroleum products to the environment.

The state of Michigan has thousands of sites that are contaminated with petroleum NAPL. These petroleum-based liquids have limited solubility in water and can degrade over time, but typically will remain in the subsurface for many years. The presence of NAPL in the subsurface can lead to unacceptable risks to human health and the environment if improperly characterized, remediated, and/or managed. However, unacceptable risks can be avoided using appropriate management practices that will reduce NAPL toxicity, remove constituents of concern, recover the NAPL, and/or prevent exposures. Characterization of the NAPL, both chemically and geographically, and the identification of all associated risks is critical for developing a conceptual site model (CSM) and implementing an effective and efficient remedial and management strategy. Conceptual site models (CSM) are communication tools that can provide a clear understanding of the characterization, site conditions, and risks.

In some cases, recovery or remediation of the NAPL is necessary to abate risks. The NAPL management decisions will be risk-based, but if mobile NAPL is present at a site and can be easily recovered in an efficient and cost effective manner, then the MDEQ encourages recovery of the NAPL wherever feasible. Recoverability analyses can aid in the decision making and have been demonstrated to be beneficial for determining how much NAPL may be removed and what remedial strategy may be most effective.

The factors outlined above are also important in achieving the goal of closure or no further action for a petroleum release. When the geographic location, chemical composition, and risk posed by the petroleum NAPL are well characterized and documented with a CSM, the resulting risk-based decision making is more protective, efficient, and cost effective.

1.0 INTRODUCTION

The non-aqueous phase liquid (NAPL) and management approaches referred to throughout this document are limited to only petroleum. Petroleum and petroleum compounds are commonly used in many industries and applications across the state. Given their widely-used nature, petroleum releases have occurred from a multitude of sources. Sources of petroleum releases include, but are not limited to, releases from oil and gas exploration and production, bulk storage, refining operations, retail sales (underground storage tanks), pipelines, home heating tanks, and industrial/manufacturing operations. Thousands of sites across the state of Michigan have documented releases of petroleum NAPL to the environment that will need to be addressed under statutory requirements, which includes the proper characterization, remediation, and/or management of the NAPL so that it does not pose an unacceptable risk to human health and the environment.

The scope of this document is to describe concepts for NAPL management. The document, in general terms, is broken into the following categories for NAPL management:

- *NAPL and Management Concepts*
- *NAPL Characterization*
- *Conceptual Site Model (CSM)*
- *Risk Assessment*
- *Recovery and Recoverability*
- *Site Closure*

It is not the intent of this document to provide a detailed discussion of every NAPL concept or strategy. A list of selected references, some of which provide a more thorough discussion of the concepts presented in this document, is presented in Appendix A.

In addition, a number of technical terms are used throughout this document when describing various aspects of NAPL assessment and management; this also includes terms used in certain statutes. A glossary of these and other commonly used terms and their definitions/applications are contained in Appendix B. Finally, the information contained in this document reflects basic concepts that are applicable to sites where only petroleum releases have occurred and reflect typical approaches to NAPL management. These approaches and concepts were reviewed by a number of external stakeholders and environmental professionals and where applicable, the comments were incorporated into this document. Appendix C is a list of external stakeholders whose review was sought for the development of this document.

2.0 NAPL and MANAGEMENT CONCEPTS

Basic NAPL concepts have been adapted from publications and training prepared by the Interstate Technology & Regulatory Council (ITRC) and ASTM International (ASTM). More detail on basic NAPL concepts is included in Appendix D.

The NAPL Management Strategy is based on three primary concepts:

1) The presence of NAPL should be assumed when there is a known release of petroleum **AND/OR** sustained subsurface petroleum contamination is detected (e.g. sustained vapor or groundwater plumes) **AND/OR** NAPL has been visually observed (e.g. accumulating in a well or excavation). In general, if NAPL was released at a site ("site" in this document is a general term), it is likely present as residual, mobile, and/or migrating NAPL.

2) There are two general stages in the development of the NAPL body after a release: i) the initial or expansion stage, which is generally relatively short in duration after the release has stopped, when the NAPL is actively migrating under a sufficient NAPL gradient; and ii) a stable stage, which is much longer in duration, when migration is minimal to nonexistent after the hydraulic forces driving lateral NAPL migration have declined relative to counteractive mechanisms (e.g. entry pressures, decreasing gradient, etc.) (MPCA, 2010).

3) The NAPL body may act as a long-term origin of chemicals of concern (COC) for the aqueous (dissolved) and vapor phases, referred to as compositional plumes. The NAPL body generally contains much more COC mass than is present in the dissolved and vapor phase, and contains a finite mass of COC. The dissolution or volatilization of the COC from the NAPL body into other phases is the primary mechanism by which most NAPL bodies create unacceptable risks over time. Dissolution, volatilization, and biodegradation, collectively known as natural source zone depletion (NSZD), of COCs from the NAPL body will also deplete the finite over time. The NAPL body may also occasionally release secondary contaminants under certain conditions (e.g. methane), which may result in unacceptable risks.

3.0 NAPL CHARACTERIZATION

The NAPL body and any associated compositional plumes (e.g. soil gas, groundwater) will need to be adequately delineated so that migration can be detected to determine plume stability and all risks, both saturational and compositional conditions can be evaluated (ASTM, 2007, Section 3; ITRC, 2009a, Section 3; ITRC, 2009b, Sections 3 and 4). The composition of the NAPL will need to be determined so appropriate investigative techniques, analytical methods, and risk assessments can be implemented (ASTM 2007, Section 6). NAPL characterization can be accomplished either by conventional means or more modern approaches. Conventional means of investigation include drilling accompanied by soil and groundwater sampling; a contemporary approach may include an ultraviolet optical screening tool/laser-induced fluorescence (LIF).

The risk assessment at a site generally requires conventional investigative means to compare concentrations of COCs to risk-based screening levels, and/or generic criteria. Other conventional means of characterization such as analysis of soil for total petroleum hydrocarbons (TPH), gasoline range organics (GRO), diesel range organics (DRO), and/or oil range organics (ORO), can be useful because they allow estimation of the degree of NAPL saturation at a specific, three-dimensional location. Refer to Table 1 below for GRO and DRO concentrations that may be used for screening purposes with soil samples or as a line of evidence. Screening concentrations have not been developed for ORO; however, site specific screening values can be developed using the individual soil and NAPL properties and possibly other lines of evidence. GRO and DRO concentrations greater than those in Table 1 are not automatic indicators of the presence of NAPL or the presence of an unacceptable risk. Additional lines of evidence may be used to determine the presence or absence and/or potential risks posed by the NAPL. These additional lines of evidence can be collected in conjunction with or in lieu of the TPH sampling. There is no prescriptive approach to site characterization because each site and release is unique. Previous site information, geologic and hydraulic information, and release information should guide the characterization phase.

Table 1 – GRO and DRO Screening Levels

Material Released / NAPL	Use / Screening Purpose	GRO Concentration (mg/kg)	DRO Concentration (mg/kg)
Gasoline	NAPL not present	≤ 250	N/A
Gasoline	Soil Volatilization to Indoor Air Criteria Applicable	≤ 350	N/A
Gasoline	<0.5% Saturation for Direct Contact	≤ 900	N/A
Diesel	NAPL not present	N/A	≤ 20
Diesel	Soil Volatilization to Indoor Air Criteria Applicable	N/A	≤ 500
Diesel	<0.5% Saturation for Direct Contact	N/A	≤ 1,050

Regardless of the characterization methods used at a particular site, once characterization is complete, it should be evident where the NAPL is located (including below the water table) and its state (residual, mobile, and/or migrating). The presence or absence of NAPL is best determined by multiple lines of evidence. However, one line of evidence is not necessarily superior to another. The weight given to a particular line of evidence would be based on the type of NAPL released and the unique site conditions. Upon completion of the investigation, the location, nature, and extent of the compositional plumes would be well understood.

4.0 NAPL CONCEPTUAL SITE MODEL

It is imperative in risk-based decision making that an adequate CSM is developed and utilized. The ASTM *Standard Guide for Development of Conceptual Site Models and Remediation Strategies for Light Non-aqueous Phase Liquids Released to the Subsurface* (ASTM 2531) was created to guide the development of a CSM for NAPL. As outlined in ASTM 2531, the CSM is developed using site data for the purpose of assessing risks at a site. Some examples of items to include in a CSM are depth to groundwater, location of the NAPL body, locations of any and all receptors, dissolved phase (groundwater) plume location, and vapor plume locations. For a detailed outline, list of elements commonly incorporated in a CSM, and discussion of the CSM development, refer to ASTM E2531-06 (Sections 6 and 7). The CSM is a dynamic document. As additional data is collected, the data is evaluated in the context of the CSM and appropriate modifications are made to the CSM as needed (ASTM, 2007, Sections 3.1.19.1 and 4.1). The CSM for each release and each site will be unique. The CSM could be developed using existing site data, or it may require new data collection to adequately characterize and understand the risks posed by the release. The land use and the potential risks posed by a site will determine the precision and amount of data necessary to complete the CSM. The CSM, at a minimum, can be made up of **tables** summarizing soil and groundwater contamination and groundwater elevations; **text** describing and summarizing the data and data collection; **boring logs** with lithology, field screening information (e.g. photoionization detector), and any relevant field observations; **hydrographs** showing the NAPL thickness in wells vs. corrected groundwater elevations (if mobile NAPL is observed at a site) and dissolved phase concentrations vs. groundwater elevations; **plan view maps** showing the NAPL body, contaminant distribution, groundwater elevation,

current/future buildings, property boundaries, and other potential receptors; and **cross-sectional maps** showing the NAPL body, groundwater elevations, lithology, contaminant distribution, and potential receptors. The CSM is also useful for identifying any data gaps and evaluating the potential effect they may have on site decision making.

The development and submission of a site-specific CSM improves the understanding of site conditions, potential receptors, and risks and serves as an excellent tool for communicating this information to all parties and stakeholders involved in site decisions. Graphical representations of the CSM are a very efficient way to depict the site and any associated risks. The use of three-dimensional data visualization software (e.g. fence diagrams) and/or volume/mass calculators (e.g. API's LNAPL Distribution and Recovery Model) may also be useful tools for the CSM.

5.0 NAPL RISK ASSESSMENT

Once the site is adequately characterized and a site-specific CSM is developed, the important steps of identifying and evaluating the saturational (e.g. presence of migrating NAPL) and compositional risks (e.g. soil gas or groundwater contaminant plumes) follows. This step is useful for identifying any unacceptable risks that would require some type of recovery, remediation, mitigation, exposure control, and/or other means necessary to abate risk(s).

Generic risk-based screening levels (RBSLs) and cleanup criteria have been developed to evaluate potential compositional risks for individual hazardous associated with various exposure pathways. Development of the generic RBSLs and cleanup criteria are based on assumptions regarding exposures, soil and site conditions, and the environmental fate-and-transport of contaminants. Generally, these assumptions do not account for the presence of NAPL in the soils at a site. However, the RBSLs and cleanup criteria may be used to assess risks at sites with NAPL present, but with certain pathways (direct contact and soil volatilization to indoor air) appropriate lines of evidence are necessary to determine applicability.

For exposure pathways that evaluate risk associated with the volatilization of hazardous substances from soil, the absence of NAPL was assumed in the calculations of the RBSLs and cleanup criteria. However, soil analytical data can be compared to the soil volatilization to indoor air inhalation criteria (SVIIC) if either NAPL is not present at that three dimensional location or there is a relatively minor amount of NAPL in the soil so that it can be assumed that aerobic degradation of the petroleum vapors in the soil can occur. Generic SVIIC RBSLs or cleanup criteria may be appropriate for use when GRO concentrations are less than 350 mg/kg for a gasoline release and when DRO concentrations are less than 500 mg/kg for a diesel release and mobile NAPL is not present at that location.

If the concentrations are less than SVIIC and they are applicable (consistent with all assumptions used to calculate the RBSLs or criteria), then no further investigative actions are needed even if residual NAPL is known to exist in the area proximal to the location of evaluation. If mobile NAPL is known to exist in the area proximal to the location of evaluation, then a site-specific risk evaluation would be necessary to evaluate the risk. For a risk assessment of indoor air when NAPL is known to exist, the use of direct measurements (e.g. soil gas) is better and more reliable to assure the protection of public health, especially when the generic assumptions used to calculate criteria are not representative of the site conditions. For the ambient air pathway, if the soil concentrations are lower than the criteria, the assessment is complete. The CSM can be utilized to evaluate the pathways, determine where generic criteria are applicable, and/or determine the need for additional data collection. Additional information regarding vapor intrusion assessment at NAPL sites is provided in Appendix E.

Soil direct contact RBSLs and cleanup criteria may not be appropriate for risk evaluation when mobile NAPL is present and when greater than 0.5% of the soil pore space contains residual NAPL (a degree of saturation that at or below can be reliably assumed to always be residual). Also, at or below this degree of NAPL saturation, this amount of NAPL in the soil is not expected to be significant enough to physically change the soil properties assumed in the direct contact algorithm (e.g. adhesion to skin and intestinal absorption). If the saturation of NAPL in the soil exceeds 0.5% in the pore space or mobile NAPL is present, then the assumption is that a direct contact risk is present at that location unless a site-specific evaluation demonstrates otherwise. The CSM can be utilized to evaluate the pathway, determine the need for additional data collection, and/or conduct a site-specific risk evaluation. Additional information regarding direct contact pathway evaluation at NAPL sites is provided in Appendix F.

6.0 NAPL RECOVERY AND RECOVERABILITY

The most cost-effective and efficient way to address new releases is to immediately recover as much NAPL as technically feasible when it is discovered. Generally, practical experience has demonstrated that this will provide the greatest amount of recovery, reduce risk, and save time and money for all parties involved. Once recovery of NAPL associated with a new release is complete, processes outlined in this document may be used to evaluate whether additional recovery is needed, what the threshold for recoverability may be for that release, and aid in the determination of the management practices for the remaining NAPL.

At sites where NAPL is present (which is the majority of sites where NAPL was released), conducting a recoverability analysis allows for better site decisions to be made. A recoverability analysis, which can be conducted for all NAPL, including residual, is a useful tool for determining the quantity of NAPL that may be recovered (hydraulic, excavation, etc.) as well as reviewing recoverability as a part of the overall site and risk assessment. For the recoverability analysis to be the most useful, it should take into account the feasibility of NAPL recovery, current and potential future risks posed by the NAPL, current and future land uses, and other pertinent site factors. Environmental factors, such as the potential seasonal changes in recoverability may make data from multiple events or during different seasons necessary to identify any seasonal affects and complete the analysis (e.g. NAPL could be recoverable during periods of low groundwater elevation and not recoverable during wet seasons with high groundwater elevations). Scientific studies, experience, and risk assessment have shown that in many cases all NAPL cannot be recovered and, in some instances, no recovery is necessary. Consistent with all risk-based corrective actions, if the NAPL (any states) and/or associated COC pose an unacceptable risk (e.g. expanding soil gas and groundwater plumes, threatened receptors, etc.), then the portion of the NAPL body or COCs creating the risk will have to be addressed via removal, destruction, toxicity reduction, and/or exposure elimination (e.g. institutional controls). For exposure elimination to be a feasible option, the NAPL body and all compositional plumes should be stable.

If mobile NAPL is present at a thickness greater than 0.2 feet in monitoring wells, transmissivity testing is a suitable tool to help determine recoverability. NAPL transmissivity is an indicator of the ability of the NAPL to flow in the subsurface and is a function of both the media and the NAPL properties. For more information on NAPL transmissivity, see ASTM E2856-11, *Standard Guide for Estimation of LNAPL Transmissivity*. In general, if the transmissivity of the NAPL is greater than 0.5 ft^2/day, recovery is beneficial to reduce the saturation and the ability of the NAPL to flow and the NAPL can be recovered

in a cost effective and efficient manner. However, a demonstration may be made to show that recovery may not be necessary if the NAPL and risks can be appropriately managed.

Factors that comprise a recovery demonstrations may include, but would not be limited to, composition of the NAPL, net benefit of NAPL recovery (e.g. environmental and/or societal), costs, distance to property boundaries, distance to nearest receptors, plume stability, and uncertainties. See ASTM 2531-06 Section 7.12 and ITRC 2009b Section 4 for descriptions of NAPL recovery metrics. The metric of transmissivity for NAPL recovery is a secondary metric and would be utilized after the risks are adequately abated, removed, and/or managed since the primary metric for remediation, exposure elimination, and recovery will be determined by the risks at a site. In some cases, the recovery of NAPL that results in transmissivity below 0.5 ft^2/day may not reduce the risks at a site; however, this will likely reduce the length of time it takes for a site to attenuate (reduce the legacy of the site). Both ASTM and ITRC guidance advocate for setting sound NAPL remedial objectives consistent with a CSM, using a systematic, science-based approach to select the most suitable NAPL remediation technology(ies), and implementing the technology(ies) to the fullest benefit (ASTM, 2007, Section 7.5; ITRC, 2009b, Section 1.5).

Federal law, 40 CFR 280.64, requires NAPL recovery to the "maximum extent practicable" (determined by the implementing agency) with a minimum standard of minimizing migration. The MDEQ interprets "maximum extent practicable" to mean the recovery of all NAPL that can be recovered in a cost-effective and efficient manner. Again, if the NAPL has a transmissivity greater than 0.5 ft^2/day, it is likely that the NAPL can be recovered in a cost-effective and efficient manner unless a demonstration is made to show otherwise. If migrating NAPL is present at a site, recovery and/or containment are necessary to stop or prevent migration.

7.0 NAPL AND NO FURTHER ACTION OR CLOSURE

No further action or closure is achievable at sites where residual and/or mobile NAPL are present and risks are abated or managed. Demonstration that risks are appropriately abated or managed include the following: 1) recoverable NAPL has been recovered to the "maximum extent practicable;" 2) all unacceptable risks (e.g. expanding plumes, exposed or threatened receptors) have been abated; and 3) proper institutional controls are recorded on the deed, if necessary, to notify current and future property owners of the presence of NAPL and to ensure that land use changes do not alter site conditions without proper evaluation. Providing data for these demonstrations that clearly indicate all plumes and the NAPL body are stable or decreasing in size and mass will generally allow for a more efficient and expedited review of the documentation. The amount and timing of the data, as well as the length of time required for monitoring, is dependent upon the risks, the proximity to potential receptors, and the proximity to property boundaries.

Since the environment is dynamic, there may be some expected transient or seasonal expansions and contractions in plume sizes. Any transient expansions should be insignificant when compared to the distance to receptors and property boundaries. Risk-based assessments for sites with mobile NAPL may be more complex with additional data collected that is necessary to support the conclusions, account for potential uncertainties, and assure that the risks are properly managed. However, the data necessary to support risk abatement and management are based on site-specific conditions and are most effectively communicated in a clear, concise CSM.

Definitions/Terminology

The following terms are defined and if used for assessment, correspondence, and documentation of petroleum release sites regulated under NREPA will aid in clearer communions. When appropriate, a brief discussion of how these terms relate to light NAPL (LNAPL) or petroleum NAPL follows the definition (Note – The Part 213 statutory definitions are in all **CAPS** and **BOLD** text).

- **NAPL --** ***MEANS A NONAQUEOUS-PHASE LIQUID OR A NONAQUEOUS-PHASE LIQUID SOLUTION COMPOSED OF 1 OR MORE ORGANIC COMPOUNDS THAT ARE IMMISCIBLE OR SPARINGLY SOLUBLE IN WATER. NAPL INCLUDES BOTH DNAPL AND LNAPL.***

- **LNAPL --** ***MEANS A LIGHT NONAQUEOUS-PHASE LIQUID HAVING A SPECIFIC GRAVITY LESS THAN 1 AND COMPOSED OF 1 OR MORE ORGANIC COMPOUNDS THAT ARE IMMISCIBLE OR SPARINGLY SOLUBLE IN WATER, AND THE TERM ENCOMPASSES ALL POTENTIAL OCCURRENCES OF LNAPL.***

    - This term addresses all states of LNAPL. It should only be used conceptually and generically in regards to LNAPL issues. Use of this term in lieu of the term free product should be avoided and instead the more descriptive terms residual LNAPL, mobile LNAPL, and migrating LNAPL should be applied.

- **'MIGRATING NAPL' – MEANS** ***NAPL THAT IS OBSERVED TO SPREAD OR EXPAND LATERALLY OR VERTICALLY OR OTHERWISE RESULT IN AN INCREASED VOLUME OF THE NAPL EXTENT, USUALLY INDICATED BY TIME-SERIES DATA OR OBSERVATION. MIGRATING NAPL DOES NOT INCLUDE NAPL THAT APPEARS IN A WELL WITHIN THE HISTORICAL EXTENT OF THE NAPL DUE TO A FLUCTUATING WATER TABLE.***

    - Migrating petroleum NAPL occurs when the vertical and/or horizontal extent of this NAPL is expanding. It is only likely to be present shortly after a release occurs or if the release is ongoing. However, site-specific conditions or changes in site conditions may allow petroleum NAPL to migrate for extended periods of time. All migrating petroleum NAPL is also mobile NAPL.

- **MOBILE NAPL --** ***MEANS NAPL THAT EXCEEDS RESIDUAL SATURATION, AND INCLUDES MIGRATING NAPL, BUT NOT ALL MOBILE NAPL IS MIGRATING NAPL.***

    - The term mobile NAPL can be used when petroleum NAPL is present and is at a high enough saturation to be hydraulically connected in the pore spaces so that it can flow. If a well is placed in a location with mobile petroleum NAPL present, this NAPL will accumulate in the well. Mobile petroleum NAPL has the potential to move or expand its footprint, but it is not spreading vertically or laterally. Mobile petroleum NAPL is potentially hydraulically recoverable, but recovery depends on several factors. Examples of mobile petroleum NAPL include: NAPL first observed to accumulate in a well or boring at a site prior to completion of a conceptual site model (CSM), or petroleum NAPL observed in a well due to a change of water levels.

- **RESIDUAL NAPL SATURATION --** ***MEANS THE RANGE OF NAPL SATURATIONS GREATER THAN ZERO NAPL SATURATION UP TO THE NAPL SATURATION AT WHICH NAPL CAPILLARY PRESSURE EQUALS PORE ENTRY PRESSURE AND INCLUDES THE MAXIMUM NAPL SATURATION, BELOW WHICH NAPL IS DISCONTINUOUS AND IMMOBILE UNDER THE APPLIED GRADIENT.***

    - This defines the saturation below which petroleum NAPL become discontinuous and no longer has the ability to flow (residual NAPL). The petroleum NAPL is essentially trapped in the pores and under normal conditions and gradients, the NAPL will not move. The term residual NAPL is used to describe the state of NAPL below this saturation. This petroleum NAPL cannot be recovered by hydraulic means (e.g. pumping); however, with the use of technologies such as excavation, dual-phase extraction, or air sparge/soil vapor extraction, some fraction of the residual NAPL can be remediated or recovered.

    - This term is used when petroleum NAPL has been released at a site, but other lines of evidence suggest mobile or migrating petroleum NAPL is not present. For example, if a boring log or other evidence (e.g. petroleum staining, high photoionization detector (PID) concentrations, laser-induced fluorescence (LIF), dye tests, etc.) indicates the presence of petroleum NAPL in the soil and/or aquifer material, but a properly developed well installed in the same location does not contain mobile NAPL, the NAPL is residual. If there is a sustained groundwater plume or vapor plume present at a site, but no observed mobile or migrating petroleum NAPL, residual NAPL is present. Residual petroleum NAPL could lead to the appearance of mobile NAPL with changes in site conditions, such as a drop in groundwater elevation.

    - Residual petroleum NAPL can exist above and beneath the water table, and will have to be assessed in both the vadose zone and aquifer for the delineation of the petroleum NAPL body, mass calculations, and the development of the CSM. Residual petroleum NAPL can also be the source of compositional plumes (dissolved phase and/or vapor phase) from the NAPL body.

NOTE: Although ASTM 2531-06 has been incorporated by reference into the amended Part 213, some terms defined within the ASTM standard differ from the terms defined within the amended Part 213 (e.g. mobile NAPL has different meanings in each document – in Part 213 mobile NAPL has the ability to move but in ASTM 2531-06 mobile NAPL is moving). ASTM terms to become familiar with include:

- Free LNAPL – LNAPL that is hydraulically connected in the pore space and has the potential to be mobile in the environment. This is the same as mobile LNAPL as defined in amended Part 213.

- Residual LNAPL – LNAPL that is hydraulically discontinuous and immobile under prevailing conditions. Residual LNAPL cannot move through hydraulic mechanisms (unless prevailing conditions change), but can be a source for chemicals of concern (COC) dissolved in groundwater or in the vapor phase in soil gas.

Appendix C.

Stakeholder List

Below is the list of individuals outside of the Michigan Department of Environmental Quality (MDEQ) who received the Petroleum Non-Aqueous Phase Liquids (NAPL) Management Policy and Procedure. The list also shows external affiliations and if comments were provided.

Stakeholder Name	Affiliation	Provided Comments (Yes/No)
Grant Trigger	Racer Trust	No
Mark Adamski	BP America	Yes
Pete Bosanic / Stephen Zayko	PM Environmental	Yes
Abed Houssari	DTE Energy	No
Cheryl Kehres-Dietrich	Soil and Materials Engineers, Inc.	Yes
John Robbins	Shell Oil	Yes
Sanjay Garg	Shell Global Solutions	Yes
Robert Steede	Enbridge Energy	No
Keith Aragona	Haley Aldrich	No
Curt Roebuck	DLZ Michigan	Yes
Steve Crider	NTH Consultants	No
Brad Koons	ARCADIS	Yes
John Rabideau	AMEC E&I, Inc.	Yes
Erik Johnson	Blarney Castle Oil	No
Mike Wolfe	AECOM Environment	Yes
Joe Berlin	BLDI Inc.	No
Dana Bradt	ATC Associates	Yes
Greg Kernosek	Envirosolutions, Inc.	Yes
Tiffany Yusko-Kotimko	Barr Engineering	Yes
Gary Dyke	CH2MHill	No
Donal Brady	Inland Seas Engineering	Yes
Andrew Kirkman	BP America	Yes

Appendix D.

Basic Petroleum Non-Aqueous Phase Liquids Concepts

The migration of petroleum non-aqueous phase liquids (NAPL) requires that the NAPL displace air and water from the soil pores. It takes less force for NAPL to displace air than water; therefore, NAPL preferentially enters air-filled pores. It takes less pressure for NAPL to enter a larger pore; however, in an air-NAPL system (no water), the NAPL will also be in smaller pore spaces because it is the wetting fluid in that system. Geologic heterogeneity, pore geometry, and the presence and amount of water in the pores all strongly affect NAPL migration. NAPL can migrate below the surface of the groundwater; the depth of submerged NAPL will be determined by the degree of heterogeneity and the NAPL head. NAPL can also be present in perched and hydraulically-confined stratigraphic units in the presence of soil/lithology heterogeneity.

After a release, NAPL infiltrates into the pores and is driven downward by gravitational forces through the unsaturated (vadose) zone. As NAPL migrates through the vadose zone, some will remain immobile and trapped in the pores. This residual NAPL in the vadose zone is part of the NAPL body and can act as a source for compositional plumes. If a sufficient volume of NAPL is released to overcome the holding capacity of the vadose zone, the NAPL will reach the water table and, despite it generally having a lower density than water, can be driven into the saturated zone by the vertical NAPL head. For the NAPL to migrate in the saturated zone, it must first displace the water from the pore spaces. NAPL will continue to migrate downward into pores below the water table until vertical equilibrium is reached; this occurs when the NAPL head (downward force) is less than or equal to the sum of the buoyancy force (with LNAPL only) and the entry pressure of the aquifer pores (upward forces). Vertical equilibrium usually occurs before horizontal equilibrium, and the NAPL will continue to spread laterally until horizontal equilibrium is reached. The vertical and horizontal spread of NAPL is limited by buoyancy, capillary forces, NAPL conductivity, and the declining hydraulic force of the NAPL gradient. The NAPL will persist as a separate phase in the pores within both the vadose zone and saturated zone after the NAPL body is spatially stable. All of the NAPL in all of the states (residual, mobile, and migrating) within the saturated zone and the vadose zone make up the entire NAPL body.

NAPL body behavior can be characterized partly by the NAPL saturation, which is the percentage of total pore volume occupied by the NAPL. The remaining pore volume is occupied by air and water (soil moisture) in the vadose zone, and by water in the saturated zone. At vertical equilibrium in the saturated zone, the relative amount of NAPL in the pores varies with depth, and higher NAPL saturations are usually observed near the top of the saturated zone. Over time and as the groundwater elevation fluctuates, some of the NAPL may be vertically and locally redistributed. Some of the NAPL will eventually become hydraulically disconnected, leaving independent globules of NAPL in some pores. As the NAPL migrates and the degree of saturation of NAPL decreases, the NAPL will approach residual saturation. NAPL saturation at or below residual saturation is neither mobile nor hydraulically recoverable. NAPL saturation above residual saturation is mobile, potentially migrating, and potentially hydraulically recoverable. Even though residual NAPL is not mobile, it can still act as a significant source of contaminant mass for vapor and groundwater plumes. Conversely, in some instances, it is possible that the residual NAPL may not be in contact with groundwater, may not be leaching to groundwater, and may not be a vapor risk and can be left in place using institutional controls, if necessary.

The presence of mobile NAPL in a given well does not necessarily mean that the NAPL body is migrating; the NAPL just has the potential to migrate. In order for migration to occur at the edges of the

NAPL body (expansion), the NAPL head (e.g. potential energy or gradient) must be high enough to overcome the entry pressure of adjacent soil pores. As the NAPL body spreads, the degree of NAPL saturation decreases, which reduces the NAPL conductivity. Once the counteracting mechanisms (decreasing conductivity, decreasing gradient, and entry pressure combined with loss mechanisms of biodegradation, dissolution, and volatilization) are greater than the NAPL head, the NAPL body will eventually become spatially stable under prevailing conditions, even though mobile NAPL may remain in the core of the NAPL body.

The detection of visible or measurable NAPL in a well (analogous to a large soil pore) indicates that some of the NAPL in the immediate vicinity of the well exceeds residual saturation and is mobile. The lack of visible or measurable NAPL in a well does not necessarily mean that there is no NAPL in the vicinity of the well; there may be residual NAPL. Moreover, mobile NAPL may be trapped within the saturated zone due to the stronger force needed to displace water from the pores. That is why NAPL may appear or accumulate in greater volumes in a well after the elevation of the groundwater decreases. Thus, water table fluctuations must be accounted for when evaluating saturations, recovery, and the potential for migration of NAPL. Water table fluctuations also affect NAPL recharge rates and recovery trends.

NAPL will generally contain more mass of the constituents of concern (COC) than what is dissolved in groundwater, volatilized to soil gas, and adsorbed to soil particles; however, the mass contained in the NAPL is finite. Over time, as compounds dissolve, volatilize, biodegrade, and/or adsorb to soil, depletion of COC in the NAPL occurs, which is referred to as natural source zone depletion (NSZD). Determining the rate of NSZD may be useful in making risk-based, recovery, and remedial decisions.

The transmissivity of the NAPL, defined as the volume of NAPL traveling through a unit width of aquifer per time per unit drawdown, can be utilized as a metric for recoverability and aid in remedial decisions. Transmissivity can also be used as part of the conceptual site model (CSM) for delineating and depicting recovery trends; however, transmissivity does not necessarily provide information regarding the risk posed by the NAPL. The NAPL transmissivity is a function of both fluid (e.g. density, viscosity) and media (e.g. permeability, pore saturation) properties. Currently, the collection, assessment, and evaluation of NAPL transmissivity data is relatively new and may be subject to change as more data are collected. There are generally four means of data collection and analysis of NAPL transmissivity: 1) baildown/slug testing; 2) manual skimming; 3) recovery system data; and 4) tracer testing. For a more detailed discussion of the methods and analyses, see ASTM E2856 – 11, *Standard Guide for the Estimation of LNAPL Transmissivity*.

Appendix E.

Assessing Vapor Intrusion Risk at Sites with Petroleum Non-Aqueous Phase Liquids

The presence of petroleum non-aqueous phase liquids (NAPL) in soils can lead to difficulties evaluating the risk associated with the soil volatilization to indoor air pathway, commonly known as vapor intrusion (VI). This is partly attributed to the Michigan Department of Environmental Quality's (MDEQ) use of the Johnson and Ettinger VI model (J&E model) for assessing the risk of this exposure pathway, as well as the evaluation of individual contaminants rather than the multiple contaminants that can occur in NAPL. The United States Environmental Protection Agency (EPA) has identified a number of conditions under which the J&E model may not accurately predict VI risk, which includes the presence of NAPL. There are alternate versions of the J&E model as well as other models, such as the American Petroleum Institute's (API) BioVapor, that have been developed to help assess VI risk associated with NAPL. These alternate models can be utilized with multiple contaminants and also assume some biodegradation of petroleum vapors in the vadose zone; however, the source inputs for the models are groundwater or soil gas contaminant concentrations. As stated in the BioVapor model literature, with residual NAPL in the soil, the model(s) should not be used as a primary line of evidence for risk assessment and may require collection of soil gas data.

The MDEQ developed soil volatilization to indoor air inhalation criteria (SVIIC), assumed to be protective of indoor air. The SVIIC numbers will continue to be utilized to assess VI risk; however, with the inherent uncertainties with any model or calculation or soil gas data is a useful metric to make a direct assessment of the vapor risk. Absent soil gas data, soil analytical data can be compared to the SVIIC values for individual hazardous substances if the soil can be considered to contain a relatively minor amount of NAPL. The MDEQ will consider the SVIIC applicable if NAPL is not present or the concentration of TPH GRO is less than 350 mg/kg for gasoline or TPH DRO is less than 500 mg/kg for diesel. If the other assumptions in the algorithm are appropriate for the site, the soil contains no or relatively minor amount of NAPL and the soil analytical data is less than SVIIC, then no further risk assessment is required, even if residual NAPL is in the area proximal to the location of evaluation. If the soil concentrations exceed the SVIIC (when applicable), the soil is above 350 ppm GRO/500 ppm DRO, and/or mobile or migrating NAPL is present, then additional assessment (e.g. soil gas sampling) or presumptive remedies (e.g. soil vapor extraction or institutional controls) will need to be utilized to evaluate and/or address the pathway.

The collection of representative data is always the most appropriate way to evaluate sites. For various reasons, TPH may not always be collected. If soil TPH GRO data has not been collected, then it can be estimated using the soil benzene, toluene, ethylbenzene, and total xylene (BTEX) data. For a gasoline release, multiply the sum of the BTEX concentrations by 40 to estimate the GRO concentration. For a diesel release, estimating the DRO concentration is complex, and site-specific evaluations could be completed.

Soil TPH GRO estimate = Soil BTEX*40

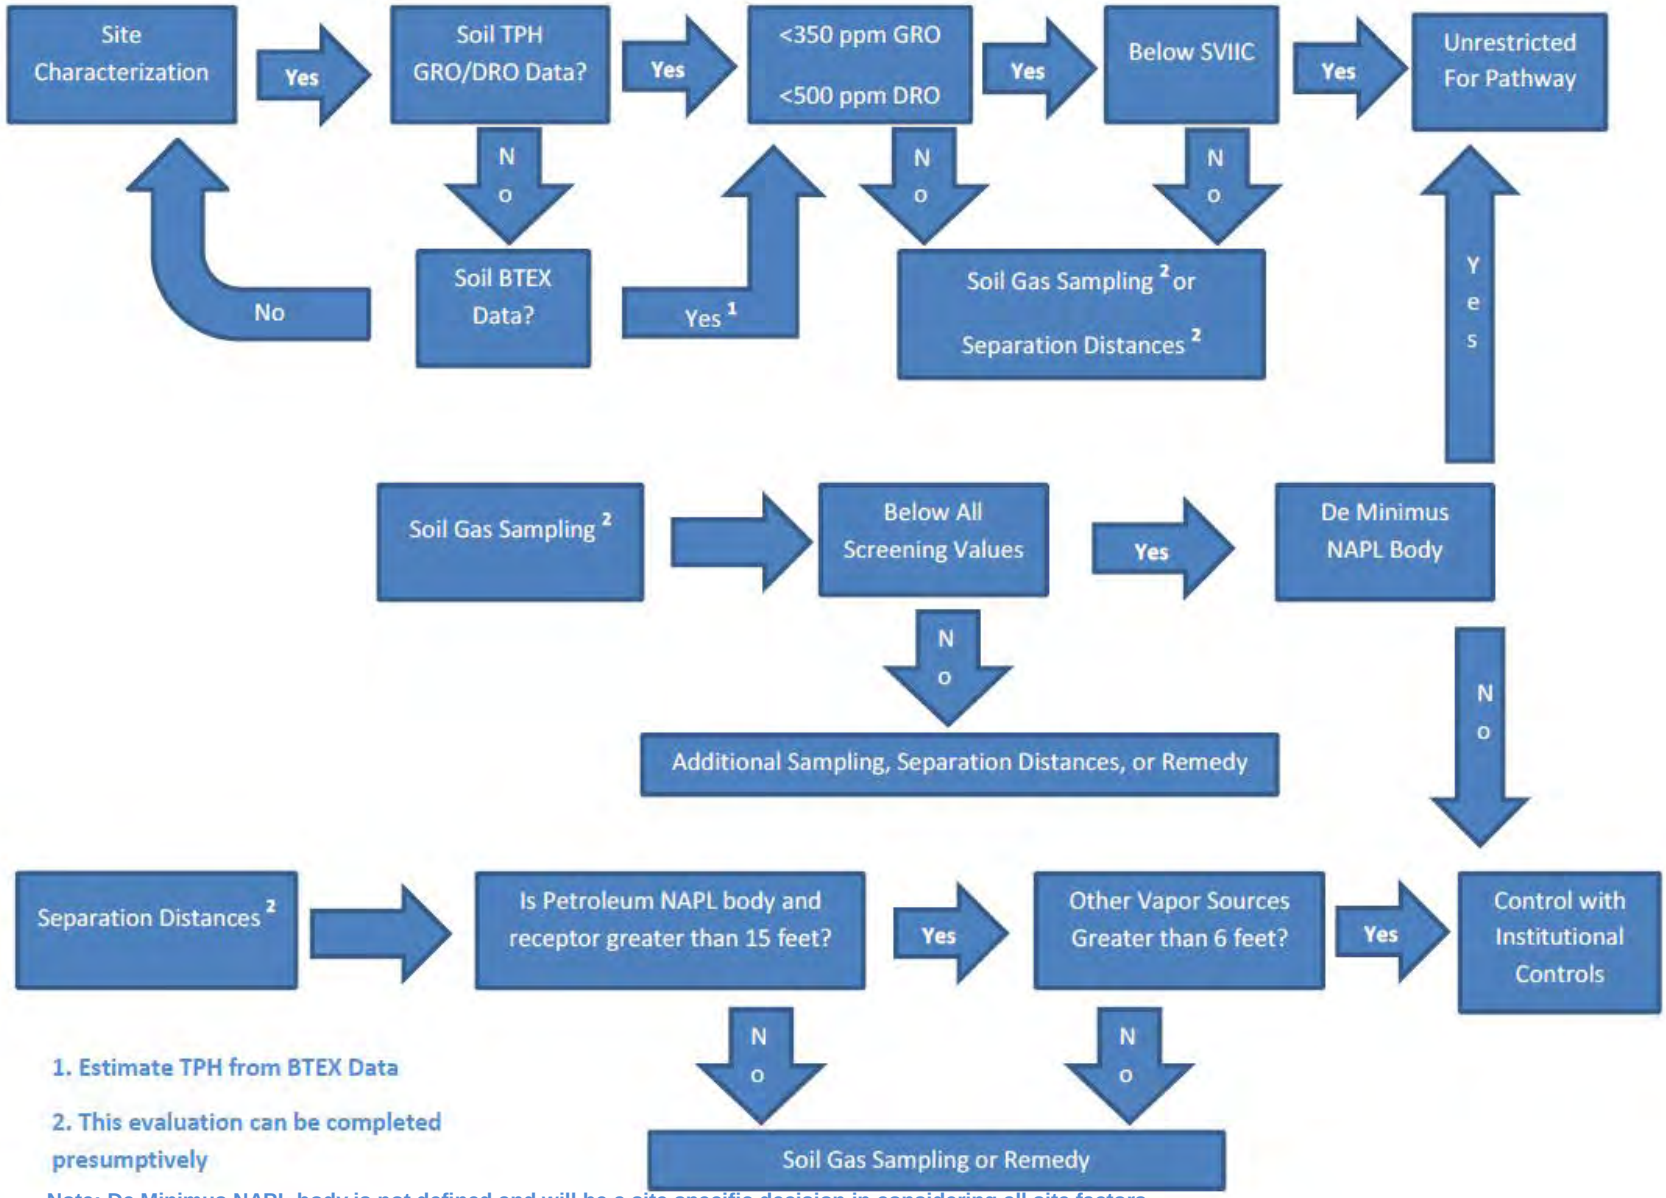
The following is intended to provide additional information and assistance on assessing VI risk and implementing corrective actions when addressing NAPL releases. One of the key assumptions is that the investigation results in an understanding of where the NAPL is located and where each state (residual, mobile, and migrating) of NAPL occurs. In addition, an adequate conceptual site model (CSM) will depict the location, nature, and extent of the NAPL body and compositional plumes in both plan and cross-sectional views, and properly identify potential receptors. The following options can be

utilized (alone or in combination) for evaluating and addressing the VI risk at NAPL sites using the CSM:

1. If the CSM demonstrates that there is no NAPL or only residual NAPL below the 350 ppm GRO or 500 ppm DRO, and the concentrations of the individual petroleum contaminants of concern (COC) in the soil are less than SVIIC then there will be no further risk assessment of the VI pathway required. Other assumptions in the SVIIC calculation will still need apply to the site. If GRO concentrations are unknown, the values can be estimated as outlined above. However, representative data provides the best information for assessing risks.

2. When NAPL is present, establish the chemical composition of the NAPL and utilize a scientifically defensible VI model that can estimate the rate of VI into buildings and identify the associated health risks. The model utilized will need to account for NAPL. Examples of appropriate NAPL models (in Excel® format), their assumptions and use restrictions, and their associated user's guides can be found at:

   http://www.epa.gov/oswer/riskassessment/airmodel/johnson_ettinger.htm
   OR
   http://www.api.org/environment-health-and-safety/clean-water/ground-water/vapor-intrusion/biovapor-form



3. When mobile and/or migrating NAPL is present; **or** the SVIIC (when applicable) is exceeded; **or** the GRO/DRO (350/500 ppm) concentration exceeds the screening value; **or** a structure is less than five meters (15 feet) from a NAPL body (that exceeds screening values); **or** a structure is less than two meters (6 feet) from other vapor sources (that exceeds sceening values), then soil gas or sub-slab samples may be collected and analyzed. The soil gas samples should be collected and analyzed in accordance with the sampling strategies identified in the MDEQ's *Guidance Document for the Vapor Intrusion Pathway* or in other scientifically defensible methods. Any detected values can be compared to the screening values published in that document to evaluate if the NAPL poses a risk.

4. If the CSM demonstrates that the NAPL body meets the separation distance of five meters (15 feet) and all other sources of vapor (e.g. impacted soil and dissolved groundwater) are at least two meters (6 feet) from any current, proposed, or planned structure, then the exposure risk is not present and no further risk assessment of the VI pathway is warranted.

NOTE: An institutional control would **NOT** be necessary if the evaluation was based on generic residential assumptions and comparison of soil analytical data to SVIIC (if applicable) or comparison of soil gas concentrations to screening levels to assess risk (if the soil gas samples were collected in or immediately adjacent to the NAPL body – "worst case"). Any time an evaluation other than one based on generic residential assumptions or "worst case" soil gas is implemented (e.g. dependence on separation distance), an institutional control or other remedial action will be necessary to prevent future exposures that could result from land use changes.

Further details on the investigation and risk assessment of soil vapors can be found in the MDEQ *Guidance Document for the Vapor Intrusion Pathway*.

Evaluation of the Vapor Intrusion Pathway with Residual Petroleum NAPL

1. Estimate TPH from BTEX Data

2. This evaluation can be completed presumptively

Note: De Minimus NAPL body is not defined and will be a site specific decision in considering all site factors

Appendix F.

Assessing Direct Contact Risk at Sites with Petroleum Non-Aqueous Phase Liquids

The presence of petroleum non-aqueous phase liquids (NAPL) complicates the evaluation of the soil direct contact (SDC) pathway. Soils containing NAPL can pose a direct contact risk to humans and risks to environmental receptors. The presence of petroleum-saturated soils was not accounted for in the development of the SDC risk-based screening levels (RBSLs)/cleanup criteria (CC) for individual hazardous substances, and may be inconsistent with the underlying assumptions of these criteria. Furthermore, while the Michigan Department of Environmental Quality (MDEQ) has established SDC RBSLs/CC for some of the individual hazardous substances that may be present in common petroleum mixtures, the variability of chemical compositions of petroleum mixtures and the site conditions under which they may exist prevents the development of generic petroleum-mixture RBSLs/CC for state-wide application. To minimize the uncertainties associated with applying the SDC RBSLs/CC when NAPL is present, the MDEQ considers the generic SDC RBSLs/CC appropriate for the evaluation of risk for the SDC exposure pathway when there is less than or equal to 0.5% of the pore space in the soil filled with residual NAPL and there is no evidence of mobile NAPL. At 0.5% saturation of NAPL, it can be reliably assumed that the NAPL is residual and there is not enough mass of NAPL in the soil to physically change the assumed soil properties in the algorithms.

If there is no evidence of mobile NAPL, initial comparisons of the soil concentrations may be made to the lower of the following: generic SDC RBSLs/CC or the individual single compound saturation limit (C_{sat} or soil in equilibrium with water at the solubility limit of an individual compound). When approximating the average compositions of petroleum, several of the individual C_{sat} concentrations may represent approximately 0.5% petroleum saturation in the soil pore space. If the lower of the generic SDC RBSLs/CC or C_{sat} is not exceeded, the MDEQ assumes that less than or equal to 0.5% of the pore spaces in the soil is filled with residual NAPL and no further activities would be required for this pathway.

If the lower of generic SDC RBSLs/CC or C_{sat} is exceeded, or there is evidence of mobile NAPL, a site-specific evaluation can be conducted to assess the SDC risk. The site-specific evaluation could include the determination of the degree of NAPL saturation and NAPL composition. The degree of NAPL saturation can be determined in the laboratory or estimated using total petroleum hydrocarbon (TPH) analysis and the following equation:

$$S_n = (\rho_b * TPH) / (\rho_n * n * 10^6)$$

Where:

S_n – degree of saturation (unitless)
ρ_b – dry bulk density of soil (g/cm^3) – assumed to be 1.6
TPH – TPH analytical value (mg/kg)
n – porosity – assumed to be 0.4 (unitless)
ρ_n – NAPL density (g/cm^3) – assumed to be 0.77 for gasoline and 0.85 for diesel fuel

Using the above assumptions, a TPH-gasoline range organics (GRO) concentration of 900 mg/kg and a TPH-diesel range organics (DRO) concentration of 1,050 mg/kg are approximately equal to 0.5% saturation of NAPL in the pore space of the soil. If the TPH concentration is less than or equal to these GRO and/or DRO concentrations or S_n is less than or equal to 0.5% NAPL saturation using site-

specific values, then the individual hazardous substance concentrations can be compared to the RBSLs/CC for the risk assessment of the SDC pathway.

If the NAPL saturation exceeds 0.5%, then it is assumed that there is a SDC risk associated with the soil, and corrective actions and/or exposure controls will be necessary. Site-specific risk evaluations may also be conducted to determine risks.

Example of an acceptable direct contact pathway risk evaluation:

1. The concentration of xylenes in a soil sample is 400,000 micrograms per kilogram (µg/kg). Comparison to generic SDC RBSLs/CC indicates via footnote that it is necessary to determine if NAPL is present to use this value for comparison. The initial screening comparison then becomes comparison to C_{sat}.
2. This concentration exceeds the individual C_{sat} screening level of 150,000 µg/kg. Further evaluation is required to determine if NAPL is present and if additional controls or protections from the NAPL are required.
3. The TPH-GRO concentration in this same soil sample is 750,000 µg/kg. Using the above assumptions and saturation equation, the GRO value suggests that NAPL saturation is less than 0.5%. This implies that residual NAPL is present at a low enough saturation the SDC RBSL/CC for xylenes of 410,000,000 µg/kg can be used for comparison.
4. Since the soil concentration of xylenes is less than the SDC RBSL/CC, there is no direct contact risk of total xylenes.

Appendix C
RACER LNAPL Remedial/Management Decision-Making Process

LNAPL CONCEPTUAL SITE MODEL (LCSM) DEVELOPMENT – MENU OF OPTIONS

	Potential Parameters/Considerations	Potential Evaluation Methods	Discussion
LNAPL Body Delineation/ Characterization	1. LNAPL body geometry: horizontal/ vertical extents, position relative to water table 2. Relative intensity of impacts (hot spots)	1. Installation of wells/borings, laser-induced flourescence (LIF), resistivity 2. Soil sampling (TPH, LNAPL saturations), groundwater sampling, LIF, resistivity	
Geology/ Hydrogeology	1. General Stratigraphy 2. Impacted Soil Types 3. Hydraulic Gradients 4. LNAPL Gradient 5. Hydraulic Conductivity	1,2. Field screening of soil borings, laboratory grain size analysis 3,4. Well gauging 5. Slug tests, pumping tests, laboratory testing	
LNAPL Physical/ Chemical Properties	1. LNAPL viscosity 2. LNAPL specific gravity 3. LNAPL type/age 4. LNAPL chemical composition	1,2. Laboratory physical property testing 3. Laboratory forensic testing/fingerprinting 4. Laboratory chemical analytical testing	
Dissolved and Vapor Phase Impacts	1. Groundwater concentrations of LNAPL constituents 2. Soil gas concentrations of LNAPL constituents 3. Soil gas explosivity	1. Groundwater sampling/laboratory testing 2. Soil gas sampling/laboratory testing 3. Field screening of well headspace and/or soil gas samples using handheld lower explosive limit (LEL) meter	1. Focus on wells without LNAPL. The potential benefit of sampling groundwater under LNAPL should be weighed against the risk of obtaining LNAPL-contaminated samples (LNAPL presence may not be readily apparent in a groundwater sample). 2. The need for soil gas sampling and the potential parameter list can be screened based on the volatility of the LNAPL and/or specific constituents (e.g., test for constituents with Henry's law constant > $1e^{-5}$ atm-m^3/mol and vapor pressure > 0.05 Torr)
LNAPL Mobility	1. Age of LNAPL body 2. Soil TPH concentrations 3. LNAPL saturations and residual saturations 4. LNAPL transmissivity 5. Recovery system performance 6. Dissolved phase trends *Typically involves a weight of evidence approach where multiple lines of evidence are considered (due to the complexity of multi-phase flow in the subsurface and the technical limitations of the potential evaluation methods).	2. Comparison against appropriate C_{res} value or conversion of TPH concentrations to saturations and comparison to typical residual saturation values (see ASTM E2531-06) 3. Soil core sampling and laboratory petrophysical testing (e.g., pore fluid saturation testing, water drive testing) 4. Field LNAPL baildown testing, pumping tests, field dye tracer testing (see ASTM E2856-11) 5. LNAPL recovery system cumulative recovery/ recovery rate plots, decline curve analysis 6. Groundwater concentration trends of LNAPL parameters	1. Older LNAPL is less likely to be mobile 2,3. LNAPL saturations exceeding residual levels provide a line of evidence of LNAPL mobility 4. LNAPL transmissivity > 0.8 ft^2/day provides a line of evidence of LNAPL mobility (see ASTM E2856-11) 5. Poor recovery system performance may provide strong evidence that remaining LNAPL is at residual levels/immobile (if the system has been effectively implemented and operated) 6. Dissolved phase trends provide an indication of the state of the LNAPL body (e.g., stable dissolved phase trends = stable LNAPL)
LNAPL Migration	1. LNAPL body expansion and migration *LNAPL migration differs from the LNAPL mobility consideration above in that is only considers the potential for LNAPL mobility around the perimeter of an LNAPL body (i.e., its ability to migrate or expand into areas that are not already impacted).	1. One or more LNAPL mobility lines of evidence indicates potential mobility along LNAPL body perimeter 2. LNAPL observations in sentry wells installed in clean soil 3. Estimate critical LNAPL head (pore entry displacement pressure) at LNAPL periphery	3. Critical LNAPL head (pore entry displacement pressure) exceeded at LNAPL periphery represents a potential for LNAPL body expansion/ migration
LNAPL Recoverability	1. Potential LNAPL recovery rates 2. Fraction of LNAPL body that may be recoverable *Most of the potential evaluation methods listed above for LNAPL mobility will also provide evidence relating to the potential recoverability of the LNAPL.	1. LNAPL recovery pilot results, LNAPL transmissivity estimation, full-scale LNAPL recovery system performance 2. Comparison of LNAPL saturations and residual saturations	1. LNAPL recovery may be considered technically practicable where LNAPL recovery rates exceed a minimum level and/or where LNAPL transmissivity > 0.8 ft^2/day 2. Regardless of the technical practicability of LNAPL recovery, any recovery activity will only have a significant effect on an LNAPL body where LNAPL saturations significantly exceed residual levels (i.e., significant recoverable fraction)
Potential Remedial Drivers	1. Risk (compositional concerns) 2. LNAPL mobility/migration (saturation concerns) 3. Non-risk (non-technical) factors such as aesthetic (e.g., visual, olfactory), regulatory or other considerations (e.g., property transaction condition)	1. Will vary from comparison of existing site data to generic criteria, to quantitative human health and ecological risk assessment (depending on complexity of site and magnitude of potential risks) 2. See LNAPL mobility and LNAPL migration lines of evidence and approaches above 3. Review applicable LNAPL regulations 3. Establish site goals	

NOTES:

Draft document originally created for the RACER Trust through the collaborative efforts of RACER, Conestoga-Rovers & Associates, and Arcadis.

The “menu” provided above presents potential elements of an LCSM, potential evaluation methods and potential metrics (where applicable). The need to quantify specific items above should be based on a preliminary consideration of site-specific goals and site complexity. *It will not be necessary to quantify all items above at all sites.*

Table C-1 of ITRC’s Technical Regulatory Document entitled Evaluating LNAPL Remedial Technologies for Achieving Project Goals provides more detail on LCSM components and presents a three level tiered approach to LCSM development based on increasing levels of site complexity

Table X4.1 of ASTM Standard E2531-6 provides detailed information on LNAPL site data collection methods and their applicability

LNAPL Compositional Concerns (potential exposure/risk issues):
- Explosive hazards (vapor accumulation in confined spaces/ utilities, open excavations)
- Dissolved-phase concentrations (migration toward surface water bodies or groundwater supply wells)
- Vapor-phase concentrations (vapor intrusion/long-term exposure risk)
- Direct contact or ingestion

EVALUATE LNAPL CONCERNS FROM LCSM

LNAPL Concerns = Remedial Drivers

Compositional Concerns
Risk-based drivers such as unacceptable levels of dissolved or vapor-phase impacts

Saturation Concerns
Drivers relating to the mitigation of LNAPL migration and/or reduction of LNAPL mobility

LNAPL Saturation Concerns (mobility and migration issues)
- Potential for LNAPL to spread and create new or increased risk (migration toward surface water, property boundary, underground utilities)
- Aesthetic/Nuisance issues

1

Risk: Are unacceptable dissolved phase, vapor phase or direct contact exposures associated with the LNAPL under any use scenarios?

Yes → Do feasible options exist to mitigate unacceptable risk through compositional change? (9)

No → No Further Action

Yes → Can institutional/engineering controls provide effective risk mitigation? (10)

No → Implement treatment/removal action (6)

Yes → **Cost-Benefit** Is there potential benefit to partial treatment/removal that outweighs costs? (5)

Yes → Implement treatment/removal action (6)

No → Are controls required? (7)

Migration: Is LNAPL migrating or potentially migrating (i.e., mobile along perimeter)? (2)

No → **Mobility**: Is LNAPL potentially mobile within stable LNAPL perimeter? (3)

No → Are controls required? (7)

Yes → Do feasible options exist to mitigate migration through LNAPL recovery or mass control?

No → Are controls required? (7)

Yes → Implement LNAPL Recovery Remedy (6)

Yes → **Cost-Benefit** Will potential benefit of LNAPL recovery outweigh costs? (5)

No → **Recoverability**: Is LNAPL readily recoverable? (4)

No → Are controls required? (7)

Yes → **Cost-Benefit** Will potential benefit of LNAPL recovery outweigh costs? (5)

No → Are controls required? (7)

Are controls required? (7)

Yes → Implement Controls → Implement Long-Term Stewardship/ Monitoring Plan (**as required**) (8) → No Further Action

No → Implement Long-Term Stewardship/ Monitoring Plan (**as required**) (8) → No Further Action

(#) NOTES

LNAPL Remedial Decision Tree

WORKING DRAFT – 2/6/13

1 The LCSM may identify both risk and mobility/migration issues at a given site. Consequently, compositional change techniques (to mitigate risk) and saturation reduction techniques (to mitigate mobility/migration concerns) may represent concurrent considerations that may require independent remedies.

2 Migration is only likely to be occurring where releases are active or shortly after cessation where a LNAPL gradient/head is present. Due to the complexity of multi-phase flow in porous media and the limitations of available assessment methods, LNAPL migration potential should be evaluated using multiple lines of evidence (see LCSM Menu – Page 1)

3 LNAPL Mobility – Is LNAPL present at saturations exceeding residual values? Example lines of evidence listed in LCSM Menu – Page 1.

4 The presence of readily recoverable LNAPL as defined by transmissivity > 0.8 ft^2/day does not necessarily indicate that a significant fraction of an LNAPL body would be beneficially affected through LNAPL recovery. An understanding of the fraction of the LNAPL body that may be recoverable is necessary in order to establish a realistic expectation of the actual benefit of any LNAPL recovery activity and a determination of whether the LNAPL body is “readily recoverable.”

5 The potential benefit of LNAPL remediation should be weighed against the potential costs in terms of the associated expenditure of financial and natural resources, the risks involved in implementation, and the contamination potentially resulting from the remedial action (i.e., sustainability considerations). For situations where LNAPL bodies are stable with no associated risk, the net environmental benefit of active engineered LNAPL remedial systems should be scrutinized. In these cases, it is highly unlikely that LNAPL recovery will effect enough of the LNAPL body to result in a significant level of risk reduction over natural source zone depletion (NSZD) alone.

6 Establish LNAPL recovery objectives and science-based achievable/measureable LNAPL recovery end-points prior to implementing LNAPL remediation (e.g., reduction of LNAPL transmissivity to less than 0.8 ft^2/day to meet a saturation objective).

7 Considering the significant technical limitations of LNAPL mass recovery or compositional change, engineering and/or institutional controls should be considered in conjunction with or in lieu of remedial action.

8 Perform any necessary monitoring to confirm LNAPL remedial goals are/were met.

9 LNAPL compositional change remediation is implemented to reduce the concentration or mole fraction of specific compounds in LNAPL that contribute to dissolved and or vapor phase concerns (i.e., air sparging and soil vapor extraction to reduce the mole fraction of benzene in LNAPL). Phase change technologies can be used to target immobile LNAPL, unlike conventional LNAPL mass recovery technologies such as LNAPL skimming. Examples of compositional change techniques may include air sparging, enhanced biodegradation, in situ thermal treatment, and in-situ chemical oxidation. Some phase change remedial technologies will accomplish both LNAPL mass recovery (saturation objective) and compositional change objectives simultaneously.

10 Examples of potentially effective removal actions include excavation with off-site disposal, excavation with ex-situ thermal treatment and in-situ thermal treatment (e.g., electrical resistance heating with high vacuum extraction).

LNAPL Remedial Decision Tree Notes

Attachment E
RACER LNAPL Decision Tree Analysis

LNAPL Compositional Concerns (potential exposure/risk issues):
- Explosive hazards (vapor accumulation in confined spaces/ utilities, open excavations)
- Dissolved-phase concentrations (migration toward surface water bodies or groundwater supply wells)
- Vapor-phase concentrations (vapor intrusion/Long-term exposure risk)
- Direct contact or ingestion

EVALUATE LNAPL CONCERNS FROM LCSM

LNAPL Concerns = Remedial Drivers

Compositional Concerns
Risk-based drivers such as unacceptable levels of dissolved or vapor-phase impacts

Saturation Concerns
Drivers relating to the mitigation of LNAPL migration and/or reduction of LNAPL mobility

LNAPL Saturation Concerns (mobility and migration issues)
- Potential for LNAPL to spread and create new or increased risk (migration toward surface water, property boundary, underground utilities)
- Aesthetic/Nuisance issues

Risk: Are unacceptable dissolved phase, vapor phase or direct contact exposures associated with the LNAPL under any use scenarios?

Yes → Do feasible options exist to mitigate unacceptable risk through compositional change?

No → Can institutional/engineering controls provide effective risk mitigation?

Yes → **Cost-Benefit** Is there potential benefit to partial treatment/removal that outweighs costs?

Yes → Implement treatment/removal action

No → Are controls required?

No → ④ No Further Action

Migration: Is LNAPL migrating or potentially migrating (i.e., mobile along perimeter)?

① No → **Mobility**: Is LNAPL potentially mobile within stable LNAPL perimeter?

② No → **Recoverability**: Is LNAPL readily recoverable?

No → **Cost-Benefit** Will potential benefit of LNAPL recovery outweigh costs?

Yes → Implement LNAPL Recovery Remedy

Yes → Do feasible options exist to mitigate migration through LNAPL recovery or mass control?

No → Are controls required?

Yes → ③ Implement Controls → Implement Long-Term Stewardship/ Monitoring Plan (**as required**) → No Further Action

① AGE, LNAPL WELL OBSERVATIONS INDICATE A STABLE LNAPL BODY.

② NO MEASURABLE LNAPL IN WELLS, SHEEN OBSERVED.

③ NO CURRENT RISK DUE TO LNAPL PRESENCE.

④ DEED RESTRICTION IN PLACE WILL MITIGATE RISK ASSOCIATED WITH DIRECT CONTACT, DRINKING WATER AND VAPOR INTRUSION PATHWAYS. GSI NOT A RELEVANT PATHWAY AS UNDERGROUND UTILITIES HAVE BEEN DESTROYED/PLUGGED.

Attachment F
Declaration of Restrictive Covenant

DECLARATION OF RESTRICTIVE COVENANT AND ACCESS EASEMENT (2)

This Declaration of Restrictive Covenant and Access Easement ("Restrictive Covenant") is made as of the 7th day of June, 2011 by RACER Properties LLC, a Delaware limited liability company, having an address at 401 South Old Woodward Avenue, Suite 370, Birmingham, MI 48009 ("RACER"), to notify parties that the "Property" described herein is a "facility" under applicable Michigan Law, and to restrict activities on and uses of, and grant certain rights of access, ingress and egress over the real property and improvements located at 299, 300 and 301 36th Street, SW, Wyoming, Kent County, Michigan, as more particularly described on Exhibit A attached hereto and incorporated herein by reference (the "Property").

1. DEFINITIONS:

1.1. "Bankruptcy Case" means the case commenced by that certain voluntary petition filed on June 1, 2009 in the Bankruptcy Court by MLC, RACER's predecessor-in-interest in the Property, and its affiliated debtors, as debtors and debtors in possession under Chapter 11 of Title 11 of the United States Code, that has been jointly administered with the Chapter 11 cases of its affiliated Debtors under Case No. 09-50026 (REG).

1.2. "Bankruptcy Court" means the United States Bankruptcy Court for the Southern District of New York.

1.3. "Claims" means any claim, action, award, cause of action, suit, inquiry, demand, judicial or administrative proceeding, determination, hearing, order, decree, judgment, settlement, grievance, mediation or arbitration.

1.4. "Confirmation Order" means that certain Findings of Fact, Conclusions of Law, and Order Pursuant to Sections 1129(a) and (b) of the Bankruptcy Code and Rule 3020 of the Federal Rules of Bankruptcy Procedure Confirming Debtors' Second Amended Joint Chapter 11 Plan, dated March 29, 2011, issued by the Bankruptcy Court and filed as Docket No. 9941 in the Case, a copy of which Confirmation Order (without exhibits) is attached hereto as Exhibit B and incorporated herein by reference, and pursuant to which the Bankruptcy Court has approved, among other things, the "Plan" described therein, and the Settlement Agreement.

1.5. "Environmental Action" means any response, removal, investigation, sampling, remediation, reclamation, closure, post-closure, corrective action, engineering controls, institutional controls, deed restrictions, oversight costs, operation, monitoring

and/or maintenance authorized or required by any Environmental Laws or Governmental Authority, or authorized in the Plan or Settlement Agreement, including without limitation, sampling and analyzing soils and groundwater, performing general inspections, other environmental sampling, tests, borings, surveys and engineering studies in each case with respect to the Property.

1.6. "Environmental Condition" means any Release or other event, circumstance or condition existing at, on, in or under the Property, or the ambient air around the Property, that violates any Environmental Law, or any other event, circumstance or condition which, with the giving of notice or passage of time would reasonably be expected to violate an Environmental Law if not remediated, abated and/or cured.

1.7. "Environmental Law" means any and all Laws as in effect relating to (a) pollution, (b) the protection and/or safety of the environment or natural resources, (c) the management of Hazardous Substances, or (d) the use, storage, recycling, treatment, generation, transportation, processing, handling, labeling, production, Release, or disposal of Hazardous Substances, including, without limitation: (i) the Clean Air Act; (ii) the Federal Resource Conservation and Recovery Act (42 U.S.C. 6901 *et seq.*), as amended by the Hazardous Waste and Solid Waste Amendments of 1984; (iii) the Comprehensive Environmental Response Conservation and Liability Act (42 U.S.C. 9601 *et seq*), as amended by the Superfund Amendments and Reauthorization Act of 1984; (iv) the Federal Water Pollution Control Act; (v) the Toxic Substances Control Act (15 U.S.C. 2601 *et seq*); (vi) the Federal Insecticide, Fungicide and Rodenticide Act, as amended; (vii) the Safe Drinking Water Act; (viii) OSHA; (ix) the Hazardous Liquid Pipeline Safety Act; (x) the Hazardous Materials Transportation Act; (xi) Solid Waste Disposal Act, as amended; (xii) the National Environmental Policy Act; and (xiii) NREPA, including Part 201, as any of the foregoing has been, and may be, amended, supplemented and/or replaced from time to time.

1.8. "Governmental Authority" means any Government, and any governmental official, agency, entity, court or tribunal of competent jurisdiction instrumentality, or authority having jurisdiction over the Property pursuant to Environmental Laws.

1.9. "Hazardous Substances" means all materials, substances and/or wastes defined, designated, regulated or classified as hazardous, toxic or radioactive under any applicable Environmental Law, whether by type or by quantity and shall include but not be limited to petroleum or any derivative or by-product thereof and asbestos-containing materials. The term "Hazardous Material" includes, without limitation, any material or substance which is (a) defined as a "hazardous waste," "extremely hazardous waste," "restricted hazardous waste," "hazardous substance," "hazardous material," or "toxic substance" by any Environmental Law, (b) asbestos or asbestos containing materials, molds, urea formaldehyde or radon that affect health, indoor air quality and/or structural integrity of the Improvements, (c) polychlorinated biphenyls (PCBs) or PCB-containing materials or fluids, (d) any petroleum, gasoline, oil, petroleum hydrocarbons, petroleum products (or by-products), crude oil and any constituents, additives, fractions or derivatives thereof, and (e) any other substance that is subject to regulation under any Environmental Law or with respect to which any Environmental Law or Governmental Authority requires Environmental Action.

1.10. "Governments" means, the United States of America (on behalf of the Environmental Protection Agency), the States of Delaware, Illinois, Indiana, Kansas, Michigan, Missouri, New Jersey, New York, Ohio, Virginia and Wisconsin, the Louisiana Department of Environmental Protection, and the Department of Environmental Protection of the Commonwealth of Pennsylvania and the Saint Regis Mohawk Tribe.

1.11. "Land Use Controls" means, collectively, any deed restrictions, covenants, conditions, reservations, easements, rights of way, engineering or institutional controls and/or other Liens affecting the future use of, or access to, the Property in connection with any Environmental Condition or Environmental Action, or otherwise required under the Settlement Agreement, as may be required by Governmental Authority acting pursuant to Environmental Law, or as RACER and Owner may otherwise agree.

1.12. "Laws" means all applicable laws, statutes, rules, regulations, ordinances, statutes, conditions, codes, judgments, orders, decrees, settlements, injunctions, technical or other standards, policies, determinations, writs, and other requirements of any Agency, or any other instrumentality having jurisdiction over the Property, together with any applicable common law, and any and all permits, licenses, approvals or authorizations issued thereunder.

1.13. "Liability" means any and all direct losses, damages, debt, deficiencies, obligations, liabilities, Claims, awards, interest, fines, penalties or costs of any nature or kind, including all fees, costs and expenses, whether joint or several, secured or unsecured, and due or to become due; and including without limitation, all reasonable fees, disbursements and expenses of attorneys, consultants and other experts arising therefrom or related thereto, but specifically excluding consequential damages or lost income, value or profits or punitive or treble damages or penalties of any type or manner.

1.14. "MDEQ" means the Michigan Department of Environmental Quality, its predecessor and successor agencies or entities, and those persons or entities acting on its behalf.

1.15. "MLC" mean Motors Liquidation Company, formerly known as General Motors Corporation,

1.16. "NREPA" means Michigan's Natural Resources and Environmental Protection Act, 1994 PA 451, as amended, and the rules promulgated pursuant thereto.

1.17. "Part 201" means Part 201 of the NREPA, MCL 324.20101 *et seq.* and the rules promulgated pursuant thereto.

1.18. "Permitted Uses" means, with respect to the Property, any heavy industrial, light industrial, high tech or other non-residential and non-retail shopping redevelopment uses, of the Property; provided, however, with respect to that portion of the Property lying north of 36th Street and being designated as Tax parcel numbers 41-17-13-455-049 and 41-17-13-455-050, it shall also include "commercial uses", as defined under applicable Environmental Laws, other than those related to child care or educational purposes.

1.19. "Purchase Agreement" means that certain Real Estate Purchase Contract dated December 23, 2010 between MLC and Thunder Ventures LLC for the sale

and conveyance of the Property to Thunder Ventures LLC, or another party designated by Thunder Ventures LLC, in accordance with, and subject to, the terms thereof, as modified, amended, supplemented and/or assigned.

1.20. "RACER" means RACER Properties LLC, and its successors and assigns.

1.21. "Release" means a release as defined in Part 201 or any part of NREPA or as otherwise defined under any Environmental Law, including, without limitation, releasing, spilling, leaking, emitting, discharging, injecting, escaping, leaching, disposing, transporting or dumping of Hazardous Substances.

1.22. "Representatives" means, with respect to each party, its agents, employees, contractors, representatives, servants, licensees, sublicensees, officers, directors and stakeholders, affiliates, successors and assigns, and such other persons over which said party exerts control.

1.23. "Settlement Agreement" means that certain Environmental Response Trust Consent Decree and Settlement Agreement among the Debtors, the Governments, and EPLET, LLC (not individually but solely in its representative capacity as Administrative Trustee of the Trust established thereby), to settle, compromise and resolve various disputes between the Debtors and the Governments relating to the "Properties" described therein, which includes the Property, and to otherwise address the matters set forth therein, as more particularly set forth therein, a copy of which is attached as Exhibit C and incorporated by reference.

1.24. "Subsequent Owner" means any individual or entity subsequent to RACER who, at any given time, is then current title holder of the Property, or who has any interest in the Property, including without limitation any ownership interest, any possessory rights, any easement, a leasehold interest, mortgage, or other interest in the Property.

1.25. "Trust" means the Revitalizing Auto Communities Environmental Response Trust, a trust formed under the Laws of the State of New York, and the direct parent of RACER.

1.26. "USEPA" means the United States Environmental Protection Agency its successor agencies or entities, and those persons or entities acting on its behalf.

All other capitalized terms used in this document which are not defined in this document, shall have the meaning ascribed thereto in the NREPA or the Settlement Agreement, as appropriate.

2. BACKGROUND:

2.1. The Property was conveyed to RACER by MLC effective as of March 31, 2011.

2.2. The Confirmation Order, the Settlement Agreement, the Purchase Agreement, and related documents may impose upon RACER obligations for Environmental Actions at, on, about and related to the Property and the MDEQ or the USEPA may also require RACER to undertake Environmental Actions to comply therewith and/or with applicable Environmental Laws.

2.3. Hazardous Substances have been found in soils and groundwater in or on the Property at levels that exceed the unrestricted residential criteria under Part 201 and the Property is listed on the MDEQ's Part 201 Site List under the site name "General Motors - CPC Metals" and MDNRE Part 201 site identification number 41000115.

2.4. This Restrictive Covenant is made as of the date hereof, and intended to be contemporaneously recorded with the Kent County Register of Deeds, to protect the public health, safety, and welfare, and the environment, by prohibiting or restricting activities that could result in unacceptable exposure to Environmental Conditions in, at, on or under the Property. This Restrictive Covenant is not currently required by any Governmental Authority. Environmental site assessments and other Environmental Actions have been undertaken and will continue to occur to address Environmental Conditions in, at, on or under the Property. It is believed that the MDEQ will require restrictive covenants that are in addition to and/or different than this Restrictive Covenant or that, following completion of various Environmental Actions in, at, on or under the Property, the MDEQ may require and/or allow different restrictive covenants. Therefore, this Restrictive Covenant may be modified, amended, supplemented and/or restated in its entirety, and any Subsequent Owner is deemed to have consented to such modifications, amendments, supplements and/or restatements as may, from time to time, be: (a) required by any Governmental Authority, or (b) approved by any Governmental Authority upon request by RACER (or any Representative thereof) in accordance with the Confirmation Order, Settlement Agreement and/or Purchase Agreement, so long as RACER delivers prior written notice to Subsequent Owner of its intend request for such approval, and consults in good faith with Subsequent Owner in connection therewith, or (c) approved by any Governmental Authority upon a request by any Subsequent Owner and RACER (or the Trust) acting together. Notwithstanding anything to the contrary set forth in Section 2.4 or elsewhere herein, a Subsequent Owner who is the record title holder of the Property, at its sole cost and expense, may use any available legal means to contest or dispute any modifications, amendments, supplements and/or restatements required by any Governmental Authority, so long as Subsequent Owner delivers prior written notice to RACER reasonably in advance thereof, and RACER has the opportunity to contest or be heard on such contest, or dispute.

2.5. It is recommended that prospective purchasers or users of the Property undertake all appropriate inquiry under applicable Environmental Laws prior to acquiring or using this Property, and undertake appropriate actions to comply with the requirements of Section 20107a of the NREPA, MCL 324.20107a.

3. DECLARATION OF LAND USE OR RESOURCE USE RESTRICTIONS:

RACER declares and covenants that the Property shall be subject to the following Restrictions, requirements and conditions:

3.1. The Property may be used only for the Permitted Uses. No residential use may be made of the Property. Any site modifications required in, at, in, on or under the Property to accommodate the Permitted Uses (including without limitation, soil and/or Debris management and surface water and/or groundwater management and any other matters relating to the use, operations, development, excavation, grading, construction, or demolition at the Property), is the sole obligation and liability of the Subsequent Owner (at the time of such activities) and will be conducted at such Subsequent Owner's sole expense, cost and Liability.

3.2. The use of groundwater at, in, or under the Property by any person or entity for any purpose, including potable and non-potable uses, shall be strictly prohibited. No wells or other devices to extract groundwater for consumption, irrigation, or any other use, except for wells and devices that are intended for environmental assessment or monitoring or that are part of an Environmental Action, may be drilled, constructed or placed in, on or at the Property. Short-term dewatering for construction purposes is permitted provided the dewatering, including management and disposal of the groundwater, is allowed under and complies with all applicable Environmental Laws and does not cause or result in a new Release, exacerbation of any existing Environmental Condition, or any other violation of Environmental Laws including, but not limited to, Part 201.

3.3. Each Subsequent Owner shall prohibit activities on the Property that may (a) disturb, disrupt, delay or otherwise interfere with any Environmental Actions, including the integrity, operation and/or maintenance thereof, or (b) exacerbate or disturb any Environmental Condition. Notwithstanding the foregoing, or anything to the contrary set forth herein, RACER and each Subsequent Owner shall consult with one another, using all commercially reasonable efforts to coordinate their respective activities to avoid having such respective activities materially or unreasonably interfere with, disrupt or delay the activities of the other party; provided however, RACER has limited funds with which to undertake and complete its Environmental Actions and shall not be required to expand its obligations (including increasing the cost) for Environmental Actions in connection therewith, or with any change in use of the Property not necessary for the Permitted Use. Accordingly, nothing in this duty to consult and coordinate activities shall obligate RACER to incur additional costs in performing the Environmental Actions.

3.4. No Subsequent Owner shall remove, cover, obscure, or otherwise alter or interfere with the permanent markers placed on the Property, if required by the MDEQ or any other Governmental Authority, or otherwise in connection with the performance of any other Environmental Actions. Each Subsequent Owner shall keep vegetation and other materials clear of the permanent markers to assure that the markers are readily visible.

3.5. Each Subsequent Owner shall manage all soils, media and/or debris located on the Property in accordance with the applicable requirements of Section 20120c of the NREPA; Part 111, Hazardous Waste Management, of the NREPA; Subtitle C of the Resource Conservation and Recovery Act, 42 USC § 6901 *et seq.*; the administrative rules promulgated thereunder; and all other relevant Environmental Laws.

3.6. Vapor intrusion barriers may be a Land Use Control used to prevent exposure to Hazardous Substances (in the form of vapors) rather than the complete removal of their source. Therefore, to the extent required by any Governmental Authority, or as reasonably needed to prevent exposure to Hazardous Substances (in the form of vapors), any redevelopment of the Property shall require the construction and installation of vapor intrusion barriers for any building or other enclosed structure that will be occupied by any persons for any purposes. Any persons excavating soils or working in trenches or underground shall be notified of possible Hazardous Substances (in the form of vapors) and advised to take appropriate precautions.

3.7. Any and all discarded materials located on and/or under the surface of the Property, including, but not limited to, building materials from demolition activities; domestic and industrial trash; tires; automotive parts; used containers which held materials

such as paint, antifreeze, gasoline, and other household substances; materials painted with lead-base paints or otherwise; wood, and other materials which may have been painted with lead-based paints; roof shingles and other building materials which may contain asbestos-containing materials (collectively, "Debris") and/or soil management and surface water and/or groundwater management required or necessary because of excavation, demolition, or soil disturbance related to the use, operations, development, excavation, grading, construction, or demolition, at, in, on, or below the Property is the sole obligation and Liability of the Subsequent Owner, except to the extent relating to Environmental Actions performed by or on behalf of RACER. Such soil and/or Debris management and surface water and/or groundwater management may include in-place management, excavation, sediment and erosion control, and disposal or other soil and Debris management options which are allowed or required under applicable Environmental Laws.

3.8. No Subsequent Owner shall Release any Hazardous Substances, on, at, under, or below the Property, except as incidental to industrial processes that do not have as a principal purpose the treatment, storage or disposal of Hazardous Substances, so long as and on condition that: (a) such Hazardous Substances are Released in accordance with Environmental Laws, (b) the Property maintains generator-only status, and (c) such Release does not exacerbate or disturb any Environmental Condition or increase the cost of any Environmental Action. A Subsequent Owner may: (a) accumulate such Hazardous Substances as allowed under applicable Environmental Laws for off-site treatment, off-site storage, or off-site disposal, and (b) use commercial products on-site which may contain such substances, in each case, subject to the foregoing conditions.

3.9. Any and all management of utility lines or piping, including, without limitation, any sanitary or storm sewers, any gas, water, electrical, or any other gas, water or electrical utility lines or piping, and any such materials that may be included therein, and any and all management of any septic systems, and any such materials that may be included therein, which may be present at or below the Property which management may be required or necessary to properly maintain the Property or because of excavation, demolition, or soil disturbance related to future use, development, or construction at or of the Property, is the sole obligation and Liability of the Subsequent Owner.

4. EASEMENT:

4.1. RACER retains for itself and grants, conveys and transfers to the MDEQ and any appropriate Governmental Authorities, a non-exclusive easement (the "Easement") over the Property as reasonably necessary or appropriate to (a) conduct and complete any and all Environmental Actions, together with any reasonably needed ingress and egress to the Easement area, and access over the remainder of the Property to places on the Property where such Environmental Actions are occurring, (b) verify that such Environmental Actions conform with all remedial action plans for such Environmental Actions, including the right to inspect the operation of the Environmental Actions, and inspect any records relating thereto, and to perform any actions necessary to maintain compliance with, Part 201 of NREPA, and (c) access, ingress and egress to and over such portions of the Property as are required to ensure the compliance of the Subsequent Owner with this Agreement and the Land Use Controls, unless and until the Environmental Actions have been completed, as determined pursuant to Section 4.4.

4.2. The rights and powers reserved to RACER in this Restrictive Covenant do not, and shall not be interpreted to, obligate RACER to exercise any of such rights and powers for any reason.

4.3. RACER shall be responsible for ensuring that all equipment and other personal property utilized by and on behalf of RACER at, on, or in the Property shall be stored safely and in a manner reasonably determined not to create a dangerous condition on the Property. Furthermore, to the extent reasonably feasible, any permanent or long term wells or other monitoring devices installed by or on behalf of RACER, and any Environmental Actions, shall be designed and undertaken in a manner so as not to unreasonably interfere with the redevelopment and reuse of the Property for the Permitted Use, subject to and in accordance with this Restrictive Covenant and the Settlement Agreement.

4.4. The Easement shall remain in full force and effect unless and until such time as the following occurs (a "Terminating Event") (a) the MDEQ and any other Governmental Authority determines that the Environmental Actions have been completed and/or its access or RACER's access to the Property is no longer needed in order to perform, complete and/or monitor the Environmental Actions, or otherwise connection therewith and no more monitoring of the soils or groundwater on the Property is needed, and (b) and the earlier to occur of (x) the MDEQ issues (or has otherwise waived in writing the requirement for) a No Further Action Letter or an equivalent written expression of environmental regulatory closure with respect to the Easement Property, and/or (y) the MDEQ otherwise waives in writing as against RACER, or releases in writing RACER and RACER's Representatives from, any and all further obligations for Required Remedial Actions in, on or at the Property. Any Subsequent Owner shall have the right to seek such a determination from MDEQ and all such Governmental Authorities, at any time.

4.5. All Subsequent Owners shall cooperate with RACER, its Representatives and all applicable Governmental Authorities, in all commercially reasonably respects, and as required by any Environmental Law or any Governmental Authority, in connection with the performance and completion of the Environmental Actions, and shall not unreasonably or materially interfere with, disrupt, impair, inhibit, restrict or otherwise impact such Environmental Actions.

4.6. RACER shall be solely responsible and Liable for any and all Environmental Actions it undertakes at the Property, including any violations of Environmental Law, in each case to the extent arising from or related to such Environmental Actions, except to the extent caused or exacerbated by any Subsequent Owner, or any Representative of a Subsequent Owner, or their negligent act or omission.

4.7. This Easement may be assigned by RACER to a designee, successor or assignee who has any responsibility for completing an Environmental Action.

5. MISCELLANEOUS:

Notice. All Subsequent Owners shall provide notice to the MDEQ of the Subsequent Owner's intent to transfer any interest in the Property at least 14 business days prior to consummating the conveyance. A conveyance of title, easement, or other interest in the Property shall not be consummated by the Owner without adequate and complete provision for compliance with the applicable provisions of Section 20116 of the NREPA. The notice

required to be made to the MDEQ under this Paragraph shall be made to: Chief, Remediation Division, Michigan DEQ, P.O. Box 30426, Lansing, MI 48909-7926; and shall include a statement that the notice is being made pursuant to the requirements of this Restrictive Covenant, DNRE Site Reference Number 41000115. A copy of this Restrictive Covenant shall be provided to all future owners, heirs, successors, lessees, easement holders, assigns, and transferees by the person transferring the interest.

5.1. Running with the Land. This Restrictive Covenant, and the Easement granted herein, shall run with the Property and shall be binding on all Subsequent Owners, their Representatives and assigns. This Restrictive Covenant may only be modified or rescinded with the written approval of RACER (or the Trust, if RACER no longer exists) and the MDEQ, except as otherwise expressly provided herein; provided, however, once a Terminating Event has occurred, the approval of RACER (or the Trust) shall no longer be required as aforesaid.

5.2. Enforcement. The State of Michigan, through the MDEQ, RACER and any Subsequent Owner may enforce the restrictions set forth in this Restrictive Covenant by legal action in a court of competent jurisdiction.

5.3. Severability. If any provision of this Restrictive Covenant is held to be invalid by any court of competent jurisdiction, the invalidity of such provision shall not affect the validity of any other provisions hereof, and all such other provisions shall continue unimpaired and in full force and effect.

5.4. Modification. This Restrictive Covenant is made for the benefit of the general public and Subsequent Owners and operators of the Property, and is not intended for the benefit of RACER or its successors or assigns, except to the extent necessary or appropriate in order for the performance and completion of its Environmental Actions as provided in this Restrictive Covenant. Accordingly, any Subsequent Owner who is the record title holder of the Property may petition the MDEQ for modification of any provision of this Restrictive Covenant, and such modifications may be made without any approval or consent of RACER or its successors or assigns, if and to the extent approved by the MDEQ except to the extent otherwise provided in the Settlement Agreement or by applicable Governmental Authority; so long as such Subsequent Owner has provided RACER with prior reasonable notice of its intent to do so, and with a copy of the petition. The Easement shall be terminated only as provided in paragraph 2 of Section D of this Restrictive Covenant, or as may be provided by an amendment, modification, supplement and/or restate thereof that is approved, signed and recorded by RACER (or its successor or assigns), the MDEQ and the Subsequent Owner who holds record title to the Property.

LEGAL DESCRIPTION OF PROPERTY

Tax ID Number(s): 41-17-13-455-050 (Parcel 1), 41-17-13-455-049, 41-17-24-201-007 (Parcel 3) and 41-17-24-178-007 (Parcel 4)

Land Situated in the City of Wyoming in the County of Kent in the State of Michigan.

Parcel 1:

Lots 833, 844, 883, and 894 except the Northerly 9 feet thereof, also except the East 7 feet of Lot 833, Home Acres No. 2, City of Wyoming, Kent County, Michigan, as recorded in Liber 30 of Plats, Page 13;

Also, Lots 834 and 835, EXCEPT the East 7 feet thereof and all of Lots 842, 843, 884, 885, 892, 893, and 922, Home Acres No. 2, City of Wyoming, Kent County, Michigan, as recorded in Liber 30 of Plats, Page 13;

Also, Lots 841, 886, 887, 888, 889, 890, 891 and 923 Homes Acres No. 2, EXCEPT that part lying South of a line described as: Commencing at the South 1/4 corner of Section 13, T6N, R12W, City of Wyoming, Kent County, Michigan; thence S 88° 04'34" East 100.65 feet along the South line of said Section to a point of intersection with the West line of said Lot 923 extended Southerly to said Section line; thence N 0° 38'26" West 50.05 feet to a point 50.00 feet North (perpendicular measurement) from the South line of said Section 13, and the True Place of Beginning of said line; thence S 88° 04'34" East 852.18 feet parallel with the South line of said Section to the East line of said Lot 886 and the place of ending of said Line.

Also, that part of Hillcroft Avenue in Home Acres No. 2, described as follows: Commencing at the Southeast corner of Lot 923 of said plat; thence East 60 feet to the Southwest corner of Lot 891 of said plat; thence North 249 feet to a point on the West line of Lot 894 of said plat; thence West 60 feet to a point on the East line of Lot 922 of said plat at a point 249 feet North of the place of beginning; thence South 249 feet to the place of beginning. EXCEPT that part lying South of a line described as being 50.00 feet North (perpendicular measurement) from the South line of said Section 13.

And Also, that part of Birchwood Avenue in Home Acres No.2, described as follows: Commencing at the Southeast corner of Lot 886 of said plat; thence East 60 feet to the Southwest corner of Lot 841 of said plat; thence North to a point which is 122 feet North of the SW corner of Lot 842 to a point on the West line of Lot 844 of said plat; thence West 60 feet to the East line of Lot 883 of said plat at a point 122 feet North of the SE corner of Lot 885 of said plat; thence South along the West line of said Birchwood Avenue to the place of beginning. EXCEPT that part lying South of a line described as being 50.00 feet North (perpendicular measurement) from the South line of said Section 13.

Said Parcel 1 may also be described as:

All of Lots 842, 843, 884, 885, 892, 893, 922 and part of Lots 833, 834, 835, 841, 844, 883, 886, 887, 888, 889, 890, 891, 894 and 923 and vacated portions of Hillcroft Avenue and Birchwood Avenue, Home Acres No. 2, Section 13, T6N, R12W, City of

Wyoming, Kent County, Michigan, described as: Commencing at the South 1/4 corner of said Section; thence South 88°22'14" East along the South line of said Section 100.15 feet; thence North 00°49'32" West 50.05 feet along the Southerly extension of the West line of said Lot 923 and the West line of said Lot 923 to the North line of 36th Street and the Place of Beginning; thence North 00°49'32" West 234.58 feet along the West lines of said Lots 923 and 922 to the Northwest corner of said Lot 922; thence South 88°20'11" East 511.85 feet along the North line of said Lot 922 to the Northeast corner of said Lot 922; thence South 01°02'06" East 2.60 feet along the East line of said Lot 922; thence South 88°20'11" East 60.07 feet to the West line of said Lot 894; thence North 01°02'06" West 12.60 feet along the West line of said Lot 894 to the South line of the North 9.00 feet of said Lot 894; thence South 88°23'44" East 279.76 feet along the South line of the North 9.00 feet of said Lots 894 and 883 to the East line of said Lot 883; thence South 01°03'06" East 16.00 feet along the East line of said Lot 883; thence South 88°20'11" East 60.07 feet to the East line of vacated Birchwood Avenue; thence North 01°03'06" West 16.06 feet along the West line of said Lot 844 to the South line of the North 9.00 feet of said Lot 844; thence South 88°23'44" East 272.92 feet along the South lines of the North 9.00 feet of said Lots 844 and 833 to the West line of the East 7.00 feet of said Lot 833; thence South 01°03'06" East 138.00 feet along the West lines of the East 7.00 feet of said Lots 833, 834 and 835 to the South line of said Lot 835; thence North 88°23'44" West 226.26 feet along the South lines of said Lots 835 and 842 to the Northeast corner of said Lot 841; thence South 01°03'06" East 106.43 feet along the East line of said Lot 841 to the North line of 36th Street; thence North 88°22'14" West along the North line of 36th Street 959.31 feet to the Place of Beginning.

Parcel 3:

That part of McQueen-Doyle Park No. 1, Wyoming Township, Kent County, Michigan, (now situated in the City of Wyoming), as recorded in Liber 30 of Plats, Page 10, described as: Commencing at a point on the North line of said plat 82.64 feet S87° 49'30" East from the Northwest corner of said plat; thence S 87° 49'30" East 150.0 feet along the North line of said plat, to the East line of Lot 152 of said plat extended North; thence S 0° 02'30" East 165.15 feet along the East line of said Lot 152 to the Southeast corner of said Lot; thence N87° 49'30" West 50 feet along the South line of Lot 152 to the Southwest corner of said Lot; thence S 0° 02'30" East 30.0 feet along the East line of Lot 146 of said plat; thence S 26° 27'40" West 111.96 feet to the Southwest corner of said Lot 146; thence S 0° 02'30" East 16.51 feet to the center line of Floyd Street (33 feet wide); thence N 87° 49'30" West 132.0 feet to the West line of McQueen-Doyle Park No. 1; thence N 0° 09'30" West 148.63 feet along the West line of said Plat; thence S 87° 49'30" East 82.29 feet along the North line of Lot 148 of said Plat and its Westerly extension to the Northeast corner of said Lot 148; thence N 0° 02'30" West 165.15 feet along the West line of Lot 150 and its Northerly extension to the place of beginning.

Also, Lot 149 of McQueen-Doyle Park No. 1 and that part of Lots 145, 153, 154 and 155 of McQueen-Doyle Park No. 1 which lies Westerly of a line which is 33 feet West of the centerline of relocated Stafford Avenue as constructed and that part of Lot 146 McQueen-Doyle Park No. 1 lying Westerly of a line which is 33 feet West of the centerline of relocated Stafford Avenue as constructed and which lies Easterly of a line described as follows: Commencing at the Southwest corner of said Lot 146; thence Northeasterly to the East line of said Lot at a point 30 feet South of the Northeast corner of said Lot.

Also, that part of vacated 40th Street lying West of relocated 40th Street and Stafford Avenue.

Also, the West 1/2 of the Northeast 1/4 of Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, EXCEPT the Conrail Railroad right of way, also excepting a strip of land 40 feet in the width lying West of and adjoining to the centerline of Buchanan Avenue for highway purposes.

Also, Except that part of the West 1/2 of the Northeast 1/4 of Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, described as: Commencing at the point of intersection of the South line of said West 1/2 of the Northeast 1/4 with the West line of Buchanan Avenue (being 40 feet distant Westerly from the centerline of Buchanan Avenue) said point being 75.28 feet N87° 49'30" West from the Southeast corner of said West 1/2 of the Northeast 1/4; thence N 87° 49'30" West 828.27 feet along the South line of said West 1/2, of the Northeast 1/4; thence N 47° 10'30" East 46.67 feet to a point 33 feet distant North from the South line of the West 1/2 of the Northeast 1/4 ; thence S 87° 49'30" East 695.3 feet; thence Northeasterly 125.8 feet along a 101.8 foot radius curve to the left (the chord of which bears 117.95 feet N 56° 46'24" East) to said West line of Buchanan Avenue; thence South 101.4 feet along the West line of Buchanan Avenue to the Place of beginning.

Also, Except that part of the West 1/2 Northeast 1/4 of Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, described as: Commencing at the Northeast corner of the West 1/2 Northeast 1/4 of said Section; thence South 33.03 feet along the East line of said West 1/2 Northeast 1/4; thence N 87° 22' West 40.04 feet parallel with the North line of said Section to the Place of Beginning of this description; thence N 87° 22' West 10.0 feet along the South line of 36th Street; thence S 43° 41' East 14.46 feet to a point on the West line of Buchanan Avenue which is 10.0 feet South from the Place of Beginning; thence North 10.0 feet to the Place of Beginning.

And further Excepting, all that part of the West 1/2 of the Northeast 1/4 of Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, described as: Commencing at the North 1/4 corner of said Section 24; thence S 88° 04'34" East 36.85 feet along the North line of said Section to a point of intersection with the East line of the CONRAIL (formerly Pennsylvania R.R. and Penn Central R.R.) right-of-way extended Northerly to said Section line; thence S 0° 32'11" West 33.03 feet along said Northerly extended railroad right-of-way line to a point which is 33.00 feet South (perpendicular measurement) from the North line of said Section for the Place of Beginning of this description; Thence S88° 04'34" East 1239.0 feet parallel with the North line of said Section to a point which is 50.40 feet N 88° 04'34" West (formerly described as N 87° 22' West) from the East line of the West 1/2 Northeast 1/4 of said Section 24; thence S 44° 23'58' East 14.47 feet (formerly described as S 43° 41' East 14.46 feet) to the Westerly right-of-way line of Buchanan Avenue (being 40.00 feet perpendicular measurement West from the center line of said Avenue) at a point which is 43.00 feet South perpendicular measurement from the North line of said Section 24; thence S 0° 43'22" East 37.02 feet along said Westerly right-of-way line of Buchanan Avenue, N 44° 23'58" West 43.39 feet to a point which is 50.00 feet South (perpendicular measurement) from the North line of said Section 24; thence N 88° 04'34" West 1219.05 feet parallel with the North line of said Section to the East line of CONRAIL railroad right-of-way; thence N 0° 32'11" East 17.02 along said railroad right-of-way line to the Place of Beginning.

Also together with that part of vacated Buchanan Avenue described as, that part of the West 1/2, Northeast 1/4, Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, described as: Commencing at the NE corner of said Section 24; thence N 88° 04'34" West 1323 feet along the North line of said Section 24 to center line of Buchanan Avenue (South) and also being the so called Northeast corner of said West 1/2, Northeast 1/4; thence S 0° 43'22" East 512.88 feet along said center line of Buchanan Avenue; thence Southerly 599.97 feet along said center line on a 22,727.58 foot radius curve to the left, the long chord of which bears S 0° 02'00" West 599.95 feet; thence S 0° 47'23" West 328.37 feet along said center line; thence N 89° 12'37" West 40 feet to the West right of way line of Buchanan Avenue to the Place of Beginning of this description; thence S 0° 47'23" West 272.03 feet along the West right of way line of said Avenue; thence Southerly 206.78 feet along said West right of way line on a 29,932.44 foot radius curve to the left, the long chord of which bears S 0° 35'31' West 206.78 feet; thence S89° 58'46"East 5.71 feet; thence N 0° 01'14" East 478.78 feet to the Place of Beginning.

Parcel 4:

That part of the East 1/2 of the East 1/2 of the Northwest 1/4 of Section 24, T6N, R12W, City of Wyoming, Kent County, Michigan, described as: Commencing at the North 1/4 corner of said section; thence South 88° 04' West 163.4 feet along the North line of said Section to the Westerly line of the Consumers Power Company right-of-way; thence South 4° 32'40" East 990.0 feet along said Westerly right-of-way line to the Point of Beginning; thence South 4° 32'40" East along said right-of-way line 1097.25 feet; thence South 88° 04'West 465.75 feet parallel with the North line of said section to the East line of Clay Avenue; thence North 4° 26' West 225.74 feet along the East line of Clay Avenue; thence Northeasterly 443.47 feet on a 533.66 foot radius curve to the right, the long chord of which bears North 19° 22'23" East 430.82 feet; thence North 43° 10'45" East 134.26 feet; thence Northeasterly 421.36 feet on a 595.22 foot radius curve to the left, the long chord of which bears North 22° 53'58" East 412.62 feet to the intersection of the East line of Clay Avenue and a line which is 990.0 feet South of the North line of said section; thence East 0.66 feet parallel to the North line of said section to the Point of Beginning.

Re: **Former GRMP (17360)** Work Order: **1507084**

Dear Rawa,

ALS Environmental received 12 samples on 01-Jul-2015 01:40 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 25.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Work Order: 1507084

Case Narrative

Batch 73021, Method ICP_6020_S, Sample 1507084-12A MSMSD: The MS and MSD recoveries were outside of the control limits for Chromium, Lead and Manganese; however, the results in the parent sample are greater than 4x the spike amount. No qualification is required.

Batch 73030, Method SVO_8270_S, Sample 1507084-12A MS/MSD: The MS and MSD recoveries and RPDS were outside of the control limits for multiple compounds. The corresponding results in the parent should be considered estimated.

Batch 73166, Method CR6_7196_S, Sample 1507084-12A MS/MSD: The MS and MSD recovery was below the lower control limit for Hexavalent Chromium. The corresponding result in the parent sample may be biased low.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071003**

Dear Rawa,

ALS Environmental received 1 sample on 17-Jul-2015 03:50 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 7.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
mg/L	Milligrams per Liter

Re: **Former GRMP (17360)** Work Order: **15071004**

Dear Rawa,

ALS Environmental received 8 samples on 17-Jul-2015 03:40 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 25.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071125**

Dear Rawa,

ALS Environmental received 1 sample on 21-Jul-2015 02:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 14.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

Case Narrative

Batch 73767, Method SVO_8270_S, Sample 15071125-01A: The SVOC reporting limits are elevated due to dilution needed to eliminate matrix-related interference.

Batch 73870, Method CR6_7196_S, Sample 15071125-01A MS/MSD: The MS and MSD recovery was below the lower control limit for Hexavalent Chromium. The corresponding result in the parent sample may be biased low.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071126**

Dear Rawa,

ALS Environmental received 1 sample on 21-Jul-2015 02:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 13.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

Chad Whelton
Project Manager

Certificate No: MN 532786

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071129**

Dear Rawa, Revision: **1**

ALS Environmental received 1 sample on 21-Jul-2015 02:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 8.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Re: **Former GRMP (17360)** Work Order: **15071177**

Dear Rawa,

ALS Environmental received 3 samples on 22-Jul-2015 12:50 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 11.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071381**

Dear Rawa,

ALS Environmental received 3 samples on 24-Jul-2015 for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 14.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071381**

Dear Rawa,

ALS Environmental received 3 samples on 24-Jul-2015 11:00 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 15.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071516**

Dear Rawa,

ALS Environmental received 3 samples on 27-Jul-2015 04:15 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 13.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15071580**

Dear Rawa,

ALS Environmental received 12 samples on 28-Jul-2015 03:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 20.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **1507531**

Dear Rawa,

ALS Environmental received 3 samples on 09-Jul-2015 03:55 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 16.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **1507561**

Dear Rawa,

ALS Environmental received 2 samples on 10-Jul-2015 10:20 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 9.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **1507749**

Dear Rawa,

ALS Environmental received 12 samples on 14-Jul-2015 03:20 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 26.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

Case Narrative

Batch 73551, Method SVO_8270_S, Sample 1507749-05A: The MS and MSD recovery were above the upper control limits for Benzo(a)anthracene, Benzo(b)fluoranthene, Fluoranthene, Phenanthrene, and Pyrene. The corresponding result in the parent sample may be biased high.

Batch 73546, Method ICP_6020_S, Sample 1507749-05A: The MS and MSD recoveries were outside of the control limits for Lead and Manganese; however, the result in the parent sample is greater than 4x the spike amount. No qualification is required.

Batch 73546, Method ICP_6020_S, Sample 1507749-05A: The MS and MSD recoveries for Chromium were outside control limits and the RPD exceeding criteria. The corresponding result in the parent sample should be considered estimated.

Batch 73631, Method CR6_7196_S, Sample 1507749-05A: The MS and MSD recoveries were below the lower control limit for Hexavalent Chromium. The corresponding result in the parent sample may be biased low.

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight
mg/Kg-dry	Milligrams per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **1508139**

Dear Rawa,

ALS Environmental received 3 samples on 04-Aug-2015 05:00 PM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 13.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Acronym	Description
DUP	Method Duplicate
LCS	Laboratory Control Sample
LCSD	Laboratory Control Sample Duplicate
LOD	Limit of Detection (see MDL)
LOQ	Limit of Quantitation (see PQL)
MBLK	Method Blank
MDL	Method Detection Limit
MS	Matrix Spike
MSD	Matrix Spike Duplicate
PQL	Practical Quantitation Limit
RPD	Relative Percent Difference
TDL	Target Detection Limit
TNTC	Too Numerous To Count
A	APHA Standard Methods
D	ASTM
E	EPA
SW	SW-846 Update III

Units Reported	Description
% of sample	Percent of Sample
µg/Kg-dry	Micrograms per Kilogram Dry Weight

Re: **Former GRMP (17360)** Work Order: **15061470**

Dear Rawa,

ALS Environmental received 4 samples on 25-Jun-2015 08:25 AM for the analyses presented in the following report.

The analytical data provided relates directly to the samples received by ALS Environmental and for only the analyses requested.

Sample results are compliant with NELAP standard requirements and QC results achieved laboratory specifications. Any exceptions are noted in the Case Narrative, or noted with qualifiers in the report or QC batch information. Should this laboratory report need to be reproduced, it should be reproduced in full unless written approval has been obtained from ALS Environmental. Samples will be disposed in 30 days unless storage arrangements are made.

The total number of pages in this report is 10.

If you have any questions regarding this report, please feel free to contact me.

Sincerely,

Chad Whelton

Electronically approved by: Chad Whelton

QUALIFIERS, ACRONYMS, UNITS

Qualifier	Description
*	Value exceeds Regulatory Limit
a	Not accredited
B	Analyte detected in the associated Method Blank above the Reporting Limit
E	Value above quantitation range
H	Analyzed outside of Holding Time
J	Analyte is present at an estimated concentration between the MDL and Report Limit
n	Not offered for accreditation
ND	Not Detected at the Reporting Limit
O	Sample amount is > 4 times amount spiked
P	Dual Column results percent difference > 40%
R	RPD above laboratory control limit
S	Spike Recovery outside laboratory control limits
U	Analyzed but not detected above the MDL
X	Analyte was detected in the Method Blank between the MDL and PQL, sample results may exhibit background or reagent contamination at the observed level.

Appendix E
PFC and 1,4-Dioxane Groundwater Sampling Results Memorandum

Memorandum

February 12, 2018

To:	Darlene Pearson, MDEQ	Ref. No.:	017360-T08Y17
From:	Jeni Quigley/md/92 JQ	Tel:	269.685.2725
cc:	Dave Favero, RACER Trust		
Subject:	**PFC and 1,4-dioxane Groundwater Sampling Results Former Grand Rapids Metal Plant Wyoming, Michigan**		

1. Introduction

GHD, on behalf of Revitalizing Auto Communities Environmental Response (RACER) Trust, conducted groundwater sampling activities at the former Grand Rapids Metal Plant Property located at 300 36th Street SW in Wyoming, Michigan (Site). The purpose of the groundwater sampling was to evaluate for the potential presence of 1,4-dioxane and Perfluorinated Chemicals (PFCs), including Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS), in groundwater based on historical operations conducted at the Site. The samples were collected during the field event conducted on December 12, 2017. Sampling was completed in accordance with the methodology described in the PFC and 1,4-dioxane Sampling Scope of Work (SOW) memorandum submitted on November 17, 2017 to the Michigan Department of Environmental Quality (MDEQ) and approved on November 28, 2017 via email. This memorandum (Memorandum) has been prepared to present the results of the PFC and 1,4-dioxane groundwater sampling activities.

2. Sampling Procedures

The SOW for the PFC and 1,4-dioxane sampling activities conducted at the Site included: the collection and analysis of groundwater samples for PFCs from monitoring wells MW32-12, MW35-12, MW41-12, and MW60-14, and the collection and analysis of groundwater samples for 1,4-dioxane from monitoring wells MW32-12, MW35-12, MW41-12, MW44-12, MW49-13, and MW60-14. The sample locations were selected so one upgradient location was included and with the consideration of their location relative to Areas of Interest (AOIs) and respective historic operations that were the most likely locations on-Site where 1,4-dioxane and PFCs would be present. The monitoring well locations that were utilized for groundwater sampling are presented on Figure 1.

A total of nine groundwater samples, including quality assurance/quality control (QA/QC) samples, were collected from six monitoring wells.

Groundwater samples were collected using standard low flow procedures. New ¼-inch diameter HDPE tubing was utilized in each of the wells sampled. The bottom intake of the tubing was set in the middle of the screened interval for each of the wells. All wells were purged with a peristaltic pump using low flow purge

(LFP) techniques. Wells were purged between 100 and 150 milliliters (mL) per minute with continuous monitoring to confirm less than 0.3 feet of drawdown of the water level. Groundwater quality measurements were recorded in consecutive timed intervals using an YSI® water quality meter and HACH® turbidity meter. Groundwater quality parameters includes pH, specific conductivity, temperature, dissolved oxygen (DO), oxidation reduction potential (ORP), and turbidity. Upon stabilization of field measured water quality parameters, based on three consecutive similar readings, groundwater samples were collected. Details of the sample procedures are presented in Attachment A (OBG Procedures). The sampling procedures were intended to prevent cross contamination of samples by PFCs. Field staff worked to ensure that samples were collected consistent with these procedures; however, due to hazardous winter weather conditions (i.e., potential cold stress) field staff were required to wear jackets that were not prescribed for use in standard PFC sampling procedures. Rinse blank and field blank samples were collected to evaluate if any cross contamination occurred, which is discussed further in Section 3.

3. Analytical Results

Samples were analyzed for 1,4-dioxane by TestAmerica Laboratories, Inc. (TA) in North Canton, Ohio using the analytical method SW-846-8260 SIM. TA in North Canton, Ohio subcontracted the PFC analysis to TA in West Sacramento, California. Samples were analyzed for PFCs by TA in West Sacramento, California using the analytical method Modified Method 537.

Analytical results for groundwater samples were evaluated against the Generic Residential and Non Residential Cleanup Criteria and Screening Levels established in Part 7 of Administrative Rules, effective December 30, 2013, pursuant to Part 201, Environmental Remediation, 1994 PA 451, as amended. The 1, 4-dioxane Rule package, Cleanup Criteria Requirements for Response Activity, specific to the residential drinking water criterion was promulgated on October 20, 2017. The MDEQ developed residential and nonresidential drinking water criteria for PFOA and PFOS that took effect on January 10, 2018. Analytical results for groundwater compared to the aforementioned criteria are presented in Table 1.

A QA/QC data validation was conducted on the analytical laboratory data. Copies of analytical laboratory data and data validation memorandum summarizing the results of the data validation are presented in Attachment B and Attachment C, respectively. Estimated concentrations are identified in the tables of the memorandum that include qualifications due to contamination in the method blank. Based on the review of the data validation memorandum, the data produced were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted in the tables in the data validation memoranda. Data was qualified for the groundwater samples collected at the listed monitoring wells for the following analytes due to the detection of the analyte in the method blank: 1,4-dioxane for the groundwater samples collected from MW49-13 and MW35-12; perfluorobutane sulfonate for the groundwater samples collected from MW32-12, MW35-12, MW60-14, and MW41-12; perfluorodecanoic acid for the groundwater sample collected from MW32-12; perfluoroheptane sulfonate for the groundwater sample collected at MW32-12; perflluoro-n-Octanoic acid for the groundwater sample collected at MW60-14; perfluorooctane sulfonamide for the groundwater samples collected at MW32-12, MW35-12, and MW60-14; perfluoroononanoic acid for the groundwater samples collected at MW35-12, MW60-14, and MW41-12; and perfluorohexane sulfonate for the groundwater samples collected at MW32-12, MW35-12, MW60-14, MW41-12. Additional details

regarding the qualified data are presented in the data validation memorandum included in Attachment C. The data qualifications do not affect the conclusions presented in this report.

A rinse blank sample and field blank sample were collected to assess field decontamination procedures, ambient conditions at the site, and cleanliness of sample containers to determine if cross contamination of PFCs occurred during sampling. Rinse blank and field blank analysis yielded low-level detections of target PFCs, however, the sample detections were qualified non-detect based on method blank results.

4. Conclusions

PFCs and 1,4-dioxane were detected at the Site below the Generic Residential and Non Residential Cleanup Criteria and Screening Levels. Based on the lack of criteria exceedances and Declaration of Restrictive Covenant that prohibits the installation of drinking water, irrigation, or other extraction wells, additional sampling is not necessary to further evaluate the presence of 1,4-dioxane and PFCs in groundwater at the Site.

1 INTRODUCTION

This procedure is for the collection of groundwater samples for laboratory analysis.

The objective of most groundwater quality monitoring programs is to obtain samples that are representative of existing groundwater conditions, or samples that retain the physical and chemical properties of the groundwater within an aquifer.

One of the most important aspects of groundwater sampling is acquiring samples that are free of suspended silt, sediment, or other fine grained particulates. Fine grain materials may often have a variety of chemical components sorbed to the particle or have the ability to sorb chemicals from the aqueous phase to the particle, which will bias the subsequent analytical results.

Constituents known to have an affinity for fine-grained particulates are: polychlorinated biphenyls (PCBs), semi-volatile organic compounds (SVOCs), and inorganics. Monitoring programs where these constituents are suspected or known to be prevalent must employ sampling methods that minimize particulate presence.

The "Low Stress/Low Flow" purging and sampling method will be utilized to purge the well to allow representative water from the formation to replace the standing water within the sampling zone of the well. Experience has shown that the low stress/low flow technique typically achieves representative groundwater samples with minimal particulate interference.

Lastly, in extreme cases "ultra-low flow" techniques have been employed at select sites where low stress/low flow methods were used, yet particulate-sensitive constituents continue to bias the analytical results, or excessive drawdown is produced using standard low stress/low flow methods due to the presence of low permeability materials within a well's screened zone. Ultra-low flow techniques are conducted at purging rates below 100 ml per minute, and should only be utilized after low stress/low flow methods have been attempted.

2 PROCEDURAL GUIDELINES

The following describes techniques for groundwater sampling: Low Stress/Low Flow Methods.

Low stress/low flow methods will be employed when it is critical to collect groundwater samples truly representative of the groundwater present, and to minimize the impact of sediment/colloid presence.

2.1 PREPARATORY REQUIREMENTS

Prior to groundwater sampling, an inspection will be performed on each well. The inspection will include:

- Inspecting the concrete pad for cracks
- Inspecting the protective steel cover
- Inspecting the integrity of the PVC well casing (to the extent possible)
- Inspecting the well caps
- Inspecting the well identification markings to confirm they are legible (if illegible, re-mark)
- Inspecting the locks to assess whether they are in good working condition.

Results of the well inspection will be documented on the Groundwater Sampling Log for each well. If the inspection indicates repairs are required, these will be performed prior to the next sampling event. Corrective actions implemented to repair well(s) will also be documented on the Groundwater Sampling Log and/or the field notebook for the facility.

Groundwater purging and sampling data will be recorded on the Groundwater Sampling Log.

2.2 WELL PURGING AND STABILIZATION MONITORING (LOW STRESS/LOW FLOW METHOD)

The procedure for sampling the monitoring wells is as follows:

1) Sampling equipment will first be decontaminated prior to each use by the following protocol:
   - Scrub equipment thoroughly in a low-sudsing detergent solution (*e.g.*, Alconox). Pump low-sudsing detergent solution through submersible pump for approximately 5 minutes, if utilized
   - Rinse equipment thoroughly with distilled water, and pump distilled water through submersible pump, if utilized
   - Wrap equipment in plastic for handling and/or storage until next use
   - Decontamination of disposable tubing, if used, will not be necessary
2) Calibrate field instrument and document calibration activity. Calibration shall be performed in accordance with manufacturer's recommendations, and noted on the Groundwater Sampling Log
3) An electric water level probe will be used to measure the depth from the top of the casing to the top of water to the nearest 0.01-ft. The measurement will be recorded in a dedicated field notebook and Groundwater Sampling Log
4) Measure the depth from the top of casing to the bottom of the well for the initial sampling event
5) Slowly lower the pump and/or tubing into the well positioning the pump intake at the mid-point of the well screen taking care to minimize disturbing the well
6) During the purging of the well, monitor and record the field indicator parameters (pH, temperature, conductivity, oxidation-reduction (redox) reaction potential (ORP), dissolved oxygen (DO), and turbidity) approximately every 5 minutes. Stabilization is considered achieved when the final groundwater flow rate is achieved, and three consecutive readings for each parameter are within the following limits:

pH	±0.1 pH units for three consecutive readings;
temperature	±3 percent for three consecutive readings;
conductivity	±3 percent for three consecutive readings;
ORP	±10 millivolts (mV) for three consecutive readings;
DO	±10 percent for three consecutive readings; and
Turbidity	±10 percent for three consecutive readings or a final value of less than 5 nephelometric turbidity units (NTU).

7) Verify that drawdowns of 0.3 ft or less are maintained and make adjustments as necessary. Record drawdown measurements and note adjustments in pumping rates as necessary on the Groundwater Sampling Log. If drawdowns of 0.3 ft or less cannot be maintained utilize ultra-low flow purge techniques. However, if ultra-low flow purging still results in the well purging "dry," allow the well to recharge and the sample will be collected as soon as sufficient water is present to obtain the necessary sample volume

8) Obtain a sample for chemical analyses immediately upon stabilization of field parameter measurements. Field filter the sample for dissolved metals using a 0.45-micron filter prior to preserving with acid. Samples are to be collected in the order of volatility as follows: TOC/TOX (or VOCs) and dissolved metals.

If after 2 hours of purging the indicator parameters have not stabilized, as recommended in the USEPA guidance, the purging will be discontinued and the sample will be collected with an explanation of attempts to achieve stabilization.

Either a decontaminated submersible pump or peristaltic pump (for shallow wells only) may be utilized to purge each well. If a submersible pump is utilized in the purging process, then it will be decontaminated prior to and after sampling each well. Sampling equipment must be protected from the ground surface by a clean plastic sheet laid around the work area. Water from purging will not be containerized.

2.3 SAMPLE PRESERVATION

Sample bottles will be labeled with sample identification, collection date and time, filtration/preservative status. Sample bottles will be filled and capped securely and immediately preserved (if required) and stored at 4 degrees Celsius in a cooler.

The cooler and samples will be prepared for shipment or transport by the following procedure:

1) Prepare cooler(s) for shipment.
   - Tape drain(s) of cooler shut
   - Place mailing label with laboratory address on top of cooler(s).
2) Arrange sample containers in a manner to prevent potential sample container breakage.
3) Confirm the bottle labels are completed correctly. Place clear tape over bottle labels to prevent moisture accumulation from causing the label to peel off.
4) Seal sample containers within plastic zip-lock bags to prevent packing material from contacting samples.
5) Place packing material at the bottom of the cooler to act as a cushion for the sample containers.
6) Fill remaining spaces with packing material.
7) Confirm containers are firmly packed in cooler.

8) If ice is required to preserve the samples, cubes should be repackaged in double zip-lock bags, and placed on top of the packing material.

9) Sign COC form (or obtain signature) and indicate the time and date it was relinquished to Federal Express or other carrier, as appropriate.

10) Separate copies of COC forms. Seal proper copies within a large zip-lock bag and tape to inside lid of cooler. Retain copies of forms in-house.

11) Close lid and latch.

12) Tape cooler shut on both ends, making several complete revolutions with strapping tape.

13) Relinquish to Federal Express or other courier service. Retain airbill receipt for project records (Note: Samples will be shipped for "NEXT DAY" delivery).

If samples are delivered directly to the laboratory, or the laboratories in-house courier, by the sampling team, the packaging/shipping requirements may be omitted. COC procedures; however, must be strictly maintained.

2.4 SAMPLE MANAGEMENT AND CHAIN-OF-CUSTODY

COC procedures document the history of sample containers and samples from the time of preparation of sample containers through sample collection, shipment, and analysis. A sample is considered in custody if:

- The sample is in the sampler's physical possession
- The sample is secured by the sampler to prevent tampering
- The sample is secured by the sampler employee in an area that is restricted to authorized personnel.

To maintain a record of sample collection, transfer between personnel, shipment, and receipt by the laboratory, a COC record will be completed for each sample at each sampling location. Each time the samples are transferred, signatures of the person relinquishing and receiving the samples, as well as the date and time, will be documented.

Parallel field notebook/Groundwater Sampling Log and COC records will be maintained. Recorded information will include:

- Sampling Location
- Time and Date
- Sampling Method
- Method of Preservation.

Additionally, the field notebook will also include information on weather conditions, depth to water, total depth of the well, field parameter and instrument calibration records and other useful or pertinent information. The notebook will be kept at the facility or with their designated contractor.

2.5 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) MEASURES

Field QA/QC procedures will consist of collecting one equipment blank (if reusable equipment is used) and one duplicate sample (one additional sample from one of the wells) for each sampling event. The duplicate sample will be assigned a separate sample identification and submitted to the laboratory "blind".

The procedure for collecting an equipment blank will be to pass distilled water through the decontaminated sampling device into a laboratory-supplied sample bottles. An equipment blank sample will not be required if disposable sampling equipment is used.

Comments
Insufficient sample for MS MSD for PFC analysis.

Receipt
The samples were received on 12/13/2017 10:25 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 1.1º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

LCMS
Method(s) 537 (modified): Isotope Dilution Analyte (IDA) recovery for M2-6:2FTS is above the method recommended limit for the following continuing calibration verification samples (CCV): (CCV 320-200881/1) and (CCV 320-200881/22). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

Method(s) 537 (modified): The method blank for preparation batch 320-200657 and analytical batch 320-200881 contained several analytes above the method detection limit. These target analyte concentrations were less than the reporting limit (RL). Sample GW-17360-121217-SK-005 (240-89302-5) had additional volume, it was reextracted. All others were reported as is.

Method(s) 537 (modified): Reanalysis of the following sample was performed outside of the analytical holding time due to failure of quality control parameters in the initial analysis: GW-17360-121217-SK-005 (240-89302-5). Both sets of data have been reported.

Method(s) 537 (modified): Isotope Dilution Analyte (IDA) recovery of M2-6:2FTS is above the method recommended limit for the following sample: GW-17360-121217-SK-005 (240-89302-5). Quantitation by isotope dilution generally precludes any adverse effect on data quality due to elevated IDA recoveries.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep
Method(s) 3535: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 320-201694.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

LCMS

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	N/A	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.8 C
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	False	Received project as a subcontract.
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Subject: **Analytical Results and Reduced Validation**
Groundwater Sampling Event
Former Grand Rapids Metal Plant
Wyoming, Michigan
December 2017

1. Introduction

This document details a reduced validation of analytical results for groundwater samples collected in support of groundwater sampling at the Former Grand Rapids Metal Plant Site during December 2017. Samples were submitted to TestAmerica Laboratories, Inc., located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard GHD report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes/laboratory control samples (LCS)/matrix spikes (MS) and field QA/QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the documents entitled:

i) "Former Grand Rapids Metal Plant Work Plan Quality Assurance Project Plan (QAPP)", Revision 1, January 6, 2011

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

Item ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2. Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in Table 3. The sample chain of custody document and analytical report were used to determine sample holding times. With one exception, the samples were prepared and analyzed within the required holding times. Sample GW-17360-121217-SK-005 was re-extracted outside the method holding time due to method blank contamination during the original

perfluorinated hydrocarbons (PFC) analysis. The results from reanalysis confirmed the original results and are not reported here.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (4 +/- 2°C).

3. Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Low concentrations of target parameters were detected in the method blanks, which indicate a potential for laboratory contamination. The associated samples that contained similar concentrations of these compounds are evidence of laboratory contamination and the results were qualified non-detect, as detailed in Table 4.

4. Isotope Dilution Analytes (IDA)

IDA data were evaluated for all PFC sample analyses.

IDAs are isotopically labeled analogs of the analytes of interest added to the investigative and QC samples at the time of extraction. All results are then calculated as a ratio of the IDA responses.

The IDA recovery results for each sample were evaluated against the following criteria:

i) IDA recoveries must be within 25-150%

All PFC IDA recoveries for the reported sample results met the above criteria

5. Surrogate Spike Recoveries – 1,4-Dioxane Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for 1,4-dioxane determinations were spiked with the appropriate number of surrogate compounds prior to sample extraction and/or analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the above criteria.

6. Laboratory Control Sample (LCS) Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits or outlying percent recoveries did not result in qualification, demonstrating acceptable analytical accuracy.

7. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the preparation process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision.

MS/MSD analyses were performed as specified in Table 1.

The MS/MSD samples were spiked with the compounds of interest. All percent recoveries and RPD values were within the laboratory control limits criteria, demonstrating acceptable analytical accuracy and precision.

8. Field QA/QC Samples

The field QA/QC consisted of one rinse blank sample, one field blank sample and one field duplicate set.

Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the site, and cleanliness of sample containers, one rinse blank was submitted for analysis, as identified in Table 1. The rinse blank yielded two low level detections of target PFCs. However, since the associated sample detections were qualified non-detect based on method blank results, no data qualification was required based on rinse blank results All remaining rinse blank results were non-detect for target parameters.

Field Blank Sample Analysis

To assess ambient conditions at the site and cleanliness of sample containers, a field blank was submitted for analysis, as identified in Table 1. The field blank yielded one low level target PFC detection. However, since the associated sample detections were qualified non-detect based on method blank results, no data qualification was required based on field blank results. All remaining field blank results were non-detect for target parameters.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, one field duplicate sample was collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with the duplicate sample must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criteria is one times the RL value for water samples.

The field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

9. Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the RL but greater than the MDL were reported as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the RL in Table 2.

10. Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.
