Affidavit of Person Submitting a No Further Action Report

Required pursuant to Section 20114d(5) of Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act (NEREPA), 1994 PA 451, as amended, to be submitted by a person submitting a No Further action (NFA) report to Michigan DEQ. All terms found in this document which are defined in Part 3, Definitions, and Part 201, Environmental Remediation, of NREPA shall have the same meaning as in the statute.

State of Michigan

County of Wayne

!. I, David Favero am authorized to submit this affidavit on behalf of Revitalizing Auto Communities Environmental Response (RACER) Trust under MCL 324.20114d(5).

2. A No Further Action (NFA) report dated February 9, 2018 is being submitted for a portion of the facility referred to as Former Grand Rapids Metal Plant Facility and the portion of the Facility is located at 300 and 301 36th Street SW, Wyoming, Michigan (the "portion of the Facility.")

3. The purpose of the NFA report is to detail the completion of remedial action at the portion of the Facility, and includes a postclosure plan (i.e., Declaration of Restrictive Covenant).

4. The remedial action at the portion of the Facility described in the NFA report was conducted in compliance with all applicable local, state, and federal laws and regulations.

5. I affirm to the best of my knowledge and belief that the NFA report prepared for the portion of this Facility, and all information, data, documents and reports relied upon for this NFA report, are true, accurate and complete.

Signature of Affiant

Sworn to before me and subscribed in my presence this 9th day of February, 2018.

EQP4031 (REV. 11/7/12)

Environmental Consultant Affidavit for No Further Action Report

Required pursuant to Section 20114d(5) of Part 201, Environmental Remediation, of the Natural Resources and Environmental Protection Act (NEREPA), 1994 PA 451, as amended, for the Environmental Consultant who prepared a No Further Action (NFA) report that is being submitted to Michigan DEQ. All terms found in this document which are defined in Part 3, Definitions, and Part 201, Environmental Remediation, of NREPA shall have the same meaning as in the statute.

State of Michigan

County of Kalamazoo

1. I, Jennifer Quigley, am an Environmental Consultant whose title is, Project Manager, and I am employed by GHD.

2. I meet the professional qualifications set forth in MCL 324.20114e(2) of NREPA. A description of my qualifications, including education and work experience, is attached.

3. I have prepared a No Further Action (NFA) report dated February 9, 2018 for the facility referred to as Former Grand Rapids Metal Plant Facility and located at 300 and 301 36th Street SW, Wyoming, Michigan (the "Facility.") The tax identification number and legal description of the property are described in Exhibit 1. I am submitting this affidavit pursuant to MCL 324.20114d(5).

4. I prepared the NFA Report at the request of David Favero, RACER Trust, 500 Woodward Avenue, Suite 2650, Detroit, Michigan.

5. The remedial action at the Facility described in the NFA report was conducted in compliance with Part 201 of the NREPA, and all other applicable local, state, and federal laws and regulations.

6. I affirm to the best of my knowledge and belief that the NFA report prepared for this Facility, and all information, data, documents and reports relied upon for this NFA report, are true, accurate and complete.

Notary Public

Jennifer Quigley
Associate/Project Manager

Qualified: B.S. Environmental Engineering, Michigan Technological University, 1997

Connected: Registered Professional Engineer: MI; Member West Michigan Chapter, Air and Waste Management Association

Professional Summary: Jeni has over 19 years of environmental assessment, compliance, and remediation experience, including senior technical support for complex and highly confidential environmental assessments. Jeni has specific expertise in management of multi-disciplinary teams of professionals on complex industrial/manufacturing facility environmental assessments and serves a variety of clients, including large automotive manufacturers, suppliers, PRP groups, attorneys, and educational institutions. Jeni is part of GHD's environmental site assessment senior peer review group.

Project Manager/Project Assessor
Environmental Due Diligence and Compliance Analysis | Various Clients | United States, Mexico, Turkey, Italy, and Australia

Project manager/assessor responsible for Phase I to IV Environmental Site Assessments and/or Compliance Analysis in support of acquisition/divestiture for various properties including the following: various residential properties, various vacant/undeveloped properties, various light manufacturing facilities, hospital, former psychiatric hospital, furniture distribution center, alcohol blending and bottling facility, warehouses, former and current automotive dealerships, railroad tracks, petroleum distribution center, induction heating system manufacturing facility, baked goods/confections and cultivated plant production and distribution facility, inactive fertilizer plant, silk screening facility, hybrid corn seed laboratory, metal scrap processing facilities, office/commercial facilities, cardboard manufacturing facility, metal forging facilities, school administrative building and bus maintenance garage, various current and former automotive manufacturing, assembly, and research and development complexes (greater than 1 million square feet in size), inactive pharmaceutical research and development complex (greater than 1 million square feet in size), flour mill, commercial bakeries and warehouses, and biodiesel facility.

Project Manager responsible for the development of various environmental plans including: Spill Prevention Control and Countermeasures, Pollution Incident Prevention, Stormwater Pollution Prevention, Slug, and Hazardous Waste Contingency Plan for a variety of facilities.

Project Manager
Former Grand Rapids Metal Plant | Automotive Trust | Wyoming, MI

Project manager responsible for the investigation activities conducted voluntarily under Michigan Act 451, Part 201 at a former automotive manufacturing facility. Main contaminants consist of chlorinated volatile organic compound, polynuclear aromatic hydrocarbon (PNA) and light non-aqueous phase liquid (LNAPL) impacted groundwater, and PNA, polychlorinated biphenyl (PCB), and metals impacts to soil. Primary activities include compliance and permitting activities, on and off-site delineation investigation activities, evaluation of prior remedial alternative (groundwater pump and treat and soil vapor extraction system) effectiveness and permitting requirements, development and submittal of appropriate Work Plans and Data Reports to the MDEQ, liaison with MDEQ, local officials, facility personnel, and subcontractors, evaluation of alternative remedial options, and implementation of the excavation of PCB, PNA, and metals-impacted soils.

Project Manager
Former Dowagiac Landfill | Local Unit of Government | Dowagiac, MI

Project manager responsible for evaluation and activities conducted under Michigan Act 451, Part 201 associated with a former landfill property. Main contaminants consist of volatile organic compounds and metals in groundwater, and landfill gas. Primary activities include historical documentation review, landfill gas and groundwater OM&M activities, development of work plans, and liaison with MDEQ, site personnel, and subcontractors.

Project Manager
Former Plainwell, Inc. Mill Property Superfund Site | Paper Manufacturer | Plainwell, MI

Project manager responsible for RI/FS activities conducted pursuant to a Consent Decree for an NPL site. Primary activities include implementation of the RI, development of the RI and FS reports, implementation of interim remedial excavation activities, development of RD reports, and liaison with EPA, MDEQ, project stakeholders, and subcontractors.

Project Manager
Bulk Petroleum Terminal | Petroleum Company | Ferrysburg, MI

Project manager responsible for investigation activities conducted under Michigan Act 451, Part 201 at a bulk petroleum terminal. Main contaminants consist of PNAs

and VOCs in soil and groundwater. Primary activities included historical document review and current conditions evaluation; on-site soil and groundwater investigation activities, groundwater monitoring activities, and report development and submittal.

Project Manager
Alpine Avenue Property | Automotive Manufacturer | Walker, MI

Project manager responsible for the investigation of a 12-acre former CERCLA 103(c) landfill. Primary activities include investigation and review of alternatives for development of an Interim Remedial Action Plan in support of redevelopment subsequent to brownfield property transfer.

Project Coordinator
Rockwell International Superfund Site| Automotive Manufacturer | Allegan, MI

Project coordinator responsible for the on-site oversight and implementation of a Removal Action Work Plan in a residential area under a CERCLA 106 Unilateral Administrative Order. Main contaminants included PCBs and lead in soil. The Work Plan included the excavation of approximately 6,000 tons of non-Toxic Substances Control Act (TSCA) and 6,000 tons of TSCA-impacted soil.

Project Manager
Bofors Nobel Superfund Site | Chemical Manufacturer | Muskegon, MI

Project manager responsible for the implementation of the Operations and Maintenance Plan (OMP) and Hygienic Groundwater Sampling Plan portions of the Interim Response Activity Plan (IRAP) for the Operating Plant Area of the Bofors Nobel Superfund site. Primary activities include: annual inspection of asphalt cover in vicinity of impacted soils; annual collection of groundwater samples from hygienic wells; and submittal of results to the MDEQ.

Project Coordinator
Former Landfill Property | PRP Group | Otsego, MI

Project coordinator responsible for investigation activities conducted under Michigan Act 451, Part 201 at a former landfill property in Otsego, Michigan. Main contaminants consist of chlorinated volatile organic compounds in groundwater. Primary activities included on-site soil, groundwater and soil gas investigation activities, groundwater monitoring activities, and report development and submittal.

Project Coordinator
Building Decommissioning | Automotive Manufacturers | Michigan and Indiana

Project coordinator/engineer responsible for providing engineering support for Building Decommissioning Assessments for industrial manufacturing facilities in Kalamazoo, Lansing, and Pontiac, Michigan and Anderson, Indiana. Primary activities included: field inventory of process equipment and fixtures; development of specifications; collection of representative samples of materials; and engineering support in the preparation of various proposals, cost estimates, and reports.

Project Manager
Automotive Dealerships | Automotive Manufacturer | Florida and Texas

Project manager responsible for limited mold inspection and remediation at automobile dealerships. Primary activities consisted of the management of local certified staff in implementation of the limited mold inspection and remediation efforts, which included: visual site inspections; limited ambient air microbial survey; removal and restoration of impacted areas; and development and submittal of applicable reports.

Coverage Extension Endorsement

Policy No.	Eff. Date of Pol.	Exp. Date of Pol.	Eff. Date of End.	Producer No.	Add'l. Prem	Return Prem.
BAP 3757423-02	7/1/2017	7/1/2018	7/1/2017		---	---

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

This endorsement modifies insurance provided under the:

Business Auto Coverage Form
Motor Carrier Coverage Form

A. Amended Who Is An Insured

1. The following is added to the **Who Is An Insured** Provision in **Section II – Covered Autos Liability Coverage**:

The following are also "insureds":

a. Any "employee" of yours is an "insured" while using a covered "auto" you don't own, hire or borrow for acts performed within the scope of employment by you. Any "employee" of yours is also an "insured" while operating an "auto" hired or rented under a contract or agreement in an "employee's" name, with your permission, while performing duties related to the conduct of your business.

b. Anyone volunteering services to you is an "insured" while using a covered "auto" you don't own, hire or borrow to transport your clients or other persons in activities necessary to your business.

c. Anyone else who furnishes an "auto" referenced in Paragraphs **A.1.a.** and **A.1.b.** in this endorsement.

d. Where and to the extent permitted by law, any person(s) or organization(s) where required by written contract or written agreement with you executed prior to any "accident", including those person(s) or organization(s) directing your work pursuant to such written contract or written agreement with you, provided the "accident" arises out of operations governed by such contract or agreement and only up to the limits required in the written contract or written agreement, or the Limits of Insurance shown in the Declarations, whichever is less.

2. The following is added to the **Other Insurance** Condition in the Business Auto Coverage Form and the **Other Insurance – Primary and Excess Insurance Provisions Condition** in the Motor Carrier Coverage Form**:**

Coverage for any person(s) or organization(s), where required by written contract or written agreement with you executed prior to any "accident", will apply on a primary and non-contributory basis and any insurance maintained by the additional "insured" will apply on an excess basis. However, in no event will this coverage extend beyond the terms and conditions of the Coverage Form.

.

All other terms, conditions, provisions and exclusions of this policy remain the same.

Includes copyrighted material of Insurance Services Office, Inc., with its permission.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS – SCHEDULED PERSON OR ORGANIZATION

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

SCHEDULE

Name of Person or Organization: **Where required by written contract**

(If no entry appears above, information required to complete this endorsement will be shown in the Declarations as applicable to this endorsement.)

A. Section II – Who Is An Insured is amended to include as an insured the person or organization shown in the Schedule, but only with respect to liability arising out of your ongoing operations performed for that insured.

B. With respect to the insurance afforded to these additional insureds, the following exclusion is added:

2. Exclusions

This insurance does not apply to "bodily injury" or "property damage" occurring after:

(1) All work, including materials, parts or equipment furnished in connection with such work, on the project (other than service, maintenance or repairs) to be performed by or on behalf of the additional insured(s) at the site of the covered operations has been completed; or

(2) That portion of "your work" out of which the injury or damage arises has been put to its intended use by any person or organization other than another contractor or subcontractor engaged in performing operations for a principal as a part of the same project.

 © ISO Properties, Inc., 2000

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS – COMPLETED OPERATIONS

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

SCHEDULE

Name of Person or Organization: **Where required by written contract**
Location And Description of Completed Operations: **Where required by written contract**
Additional Premium: **N/A**

(If no entry appears above, information required to complete this endorsement will be shown in the Declarations as applicable to this endorsement.)

Section II – Who Is An Insured is amended to include as an insured the person or organization shown in the Schedule, but only with respect to liability arising out of "your work" at the location designated and described in the schedule of this endorsement performed for that insured and included in the "products-completed operations hazard".

 © ISO Properties, Inc., 2000

ENDORSEMENT NO. 4

This endorsement, effective 12:01 AM, December 1, 2017

Forms a part of Policy No: CPO 14247915

Issued to: GHD HOLDINGS U.S. LLC

By: AIG SPECIALTY INSURANCE COMPANY

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED(S) ENDORSEMENT

It is hereby agreed that Section **VI. DEFINITIONS,** Paragraph **K. Insured** is amended by adding the following scheduled entity(s) as additional **Insured(s)** but solely as respects liability arising out of the **Covered Operations** performed by or on behalf of the **Named Insured.**

Additional **Insured**(s)

As required by written contract executed prior to a Claim or Loss.

All other terms, conditions, and exclusions shall remain the same.

Soil aesthetic impacts	☒	☐	☐
Groundwater contamination above residential criteria	☒	☐	☐
Groundwater contamination above non-residential criteria	☒	☐	☐
Groundwater aesthetic impacts	☐	☒	☐
Soil Gas contamination above residential vapor intrusion (VI) screening levels	☐	☐	☒
Soil Gas contamination above non-residential VI screening levels	☐	☐	☒
Conditions immediately dangerous to life or health (IDLH)	☐	☐	☐
Fire & Explosion hazards related to releases	☐	☐	☐
Contamination existing in drinking water supply	☐	☐	☐
Imminent threat to drinking water supply	☐	☐	☐
Impact to surface water	☐	☐	☐
Impact to surface water sediments above screening levels	☐	☐	☐
	☐	☐	☐

Section F: The following questions assist MDEQ in evaluating the No Further Action Report:

Have other plans or reports, BEAs, DDCCs, NFAs, etc. been submitted for this facility? None for these parcels

Facility Name, if different than this submittal:

Date and Name of most recent submittal:

Response Activities or Remedial Action that have been Implemented (Check all that apply):

	Current	Previously
Excavation	☐	☒
Physical or Engineered Exposure Barrier	☐	☐
Active Soil Remediation System	☐	☒
In-situ Soil Remediation	☐	☐
Active Groundwater Remediation System	☐	☒
In-situ Groundwater Remediation	☐	☐
Groundwater Monitored Natural Attenuation	☐	☐
Containment, Physical or Hydraulic	☐	☐
Vapor Intrusion Barrier	☐	☐
Vapor Intrusion Remediation System	☐	☐
Other, Specify:		

Remedial Action Relies on (Check all that apply):

Mixing Zone	☐
Part 201 Section 20118(4) and (5)	☐
MIOSHA demonstration (Section 20120a(18))	☐
Restrictive Covenant	☒

Institutional Control (Section 20121(8))	☐
Alternative Instruments (Section 20121(9)	☐

Post Closure Plan and Components:

Post Closure Plan Required? Yes ☒ No (Residential, Unrestriced Category Only) ☐

Plan Includes:

- Permanent Markers ☐
- Restrictive Covenant ☒
- Other Institutional Controls ☐

Post Closure Agreement and Components:

Post Closure Agreement Required? Yes ☐ No ☒

Agreement Includes:

- FAM ☐
- FAM, de minimus ☐
- Waiver of Permanent Marker ☐

Section G: Attachments (Required):

	Yes
Environmental Professional's Affidavit is attached:	☒
Environmental Professional's Certificate of Insurance is attached:	☒
Submitter's Affidavit is attached:	☒

Section H: Environmental Professional Signature:

With my signature below, I certify that this report and all related materials are true, accurate, and complete to the best of my knowledge and belief.

Signature: Jeni Quigley Date: February 9, 2018

Printed Name: Jennifer Quigley

Company: GHD

Mailing Address: 200 Allegan Street, Suite 300 City: Plainwell State: MI Zip: 49080

Telephone:269.685.2725 E-mail: jeni.quigley@ghd.com

Section I: Submitter Signature:

With my signature below, I certify that this report and all related materials are true, accurate, and complete to the best of my knowledge and belief and I am legally authorized to sign for the submitter.

Signature: _____ Date: Feb 9, 2018

(Person legally authorized to bind the legal entity)

Printed Name: David Favero

Title and Relationship of signatory to submitter: Deputy Cleanup Manager - Michigan

Address: 500 Woodward Avenue, Suite 2650 City: Detroit State: MI Zip: 48226

Telephone: 734.879.9525 E-Mail: dfavero@racertrust.org

This form and the No Further Action Report should be submitted to the DEQ Remediation and Redevelopment Division District Office unless the response activity is related to a facility that is regulated by another DEQ Division. A district map is located at www.michigan.gov/deqrrd. If regulated by another division, contact should be made with that division for information on where to submit the form and report.

No Further Action Report

Former Grand Rapids Metal Plant Facility
300 & 301 36th Street SW
Wyoming, Michigan

Prepared for: Revitalizing Auto Communities Environmental Response (RACER) Trust

GHD | 200 Allegan Street Suite 300 Plainwell Michigan 49080 USA

Table of Contents

1. Introduction 1

1.1 Scope and Purpose of the NFA Request 1

1.2 Report Organization 1

2. Site Description and Background 2

2.1 Property Location and Setting 2

2.2 Current and Historical Ownership and Operations 2

2.3 Regional Environmental Setting 4

2.3.1 Topography 4
2.3.2 Land Use 4
2.3.3 Water Supply/Groundwater Use 4
2.3.4 Regional Geology 4
2.3.5 Regional Hydrogeology 5
2.3.6 Regional Surface Water Hydrology 5
2.3.7 Regional Ecological Setting 6
2.3.8 Regional Plant Life 6
2.3.9 Regional Animal Life 6

2.4 Site Setting 6

2.4.1 Site Land Use 6
2.4.2 Surrounding Land Use 7
2.4.3 Adjacent Properties 7
2.4.4 Site Topography 7
2.4.5 Site Geology 7
2.4.6 Site Hydrogeology 8
2.4.7 Site Surface Water Hydrology 8
2.4.8 Site Groundwater Use 9
2.4.9 Ecology 9

3. Site Characterization and Criteria Evaluation 10

3.1 Summary of Previous Environmental Investigations 10

3.2 Data Comparison to Michigan Act 451, Part 201 Criteria 12

3.3 Exposure Pathways 13

3.3.1 Source Control and Existing Exceedances 13
3.3.2 Groundwater Risks to Drinking Water Uses 14
3.3.3 Groundwater Risks for Indoor Air Hazards 14
3.3.4 Groundwater Risk of Hazard to Surface Water Resources 14
3.3.5 Soil Risks from Direct Contact Exposures 15
3.3.6 Soil Risks from Ambient Air Inhalation Exposures 15
3.3.7 Soil Risks from Indoor Air Inhalation Exposures 15
3.3.8 Soil Risk to Drinking Water Uses of Groundwater 16
3.3.9 Soil Risk for Groundwater to Pose Hazard to Surface Water 16
3.3.10 Risk of Soils Runoff to Surface Waters 16
3.3.11 Acute Toxic and Physical Hazard Risks 17
3.3.12 Potential Fire or Explosion Hazards 17
3.3.13 Other Hazardous Substance Risks at or Posed by the Site 17

3.3.14 Aesthetic Impacts 17
3.4 Evaluation of Applicable Criteria for Comparison 18
3.5 AOI 1: Adjacent Properties – East of Buchanan Avenue SW 18
3.5.1 Historical Operations 18
3.5.2 Previous Investigations and Remedial Actions 19
3.5.3 Current Status and Conclusions 20
3.6 AOI 2: Adjacent Properties – Along Clay Avenue SW 21
3.6.1 Historical Operations 21
3.6.2 Previous Investigations and Remedial Actions 21
3.6.3 Current Status and Conclusions 21
3.7 AOI 3: Adjacent Properties – West Side of Cole Drain 21
3.7.1 Historical Operations 21
3.7.2 Previous Investigations and Remedial Actions 21
3.7.3 Current Status and Conclusions 23
3.8 AOI 4: Historical Site Operations 23
3.8.1 AOI 4.1: Long-term Industrial Operations – Main Parcel 23
3.8.1.1 Historical Operations 23
3.8.1.2 Previous Investigations and Remedial Actions 23
3.8.1.3 Current Status and Recommendations 24
3.8.2 AOI 4.2: Historical Operations – Western Parcel 24
3.8.2.1 Historical Operations 24
3.8.2.2 Previous Investigations and Remedial Actions 25
3.8.2.3 Current Status and Conclusions 25
3.8.3 AOI 4.3: Historical Operations – Northern Parcel 25
3.8.3.1 Historical Operations 25
3.8.3.2 Previous Investigations and Remedial Actions 26
3.8.3.3 Current Status and Conclusions 26
3.9 AOI 5: Release from Press HS-5 26
3.9.1 Historical Operations 26
3.9.2 Previous Investigations and Remedial Actions 26
3.9.3 Current Status and Conclusions 26
3.10 AOI 6: LNAPL and SVOC-impacted Groundwater 27
3.10.1 Historical Operations 27
3.10.2 Previous Investigations and Remedial Actions 27
3.10.3 Current Status and Conclusions 28
3.11 AOI 7: Former Metal Finishing Operations 28
3.11.1 AOI 7.1 – Bonderizing Operations 28
3.11.1.1 Historical Operations 28
3.11.1.2 Previous Investigations and Remedial Actions 28
3.11.1.3 Current Status and Conclusions 28
3.11.2 AOI 7.2 – Lacquer and Cement Spray 28
3.11.2.1 Historical Operations 28
3.11.2.2 Previous Investigations and Remedial Actions 29
3.11.2.3 Current Status and Recommendations 29
3.11.3 AOI 7.3 – Anti-rust Spray Booth No. 1 29
3.11.3.1 Historical Operations 29
3.11.3.2 Previous Investigations and Remedial Actions 29

3.11.3.3 Current Status and Conclusions 29
3.11.4 AOI 7.4 – Anti-rust Spray Booth No. 2 30
3.11.4.1 Historical Operations 30
3.11.4.2 Previous Investigations and Remedial Actions 30
3.11.4.3 Current Status and Conclusions 30
3.11.5 AOI 7.5 – Anti-rust Spray Booth No. 3 30
3.11.5.1 Historical Operations 30
3.11.5.2 Previous Investigations and Remedial Actions 30
3.11.5.3 Current Status and Conclusions 30
3.11.6 AOI 7.6 – Anti-rust Spray Booth No. 4 31
3.11.6.1 Historical Operations 31
3.11.6.2 Previous Investigations and Remedial Actions 31
3.11.6.3 Current Status and Conclusions 31
3.11.7 AOI 7.7 – Former West Paint Booth 31
3.11.7.1 Historical Operations 31
3.11.7.2 Previous Investigations and Remedial Actions 31
3.11.7.3 Current Status and Conclusions 31
3.11.8 AOI 7.8 – Former Paint Booth (Current Steam Clean Booth) 32
3.11.8.1 Historical Operations 32
3.11.8.2 Previous Investigations and Remedial Actions 32
3.11.8.3 Current Status and Conclusions 32
3.11.9 AOI 7.9 – Former East Paint Booth 32
3.11.9.1 Historical Operations 32
3.11.9.2 Previous Investigations and Remedial Actions 32
3.11.9.3 Current Status and Conclusions 32
3.12 AOI 8.0 – Underground Storage Tanks (USTs) 33
3.12.1 AOI 8.1 – Mineral Spirits and Mineral Seal Oil USTs 33
3.12.1.1 Historical Operations 33
3.12.1.2 Previous Investigations and Remedial Actions 33
3.12.1.3 Current Status and Conclusions 34
3.12.2 AOI 8.2 – Former Gasoline and Diesel USTs 34
3.12.2.1 Historical Operations 34
3.12.2.2 Previous Investigations and Remedial Actions 34
3.12.2.3 Current Status and Conclusions 34
3.12.3 AOI 8.3 – Former Heating Oil and Oil USTs 35
3.12.3.1 Historical Operations 35
3.12.3.2 Previous Investigations and Remedial Actions 35
3.12.3.3 Current Status and Conclusions 35
3.12.4 AOI 8.4 – Former 5,000-Gallon and 8,000-Gallon Gasoline USTs 35
3.12.4.1 Historical Operations 35
3.12.4.2 Previous Investigations and Remedial Actions 36
3.12.4.3 Current Status and Conclusions 36
3.12.5 AOI 8.5 – Former 1,000-Gallon Gasoline UST No. 1 36
3.12.5.1 Historical Operations 36
3.12.5.2 Previous Investigations and Remedial Actions 36
3.12.5.3 Current Status and Conclusions 37
3.12.6 AOI 8.6 – Former 1,000-Gallon Gasoline UST No. 2 37
3.12.6.1 Historical Operations 37
3.12.6.2 Previous Investigations and Remedial Actions 37
3.12.6.3 Current Status and Conclusions 37
3.12.7 AOI 8.7 – Potential UST (near Column O, Row 45) 38
3.12.7.1 Historical Operations 38
3.12.7.2 Previous Investigations and Remedial Actions 38
3.12.7.3 Current Status and Conclusions 38

3.13 AOI 9 – Former Wastewater Treatment Plant (WWTP) 38
3.13.1 Historical Operations 38
3.13.2 Previous Investigations and Remedial Actions 39
3.13.3 Current Status and Conclusions 39
3.14 AOI 10 – Power House Operations 40
3.14.1 AOI 10.1 - Former Power House (most recent) 40
3.14.1.1 Historical Operations 40
3.14.1.2 Previous Investigations and Remedial Actions 40
3.14.1.3 Current Status and Conclusions 41
3.14.2 AOI 10.2 - Former Power House 41
3.14.2.1 Historical Operations 41
3.14.2.2 Previous Investigations and Remedial Actions 41
3.14.2.3 Current Status and Conclusions 42
3.15 AOI 11 - Former AOF House 42
3.15.1 Historical Operations 42
3.15.2 Previous Investigations and Remedial Actions 42
3.15.3 Current Status and Conclusions 42
3.16 AOI 12 - Former Cooling Tower Basin 42
3.16.1 Historical Operations 42
3.16.2 Previous Investigations and Remedial Actions 43
3.16.3 Current Status and Conclusions 43
3.17 AOI 13 - Former Cooling Water Spray Pond 43
3.17.1 Historical Operations 43
3.17.2 Previous Investigations and Remedial Actions 43
3.17.3 Current Status and Conclusions 43
3.18 AOI 14 - Former Sludge Bed 44
3.18.1 Historical Operations 44
3.18.2 Previous Investigations and Remedial Actions 44
3.18.3 Current Status and Conclusions 44
3.19 AOI 15 – Baler Operations 45
3.19.1 AOI 15.1 – Former Main Manufacturing Building Balers 45
3.19.1.1 Historical Operations 45
3.19.1.2 Previous Investigations and Remedial Actions 45
3.19.1.3 Current Status and Conclusions 45
3.19.2 AOI 15.2 – Former Baler House 45
3.19.2.1 Historical Operations 45
3.19.2.2 Previous Investigations and Remedial Actions 46
3.19.2.3 Current Status and Conclusions 46
3.19.3 AOI 15.3 – Former Baler House (most recent) 46
3.19.3.1 Historical Operations 46
3.19.3.2 Previous Investigations and Remedial Actions 46
3.19.3.3 Current Status and Conclusions 47
3.20 AOI 16 – Former Heat Treat Operations 47
3.20.1 AOI 16.1 –Main Manufacturing Building – Area No. 1 47
3.20.1.1 Historical Operations 47
3.20.1.2 Previous Investigations and Remedial Actions 47
3.20.1.3 Current Status and Conclusions 47

3.20.2 AOI 16.2 –Main Manufacturing Building – Area No. 2 47
3.20.2.1 Historical Operations 47
3.20.2.2 Previous Investigations and Remedial Actions 48
3.20.2.3 Current Status and Conclusions 48
3.20.3 AOI 16.3 –Former Heat Treat Building No. 1 48
3.20.3.1 Historical Operations 48
3.20.3.2 Previous Investigations and Remedial Actions 48
3.20.3.3 Current Status and Conclusions 48
3.20.4 AOI 16.4 –Former Heat Treat Building No. 2 49
3.20.4.1 Historical Operations 49
3.20.4.2 Previous Investigations and Remedial Actions 49
3.20.4.3 Current Status and Conclusions 49

3.21 AOI 17 – Former Tool and Die Operations 49

3.21.1 AOI 17.1 –Main Manufacturing Building Operations 49
3.21.1.1 Historical Operations 49
3.21.1.2 Previous Investigations and Remedial Actions 49
3.21.1.3 Current Status and Conclusions 50
3.21.2 AOI 17.2 – Historical Exterior Die Storage 50
3.21.2.1 Current Status and Conclusions 50

3.22 AOI 18 – Former Coolant Recovery System 51

3.22.1 Historical Operations 51
3.22.2 Previous Investigations and Remedial Actions 51
3.22.3 Current Status and Conclusions 51

3.23 AOI 19 – Former Stamping Operations 51

3.23.1 Historical Operations 51
3.23.2 Previous Investigations and Remedial Actions 51
3.23.3 Current Status and Conclusions 52

3.24 AOI 20 – Above Ground Storage Tanks (ASTs) 52

3.24.1 AOI 20.1 Oil Stores ASTs 52
3.24.1.1 Historical Operations 52
3.24.1.2 Previous Investigations and Remedial Actions 52
3.24.1.3 Current Status and Conclusions 52
3.24.2 AOI 20.2 – South Pump House AST 53
3.24.2.1 Historical Operations 53
3.24.2.2 Previous Investigations and Remedial Actions 53
3.24.2.3 Current Status and Conclusions 53
3.24.3 AOI 20.3 – Former North Pump House AST 53
3.24.3.1 Historical Operations 53
3.24.3.2 Previous Investigations and Remedial Actions 53
3.24.3.3 Current Status and Conclusions 53
3.24.4 AOI 20.4 – Cooling Tower Pump House AST 53
3.24.4.1 Historical Operations 53
3.24.4.2 Previous Investigations and Remedial Actions 54
3.24.4.3 Current Status and Conclusions 54
3.24.5 AOI 20.5 – Former Bulk Deadener AST 54
3.24.5.1 Historical Operations 54
3.24.5.2 Previous Investigations and Remedial Actions 54
3.24.5.3 Current Status and Conclusions 54

3.25 AOI 21 – Substations 54

3.25.1 Historical Operations 54
3.25.2 Previous Investigations and Remedial Actions 56
3.25.3 Current Status and Conclusions 56

3.26 AOI 22 – Stormwater Retention Pond 56

3.26.1 Historical Operations 56
3.26.2 Previous Investigations and Remedial Actions 57
3.26.3 Current Status and Conclusions 57

3.27 AOI 23 – Wood Floor Block 57

3.27.1 Historical Operations 57
3.27.2 Previous Investigations and Remedial Actions 57
3.27.3 Current Status and Conclusions 58

3.28 AOI 24 – Former Tar House 58

3.28.1 Historical Operations 58
3.28.2 Previous Investigations and Remedial Actions 58
3.28.3 Current Status and Conclusions 60

3.29 AOI 25 – Former Maintenance Degreaser 60

3.29.1 Historical Operations 60
3.29.2 Previous Investigations and Remedial Actions 60
3.29.2.1 Additional Soil Investigation – 2014 61
3.29.2.2 Historical Sample Location Survey 61
3.29.2.3 Soil Investigation Activities 61
3.29.2.4 Groundwater Investigation Activities 61
3.29.3 COC Temporal Trends in Groundwater 61
3.29.3.1 Concentration Trend Analysis 62
3.29.3.2 Summary 62
3.29.4 COC Spatial Trends 62
3.29.5 Current Status and Conclusions 62

3.30 AOI 26 – Additional Former Degreasing Operations 63

3.30.1 AOI 26.1 – Shell Cooler After Degreaser 63
3.30.1.1 Historical Operations 63
3.30.1.2 Previous Investigations and Remedial Actions 63
3.30.1.3 Current Status and Conclusions 63
3.30.2 AOI 26.2 – Former Degreaser (U-46) 63
3.30.2.1 Historical Operations 63
3.30.2.2 Previous Investigations and Remedial Actions 63
3.30.2.3 Current Status and Conclusions 64
3.30.3 AOI 26.3 – Former Degreaser (RS-9) 64
3.30.3.1 Historical Operations 64
3.30.3.2 Previous Investigations and Remedial Actions 64
3.30.3.3 Current Status and Conclusions 64
3.30.4 AOI 26.4 – Former Degreaser (O-44) 65
3.30.4.1 Historical Operations 65
3.30.4.2 Previous Investigations and Remedial Actions 65
3.30.4.3 Current Status and Conclusions 65

3.31 AOI 27 – Oil Stores Bulk Unload Area (Bulk Unload Area) 65

3.31.1 Historical Operations 65
3.31.2 Previous Investigations and Remedial Actions 65
3.31.2.1 Bulk Unload Area Remedial Excavation – Summer 2015 67

3.31.2.2 PCB Area Excavation 69
3.31.3 Current Status and Conclusions 70
3.32 AOI 28 – Additional Bulk Load and Unload Areas 70
3.32.1 Historical Operations 70
3.32.2 Previous Investigations and Remedial Actions 70
3.32.3 Current Status and Conclusions 70
3.33 AOI 29 – Former Incinerators 71
3.33.1 AOI 29.1 – Former Incinerator Area No. 1 71
3.33.1.1 Historical Operations 71
3.33.1.2 Previous Investigations and Remedial Actions 71
3.33.1.3 Current Status and Conclusions 71
3.33.2 AOI 29.2 – Former Incinerator Area No. 2 71
3.33.2.1 Historical Operations 71
3.33.2.2 Previous Investigations and Remedial Actions 71
3.33.2.3 Current Status and Conclusions 71
3.34 AOI 30 – Elevator Pits 72
3.34.1 AOI 30.1 – Passenger Elevator 72
3.34.1.1 Historical Operations 72
3.34.1.2 Previous Investigations and Remedial Actions 72
3.34.1.3 Current Status and Conclusions 72
3.34.2 AOI 30.2 – Freight Elevator No. 1 72
3.34.2.1 Historical Operations 72
3.34.2.2 Previous Investigations and Remedial Actions 72
3.34.2.3 Current Status and Conclusions 72
3.34.3 AOI 30.3 – Freight Elevator No. 2 73
3.34.3.1 Historical Operations 73
3.34.3.2 Previous Investigations and Remedial Actions 73
3.34.3.3 Current Status and Conclusions 73
3.34.4 AOI 30.4 – Former Freight Elevator 73
3.34.4.1 Historical Operations 73
3.34.4.2 Previous Investigations and Remedial Actions 73
3.34.4.3 Current Status and Conclusions 73
3.35 AOI 31 – Scrap Metal Storage Pad 74
3.35.1 Historical Operations 74
3.35.2 Previous Investigations and Remedial Actions 74
3.35.3 Current Status and Conclusions 74
3.36 AOI 32 – Compactor 74
3.36.1 Historical Operations 74
3.36.2 Previous Investigations and Remedial Actions 74
3.36.3 Current Status and Conclusions 75
3.37 AOI 33 – Railroad Track Operations 75
3.37.1 Historical Operations 75
3.37.2 Previous Investigations and Remedial Actions 75
3.37.3 Current Status and Conclusions 76
3.38 AOI 34 – Battery Charging Areas 76
3.38.1 Historical Operations 76
3.38.2 Previous Investigations and Remedial Actions 76

3.38.3 Current Status and Conclusions 76
3.39 AOI 35 – Process Infrastructure 76
3.39.1 Historical Operations 76
3.39.2 Previous Investigations and Remedial Actions 76
3.39.3 Current Status and Conclusions 77
3.40 AOI 36 – Potential On-Site Fill Activities 77
3.40.1 Historical Operations 77
3.40.2 Previous Investigations and Remedial Actions 77
3.40.3 Current Status and Conclusions 77
3.41 AOI 37 – Hazardous Waste Storage Areas 77
3.41.1 AOI 37.1 – Former Hazardous Waste Storage Areas – Main Plant 78
3.41.1.1 Historical Operations 78
3.41.1.2 Previous Investigations and Remedial Actions 78
3.41.1.3 Current Status and Conclusions 78
3.41.2 AOI 37.2 – Former Hazardous Waste Storage Areas – South of WWTP 78
3.41.2.1 Historical Operations 78
3.41.2.2 Previous Investigations and Remedial Actions 78
3.41.2.3 Current Status and Conclusions 78
3.41.3 AOI 37.3 – Former Hazardous Waste Storage Areas – Western Property Boundary 78
3.41.3.1 Historical Operations 78
3.41.3.2 Previous Investigations and Remedial Actions 79
3.41.3.3 Current Status and Conclusions 79
3.41.4 AOI 37.4 – Former Hazardous Waste Storage Area (most recent) 79
3.41.4.1 Historical Operations 79
3.41.4.2 Previous Investigations and Remedial Actions 79
3.41.4.3 Current Status and Conclusions 79
3.42 AOI 38 – Switch House Operations 79
3.42.1 AOI 38.1 – Former Switch House 79
3.42.1.1 Historical Operations 79
3.42.1.2 Previous Investigations and Remedial Actions 80
3.42.1.3 Current Status and Conclusions 80
3.42.2 AOI 38.2 – Current Switch House 80
3.42.2.1 Historical Operations 80
3.42.2.2 Previous Investigations and Remedial Actions 80
3.42.2.3 Current Status and Conclusions 80
3.43 AOI 39 – PCB Areas 81
3.43.1 AOI 39.1 – PCB Area No. 1 81
3.43.1.1 Previous Investigations and Remedial Actions 81
3.43.1.2 Current Status and Conclusions 81
3.43.2 AOI 39.2 – PCB Area No. 2 81
3.43.2.1 Previous Investigations and Remedial Actions 81
3.43.2.2 Current Status and Conclusions 81

1. Introduction

GHD Services Inc. (GHD) has prepared this No Further Action (NFA) report on behalf of Revitalizing Auto Communities Environmental Response (RACER) Trust for the former Grand Rapids Metal Plant property located at 300 and 301 36th Street SW in Wyoming, Michigan (Site). The former Grand Rapids Metal Plant property is currently on the Part 201 Site List (Site Identification No. 41000115). The Site location is presented on Figure 1.1.

1.1 Scope and Purpose of the NFA Request

RACER is requesting a NFA approval from the Michigan Department of Environmental Quality (MDEQ) related to the former Grand Rapids Metal Plant property located at 300 and 301 36th St SW in Wyoming, Michigan (referred to in the report as the "Site"). This NFA request includes only the Site and not the entire "Facility" (as defined in Section 20101(s) of the Michigan Natural Resources and Environmental Protection Act [NREPA]) as a whole wherein "Facility" refers to any property that has been affected by the Site's historical operations such that groundwater or soil contamination is present in excess of the concentrations that satisfy the cleanup criteria for unrestricted residential use. The current Facility includes properties to the north of the Site due to the presence of a groundwater contaminant plume that has migrated beyond the Site property boundary (as depicted on Figure 1.2):

The purpose of the NFA Report is to describe and document pursuant to Section 20114d of the NREPA, actions that have been performed at the Site to satisfy the requirements of Part 201 of NREPA by meeting "Limited Nonresidential" criteria relative to known historical releases of substances to soil and groundwater at the Site.

The remainder of this NFA Report will describe conditions of soil and groundwater contamination located on-Site. This NFA request is related specifically to the properties located at 300 and 301 36th St SW, Wyoming, Michigan as depicted in Figure 1.3. The NFA Report identifies areas of interest at the entire Facility, but references to off-Site conditions should be considered to be included for information purposes only. A future NFA request will be developed and submitted to address off-Site conditions at the Facility.

1.2 Report Organization

The remainder of this NFA Report is organized as follows:

- Section 2 Site Description and Background
- Section 3 Site Characterization and Criteria Evaluation
- Section 4 Response Activities and Remedial Actions
- Section 5 Post Closure Plan
- Section 6 References

2. Site Description and Background

2.1 Property Location and Setting

The current Site addresses for the former Grand Rapids Metal Plant facility are 300 and 301 36th Street SW in the City of Wyoming, Kent County, Michigan. The Site is currently owned by the City of Wyoming Brownfield Redevelopment Authority (WBRA).

Based on the review of information available at the on-line Kent County Property Information System, the Site is currently comprised of two parcels of land with associated addresses, as follows:

- Parcel Identification No. 41-17-24-201-007 – 300 36th Street SW
- Parcel Identification No. 41-17-13-455-052 – 301 36th Street SW

The property associated with the address of 300 36th Street SW is comprised of 75.00 acres of land and is the main portion of the Site. This portion of the Site was utilized for manufacturing and support operations associated with plant operations; and was the location of the majority of the former Site structures. This portion of the Site is bound to the north by 36th Street SW, to the east by Buchanan Street SW, to the south by 40th Street SW, and to the west by the railroad tracks and is zoned I2, which is Industrial District – General.

The property associated with the address of 301 36th Street SW is comprised of approximately 5.8 acres of land and was primarily utilized as an asphalt-paved employee parking lot with a small structure that is part of the removed groundwater pump and treat system. This portion of the Site is located north of 36th Street SW and is zoned P1, which is Vehicular Parking District.

Easements are reportedly present on the Site, including: sewer and water main easement with the City of Wyoming; utility easements with Consumers Energy Company (Consumers); reservation of easement in the vacated portions of 40th Street SW, Buchanan Avenue SW, and Birchwood Avenue on the Site; and easement for highway purposes with Kent County.

The Site's use has been restricted to Nonresidential use consistent with the Amended and Restated Declaration of Restrictive Covenant (RC) recorded on August 31, 2017 with the Kent County Register of Deeds. The RC includes other restrictions, prohibitions, and provisions. A copy of the RC is presented in Appendix A.

2.2 Current and Historical Ownership and Operations

The Site was developed prior to 1936 for residential and cultivated agricultural uses. In 1936, the portion of the Site bound to the north by 36th Street SW, to the east by Buchanan Avenue SW, to the west by railroad tracks, and to the south by 40th Street SW, was developed by General Motors Corporation (GMC) for an automobile components manufacturing plant. The plant was dedicated on December 5, 1936 as Plant No. 1 of the Grand Rapids Stamping Division of Fisher Body. The original portion of the former Main Manufacturing Building and original Power House were constructed in 1936 and comprised 437,351 square feet of floor space including both production and administrative space. Numerous additions/renovations and demolitions to the structures at the

Site occurred between 1937 and 2006, as detailed in a Current Conditions Report (CCR) prepared for the Site and submitted to the MDEQ in December 2010.

In 1942, the Site produced mounts for 90 mm anti-aircraft weapons, a 120 mm anti-aircraft dual purpose gun, parts and assemblies for the B-29, B-25 and XP-75 aircraft, parts for the M-8, M-24, M-4, M-10, and M-26 tanks, 5-inch naval gun breech housings, 155 mm shells, and machine tools in support of World War II. In 1945, operations returned to automotive parts production.

In 1984, the Fisher Body Division dissolved and the Site became part of the Chevrolet-Pontiac-GM of Canada (CPC) Group. In 1992, during restructuring within GMC, the Site became part of the Cadillac Luxury Car Division (CLCD). In 1997, the Site became part of the Metal Fabricating Division (MFD) of GMC North American Operations (NAO).

The Site was primarily operated as a metal fabrication and assembly plant. The primary manufacturing process involved several operations including tool and die operations, blanking, metal stamping (conventional and transfer presses), and assembly. The manufacturing process and support operations historically included metal stamping, plating operations, painting, acetylene gas generation, scrap metal handling, and heat treating. Ancillary operations conducted at the Site included the receipt and storage of raw materials, hazardous and nonhazardous waste management, equipment maintenance activities, product and materials handling, power generation, the shipment of final goods, wastewater treatment, scrap metal handling, and administrative activities.

Primary operations conducted at the Site by GMC ceased on May 29, 2009. GMC continued to own and conduct limited operations at the Site until June 1, 2009, when they filed for bankruptcy under Chapter 11 of the United States Bankruptcy Code. On July 10, 2009, GMC changed its name to Motors Liquidation Company (MLC), and sold certain assets, to a new entity, which is now known as General Motors LLC (GM LLC). The Site was not included in the sale and ownership remained with MLC. GM LLC leased the Site from MLC beginning on July 10, 2009. From July 10, 2009 to December 17, 2009, GM LLC conducted limited Tool and Die Operations (TDO) on the Site, including the manufacture of tooling and dies for other GM LLC facilities, along with Site idling, decommissioning and support activities. GM LLC ceased operations and vacated the Site on June 30, 2010.

In October 2010, the United States Government announced that MLC had agreed to resolve its liabilities at 89 sites relating to specific environmental liabilities through an environmental response trust fund. An Environmental Response Trust Consent Decree and Settlement Agreement ("Settlement Agreement") was entered by the U.S. Bankruptcy Court for the Southern District of New York on March 29, 2011, in the case of *In re: Motors Liquidation Company*, et al., Debtors, Case No. 09-50026 (REG), among the Debtors, the United States of America, certain states including the State of Michigan, the Saint Regis Mohawk Tribe, and EPLET, LLC, (not individually but solely in its representative capacity as Administrative Trustee of the Trust).

Pursuant to the terms of the settlement agreement, RACER became effective on March 31, 2011 and interests in the 89 sites formerly owned by MLC, including this Site, were transferred to RACER at that time to conduct, manage, and fund cleanup. The Site was transferred to the WBRA on June

28, 2011. RACER retained certain responsibilities related to subsurface contamination associated with historical operations at the Site by GMC.

In 2011, under WBRA ownership of the Site, the Site was decommissioned and all of the structures on the Site (except for the Storm Sewer Pump House, Guard House, and Primary Switch House operated by Consumers) were demolished, with completion of demolition and Site re-grading occurring in Fall 2012. During the demolition of the Site structures, the building floor slabs were removed, and generally any below grade structures (i.e., pits, basements, etc.) were removed to 4-feet below the final design grade. Basement floors in the southern portion of the former plant were cracked and backfilled.

2.3 Regional Environmental Setting

2.3.1 Topography

The State of Michigan covers an area of approximately 58,527 square miles. The State's topography ranges from 572 to 1,979 feet above mean sea level (AMSL). The lowest point of elevation is found in southeastern Michigan along Lake Erie. The highest point is Mount Arvon, located in the Upper Peninsula.

The topography of Kent County, in Western Michigan, is characterized by rolling foothills, agricultural valleys, and the Grand River, which is the largest river in Michigan.

2.3.2 Land Use

Land use in Michigan consists primarily of automobile manufacturing, farming with the primary crops being corn, soybeans, and wheat, timber, and fishing.

2.3.3 Water Supply/Groundwater Use

The Great Lakes are the primary source of public, rural, and industrial water supply in 89 percent of the State of Michigan. The other sources of water supply come from surface water and groundwater. The City of Wyoming provides potable water to the Site and surrounding areas from the City of Wyoming Drinking Water Plant located in Wyoming, Michigan. The water source for the City of Wyoming Drinking Water Plant is Lake Michigan.

2.3.4 Regional Geology

Kent County is situated in an area near the southwestern margin of the Michigan Basin, in the Southern Upland physiographic region. Marshall Sandstone bedrock underlies all of Kent County and is Paleozoic in age from the Mississippian period. The Marshall Sandstone bedrock is overlain by the Michigan Formation. The Michigan Formation consists primarily of limestone, gypsum, and dolomite, interbedded with shale and sandstone. To the northeast, the Marshall Sandstone and Michigan Formation are progressively overlain by Bayport Limestone, Parma Sandstone, and then the Saginaw Formation. Overlying these rocks is a mass of glacial drift from the Wisconsinan Glacial stage consisting of moraines and former sand lake beds with thicknesses of less than 10 feet to several hundred feet. The glacial drift is characterized by ranges of materials from coarse gravel to fine lacustrine clays. The outwash is underlain by a clay layer that has been observed to

generally slope to the west-northwest at a gradient of approximately 1 foot in 15 feet. Bedrock in the area of the Site is encountered at approximately 100 feet below graded surface (ft bgs).

The Jurassic "red beds" form the bedrock surface interface between the glacial sediments in portions of Kent County and range from 50 to 150 feet with localized areas up to 200 feet thick. The "red beds" are often poorly consolidated or unconsolidated and consist primarily of clay, mudstone, siltstone, sandstone, shale, and gypsum. Beneath the Jurassic "red beds" the bedrock generally trends from northeast to southwest progression of the Saginaw Formation, Parma Sandstone/Bayport Limestone, Michigan Formation, and Marshall Sandstone with a general dip to the northeast. The Saginaw Formation consists of shale, coal, sandy shale, sandstone, limestone, and sandstone and ranges from 100 to 240 feet thick. The Parma Sandstone consists of medium grained to coarse grained sandstone, and is generally less than 100 feet thick. The Bayport Limestone consists of a fossiliferous, cherty limestone, often with interbedded sandstone and varies considerably in thickness. The Bayport Limestone and Parma Sandstone appear to interfinger throughout the Michigan Basin (Westjohn and Weaver, 1996a). The Michigan Formation consists of shale and gypsum with lenses of sandstone and limestone. The Marshall Sandstone is composed of stratigraphically continuous permeable sandstones. The upper sandstone is a quartzarenite to sublitharenite. A shale, siltstone, and/or carbonate layer separates the underlying lower sandstone. The lower Marshall sandstone ranges from a 50 to 125 foot fine grained to medium grained quartzarenite to sublitharenite to a 30 to 125 foot fine grained to medium grained litharenite. The Coldwater Shale consists of shale with lenses of sandstone, siltstone, and dolomite.

2.3.5 Regional Hydrogeology

Shallow groundwater in this area of Kent County is generally encountered at less than 20 ft bgs. Groundwater flow is influenced by local topography and surface water drainage ways, such as creeks and streams.

Bedrock aquifers near the Site include, in descending order, the Bayport Limestone, the Michigan Formation, and the Marshall Sandstone. Elevated concentrations of naturally occurring sulfate, cadmium, and bicarbonate limit the use of the Bayport Limestone aquifer as a drinking water supply. The Michigan Formation aquifer generally yields only small quantities of poor quality groundwater. The deepest regional aquifer, the Marshall Sandstone aquifer, provides large quantities of better quality groundwater. Groundwater flow in the Bayport Limestone bedrock aquifer in the area is generally uniform and to the southeast.

2.3.6 Regional Surface Water Hydrology

Michigan has over 36,000 miles of streams and rivers. The Site is located within the Lower Grand River drainage basin and the Plaster Creek watershed. The Lower Grand River drainage basin covers 3,020 square miles and includes the Rogue River, the Flat River, and the Thornapple River, which flow into the Grand River. Other tributaries to the Lower Grand River drainage basin include the Coldwater River, Buck Creek, Hager Creek, Sand Creek, Spring Creek, and Plaster Creek. The Plaster Creek watershed covers 58 square miles. Land use in the watershed consists in general of agricultural and urban use with other areas being forested or open land. Plaster Creek is located approximately 1.25 miles to the north-northeast of the Site. The Cole Drain, located adjacent to the west of the Site, discharges to Plaster Creek.

The Plaster Creek watershed meets the designated use for agriculture, is threatened for partial body contact, and is impaired for a warm water fishery, other indigenous aquatic life and wildlife, and total body contact recreation. The known stressors include sedimentation, nutrient loading, and Escherichia coli (E. coli) bacteria. The suspected stressors include thermal pollution and toxic substances.

2.3.7 Regional Ecological Setting

The Plaster Creek watershed is located in the ecoregion identified as the Eastern Temperate Forest. This is a very large ecoregion, extending from the Great Lakes to the Gulf of Mexico, and west to Texas, Oklahoma, Missouri, Minnesota, and Iowa. The region is characterized by dense and diverse forest cover. The area is also densely urbanized. Within this ecoregion are smaller regions including the Mixedwood Plains Level 2 ecoregion, in which the Site is located. According to the United States Geological Survey (USGS), the Site is located within the Regional Landscape Sub-subsection (VI.4.1 Lansing).

Based on 1992 USGS land use and land cover data, high and low intensity development (38 percent) and agricultural use (38 percent) make up the largest percentage of land use within the Plaster Creek watershed. Other land use/land cover within the Plaster Creek watershed includes forest land (16 percent), open land (5 percent), wetland (2 percent), and water (1 percent).

2.3.8 Regional Plant Life

The Level 2 ecoregion (Mixedwood Plains) in which the Site is located is characterized by dense canopy cover consisting of tall broadleaf deciduous trees and needle leaf conifers. Common trees to the region are oaks, hickories, maples, beech and some pine and basswood. In addition, the Regional Landscape Sub-subsection (VI.4.1 Lansing) is characterized by beech and sugar maple forests and hardwood swamps.

2.3.9 Regional Animal Life

Common animals that may be found in the region in which the Site is located include gray squirrel, raccoon, fox, and white tailed deer.

2.4 Site Setting

2.4.1 Site Land Use

The Site is zoned as Industrial District, General (I-2), and Vehicular Parking District (P-1) on the City of Wyoming, Michigan May 2014 Zoning Map, and was formerly operated as an automobile metal fabrication and assembly plant and associated parking areas. Currently, no manufacturing operations are conducted at the Site and the property is primarily vacant land. The Site currently consists of approximately 79.8 acres of land containing the Storm Sewer Pump House, the former Guard House, a primary Switchhouse operated by Consumers, asphalt and concrete-paved areas, and gravel covered, vegetated and landscaped areas.

2.4.2 Surrounding Land Use

The Site is located in a mixed industrial, commercial, residential and recreational area in the City of Wyoming, Michigan with Buchanan Ave SW and mixed industrial/residential properties to the east, mixed recreational and residential properties to the north, railroad tracks and mixed commercial/industrial properties to the west, and 40th Street SW and mixed residential and commercial/industrial properties to the south, as further discussed below.

2.4.3 Adjacent Properties

The Site is abutted to the north by Shoemaker Properties, LLC, Rivertown Community Federal Credit Union, Godwin Heights Public Schools athletic fields and residential properties, with Hillcroft Park located beyond.

The Site is abutted to the east by Buchanan Street followed by a CITGO gas station, Tint Factory, J&B Auto Repair, Floor Care Concepts, Inc., Enviro Pure, Allied Building Products Co., Canales, Inc., MSC Industrial Supply Co., Chase Creative Unlimited, Ter Molen & Hart Sheet Metal, Tracer Tool & Die Co., Gazic Trucking Inc. (former UAW), Conical Tapered Mills, a vacant commercial/industrial building, a vacant lot, Mark Maker Company, and residential properties.

The Site is abutted to the south by 40th Street followed by Accurate Alignment & Brake, Zinger Sheet Metal and residential properties.

The Site is abutted to the west by railroad tracks, Cole Drain, Consumers high-tension power lines, Consumers Service Center, The Macomb Group, J. O. Galloup (Kendall Electric, Inc. property), and Clay Avenue followed by Ryder Truck, Cummins, S4GR, LLC, K-Mac Plastics, Floyd's Electric, Consolidated Metal Products, Inc., Rose Pest Solutions, Donald Engineering, and a vacant commercial building.

2.4.4 Site Topography

According to the Grand Rapids West, Michigan USGS 7.5 minute quadrangle, the Site is located approximately 675 feet AMSL, with regional elevations ranging from 650 to 690 feet AMSL. The Site and surrounding area display gently rolling to relatively flat topographical features, with local topography sloping towards Cole Drain and Plaster Creek. Figure 1.1 presents the topography of the Site and surrounding area.

2.4.5 Site Geology

Information regarding the geologic conditions at the Site was collected during previous environmental investigations. Numerous soil borings were installed at the Site between 1981 and 2014.

The overburden at the Site generally consists of a sand and/or clay surficial layer containing various amounts of sand and gravel, with limited occurrences of peat and marl, underlain by interbedded layers of silt and clay material. During demolition and remedial excavation activities conducted between 2012 and 2015, fill material consisting of slag, cinders, fly ash, demolition debris, metalworking debris, and other miscellaneous refuse was observed at multiple locations across the

Site. Bedrock was not encountered during any of the environmental investigations conducted to date.

2.4.6 Site Hydrogeology

Groundwater at the Site is typically observed between 12 ft bgs and 22 ft bgs, but is known to exhibit seasonal fluctuations of up to a foot. Recent groundwater elevations recorded from February 2011 through April 2017 are summarized in Table 2.1. Groundwater contours from the April 2017 groundwater sampling event are provided on Figure 2.1. The potentiometric surface presented on Figure 2.1 indicates that Site groundwater flows to the north-northwest, towards the off-Site Cole Drain. This is consistent with groundwater elevations and flow identified during previous investigations and monitoring events conducted at the Site between 1985 and 2011. Historical groundwater elevations and groundwater contours were submitted to the MDEQ during the on-going investigations and monitoring conducted during the aforementioned timeframe.

In-situ tests were conducted at select wells 85-1, 85-7 (which was replaced by MW60-14 in 2014), 86-2 (which was replaced by MW35-12 in 2012), 86-3, 87-8, and 87-9 to determine the hydraulic conductivity of the upper groundwater unit during subsurface investigations conducted between 1986 and 1987. Based on the results of the in situ testing at these locations, the hydraulic conductivity ranged from 17.1 feet/day (85-1) to 192.6 feet/day (86-3), with an average hydraulic conductivity for 86-3, 87-8, and 87-9 of 149 feet/day. Based on the aforementioned average hydraulic conductivity and using a hydraulic gradient of 7.2 feet/mile and estimated porosity of 25 percent, the estimated groundwater velocity was calculated in 1987 to be 0.8 feet/day.

2.4.7 Site Surface Water Hydrology

Stormwater generated at the Site consists of precipitation and runoff from pervious and impervious surfaces. Stormwater generated at the Site either infiltrates the undeveloped, pervious portions of the property or flows via sheet flow to on-Site catch basins, which discharge to a stormwater retention pond present on the Consumers' right-of-way property to the west of the Site and eventually to Cole Drain, directly to Cole Drain at the northwestern corner of the Site, or to the City of Wyoming municipal storm sewer system.

There are no natural surface water bodies on the Site. The nearest natural surface water body to the Site is the Cole Drain, which runs as an open drainage ditch adjacent to and along the west side of the northern portion of the Site and flows north. Cole Drain is an enclosed drain upstream of the off-Site stormwater retention pond. Cole Drain discharges to Plaster Creek, which is part of the Lower Grand River drainage basin, and ultimately discharges to Lake Michigan. There are no lakes or significant ponds within one-mile of the Site. A constructed stormwater retention pond connected to the Site storm sewer system is located on property owned by Consumers adjoining the Site to the west across the railroad tracks.

GHD reviewed the National Wetlands Inventory (NWI) map for the Grand Rapids West, Michigan quadrangle to determine if any wetlands were mapped at the Site. Based on review of the NWI map, the stormwater retention pond is mapped as a Palustrine Unconsolidated Bottom Excavated (PUBx) wetland.

2.4.8 Site Groundwater Use

The Site is currently not provided with potable water due to the inactive status of the property; however, connections to the City of Wyoming municipal water supply system are available along 36th Street and Buchanan Avenue. The City of Wyoming Drinking Water Plant located in Wyoming, Michigan is the source of potable water to the Site. The water source for the City of Wyoming Drinking Water Plant is Lake Michigan. The shallow groundwater at the Site is not currently used as a potable water supply. As identified in Section 2.1, the use of groundwater at the Site is currently prohibited, except for short-term dewatering for construction purposes, as detailed in the current RC for the Site. There are no known users of the shallow groundwater in the vicinity of the Site.

No evidence of any water supply or irrigation wells has been observed by GHD. Numerous monitoring wells, which were installed during ongoing and historical subsurface investigations, are present at the Site.

Based on the review of available Site drawings and Sanborn maps, Deep Well No. 6 and an associated pump house were historically located to the west of the Main Manufacturing Building, near Column ZZ, Row 8 ½, with the well located at Row 7. The well and pump house were removed prior to 1971. No information was available regarding the abandonment procedures employed for the well. No information was available regarding potential wells associated with the former residential properties.

A groundwater pump and treat system was historically located in the central portion of the Main Manufacturing Building near MW35-12 (formerly 86-2) and along the northern property boundary near PW-Discharge (PW-DISCH). The on-Site groundwater pump and treat system operations were initiated in 1986, with PW-DISCH added in 1993. In May 2005, under the approval of the MDEQ, the groundwater pump and treat system was shut down. The majority of the groundwater pump and treat system was decommissioned, dismantled, and removed during demolition of the former Main Manufacturing Building between 2011 and 2012. Monitoring well 86-2 was destroyed in 2012 during the demolition of the former Main Manufacturing Building and replaced by MW35-12. PW-DISCH and the small structure for PW-DISCH remain present on the northern portion of the Site.

Groundwater was historically collected from foundation drainage near the former CX conveyor area and foundation drainage from PP1 area (located near the southeast corner of the former Main Manufacturing Building) and discharged to the off-Site stormwater retention pond, prior to discharge to the Cole Drain. The foundation drainage system was present along the eastern and southern portions of the former Main Manufacturing Building, within the basement areas of the former structure.

2.4.9 Ecology

The Site is located in an urbanized and developed portion of the City of Wyoming that has been developed for approximately 75 years. The Site is located in the Mixedwood Plains Level 2 ecoregion, which is characterized by mainly plains, some hills, and many small lakes.

Based on a threatened/endangered species review request response from the Michigan Department of Natural Resources and Environment (MDNRE)(currently MDEQ) dated March 11, 2010, "there are no known occurrences of federal- or state listed endangered, threatened, or

otherwise significant species, natural plant communities, or natural features at the locations(s) specified."

3. Site Characterization and Criteria Evaluation

3.1 Summary of Previous Environmental Investigations

A CCR was prepared for the former Grand Rapids Metal Plant in December 2010 and submitted to the MDEQ on December 23, 2010, which provides additional details regarding the historical operations and environmental investigations associated with the Site and adjacent properties. Thirty-eight Areas of Interest (AOIs) were identified in the CCR at the Site based on a review of available files, interviews with Site personnel, historical investigations and environmental activities, and Site inspections conducted during development of the CCR. Site inspections conducted in support of the CCR were completed between the fall of 2009 and spring of 2010. AOIs were defined as those areas of known treatment, storage, disposal, or release of nonhazardous and/or hazardous constituents to the environment or potential release of nonhazardous and/or hazardous constituents to the environment. The CCR provided the basis for determining whether or not further investigation was warranted at each AOI and the associated recommendation to MDEQ. Based on the CCR, 38 specific AOIs were identified for further evaluation or investigation. The AOIs identified for the Site are further evaluated in Sections 3.4 through 3.41. Table 3.1 also includes a summary of each AOI and the evaluations completed to address potential issues identified initially in the CCR and subsequently in additional field investigations and observations conducted during Site demolition and re-grading activities.

As identified in the CCR, numerous environmental investigations were conducted at the Site between 1981 and 2010. A summary of each investigation conducted between 1981 and 2010 is included in the CCR. Additional investigations and monitoring were conducted on behalf of RACER between 2011 and 2017. The environmental investigation and monitoring reports prepared for the Site during that timeframe are listed below.

includes references to the respective work plans related to each investigation report, in addition to the submittal and approval dates related to each proposed investigation.

- Data Package – 2011 Site-Wide Investigation prepared by CRA and dated June 7, 2011
- Data Package – 2011 Site-Wide Investigation – Stage II prepared by CRA and dated July 24, 2012
- Soil Containing PCB Cleanup Completion Summary Report prepared by CRA and dated May 16, 2013
- Summary of Sampling and Remedial Action Activities – 2011 and 2012 prepared by CRA and dated July 16, 2013
- Data Package – 2012 Site-Wide Investigation – Stage III prepared by CRA and dated March 11, 2013
- Data Package – 2013 Site-Wide Investigation – Stage IV prepared by CRA and dated August 6, 2013

- Closure Report – Underground Storage Tank No. 6 prepared by CRA and dated September 17, 2012
- Data Package – 2013 Site-Wide Investigation – Stage V prepared by CRA and dated November 12, 2013
- Data Package – 2013 Site-Wide Investigation – Stage VI and Fall 2013 Semi-Annual Groundwater Monitoring Report prepared by CRA and dated February 25, 2014
- Data Package – 2014 Bulk Unload Area Off-Site Investigation and Spring 2014 Semi-Annual Groundwater Monitoring Report prepared by CRA and dated August 4, 2014
- Summary of Activities – Well Abandonment/Installation and Groundwater Sampling prepared by CRA and dated September 10, 2014
- Draft – Summary of Findings – 2014 Bulk Unload Area Off-Site Investigation prepared by CRA and dated December 1, 2014
- Fall 2014 Semi-Annual Groundwater Monitoring Report prepared by CRA and dated December 14, 2014
- AOI 25 – Former Degreaser Area Investigation prepared by CRA and dated February 27, 2015
- Spring 2015 Semi-Annual Groundwater Monitoring Report prepared by CRA dated June 9, 2015
- Soil Containing PCB Cleanup Completion Summary Report prepared by GHD dated November 13, 2015
- Fall 2015 Semi-Annual Groundwater Monitoring Report prepared by GHD dated February 8, 2016.
- Spring 2016 Semi-Annual Groundwater Monitoring Report prepared by GHD dated July 12, 2016
- Fall 2016 Semi-Annual Groundwater Monitoring Report prepared by GHD dated March 30, 2017
- Spring 2017 Semi-Annual Monitoring report prepared by GHD dated August 11, 2017

Subsequent to the aforementioned investigations and Site demolition activities, two additional AOIs were identified as summarized below and further evaluated in Sections 3.42 and 3.43.

AOI 39 PCB Areas

AOI 39.1 PCB Area No. 1

AOI 39.2 PCB Area No. 2

AOI 40 On-Site Fill Area (Zc-5.5 Area)

Figure 3.1 presents the locations of the AOIs. Copies of the CCR and above listed documents were previously submitted to MDEQ and/or U.S. EPA.

3.2 Data Comparison to Michigan Act 451, Part 201 Criteria

Analytical results for the soil and groundwater samples from subsurface investigations were evaluated against the following Residential and Nonresidential Cleanup Criteria Requirements for Response Activity (Part 201 Criteria) established in Administrative Rules R299.1 to R299.50, effective December 30, 2013, pursuant to Part 201, Environmental Remediation, 1994 PA 451 as amended (Part 201):

Soil:

- Drinking Water Protection Criteria (DWPC)
- Groundwater Surface Water Interface Protection Criteria (GSIPC)
- Soil Volatilization to Indoor Air Inhalation Criteria (SVIAC)
- Volatile Soil Inhalation Criteria (VSIC)
- Particulate Soil Inhalation Criteria (PSIC)
- Direct Contact Criteria (DCC)
- Soil Saturation Concentration Screening Levels (C_{sat})

Groundwater:

- Drinking Water Criteria (DWC) – including health based drinking water criteria
- Groundwater Surface water Interface Criteria (GSIC)
- Groundwater Volatilization to Indoor Air Inhalation Criteria (GVIAC)
- Flammability and Explosivity Screening Levels (FESLs)
- Water Solubility Limits

The Site-specific GSIPC and GSIC were calculated based on a receiving water body hardness of 344 milligrams per liter (mg/L). This Site-specific hardness level was determined based on the results from a surface water sample collected from Cole Drain.

Table 3.2 presents vertical aquifer sample (VAS) results compared to Part 201 Criteria. Table 3.3 presents surface water sample results. Table 3.4 presents groundwater results from 2011 (during the decommissioning of the Site structures and removal of the building slabs) to present compared to Part 201 Criteria. Table 3.5 presents the Part 201 Residential and Nonresidential Soil Generic Cleanup Criteria. Tables 3.8.1 through 3.44 present soil sample results by AOI compared to Part 201 Criteria.

In addition to the Part 201 Criteria, soil sample analytical results for PCBs were compared to the TSCA High Occupancy Area Cleanup Level of 1 ppm/1 mg/kg total PCBs for bulk remediation waste (without further conditions) set forth in 40 CFR 761.61(a). Due to the unknown source or release date associated with PCBs discovered in soil on-Site, investigation and remediation of PCBs in soil on-Site was conducted under the requirements of TSCA and under the approval of the U.S. EPA. Soil sample exceedances of the TSCA criteria and remedial actions associated with PCB soil contamination are discussed in detail in Sections 3.28, 3.31, and 3.43.

A detailed evaluation and conclusions relative to on-Site conditions are presented on a pathway by pathway basis in the following sections.

3.3 Exposure Pathways

This section presents an evaluation of the risks associated with substances detected in Site media and in groundwater on-Site, including the on-Site migration of impacted groundwater. The evaluation of risk was completed to identify those substances, affected media, and locations of the area, if any, which would require remedial action to mitigate risks to levels consistent with current and foreseeable future land uses of the Site and protection standards specified under Part 201.

MDEQ has identified various "pathways" or "conditions to evaluate" in assessing compliance with Part 201 Criteria. The following sections demonstrate to what extent specific pathways (or conditions) at the Site are relevant and applicable; and, therefore may need to be further addressed by remedial actions.

As discussed above, the Site was restricted to Nonresidential use consistent with the RC executed on August 7, 2017 and recorded with the Kent County Register of Deeds. Therefore, comparison to the Part 201 Nonresidential Criteria is an appropriate benchmark for determining if further remedial actions are required on-Site and the discussions in Section 3.3.1 through 3.3.13 reflect this comparison.

3.3.1 Source Control and Existing Exceedances

No ongoing sources of hazardous substance releases are known to be present on Site. In light of information identified during the CCR and subsequent subsurface investigation, it is unlikely that significant exceedances of criteria exist on Site other than that identified and summarized herein.

Two potential off-Site sources of groundwater contamination unrelated to historical Site operations have been identified and evaluated during the subsurface investigations conducted associated with the Site relative to groundwater.

One area is located to the east of and upgradient in the direction of groundwater flow from the Site, along Buchanan Avenue. Chlorinated volatile organic compounds (cVOCs) were identified in soil and groundwater on the Conical Tapered Mills property, with concentrations of cVOCs present in a monitoring well on the east side of Buchanan Avenue higher than monitoring wells screened at a similar interval on the west side of Buchanan Avenue, with vertical profiling results indicating higher concentrations to the east of the Site as well. Additional details regarding the adjoining and surrounding properties to the east of the Site are discussed in Section 3.4.

A second area is located to the west of Cole Drain, north of 36th Street. The area to the northwest of the Site has been developed for industrial use since at least 1960 based on the review of historical aerial photographs. This area is located downgradient of the Site based on groundwater flow to the north-northwest. Chlorinated VOCs, tetrachloroethene (PCE) in particular, have been identified in groundwater samples collected from a monitoring well on the west side of the drain at concentrations ranging from 17 ug/L to 160 ug/L and PCE has not been detected in monitoring wells on the east side of the drain screened at a similar depth. Additional details regarding the adjoining and surrounding properties to the west of the Site are discussed in Sections 3.6 and 3.7.

For the purposes of the exposure pathway evaluations presented in Sections 3.3.2 through 3.3.13, impacts in these areas were considered off-Site sources and not part of the Site's groundwater impacts requiring further consideration.

3.3.2 Groundwater Risks to Drinking Water Uses

Groundwater is present at the Site at depths ranging between 12 and 22 ft bgs. Considering this and the fact that several constituents have been found to exceed Nonresidential DWC in groundwater, risks to drinking water use to substances in groundwater is a relevant potential exposure pathway.

No potable water wells are present on the Site currently and none are anticipated to be constructed at the Site that would utilize the groundwater, potable water in the vicinity of the Site is supplied by the City of Wyoming, and a RC is currently in place at the Site that prohibits the use of groundwater at, in, or under the Property as described above. As such, this exposure pathway does not require additional remedial action.

3.3.3 Groundwater Risks for Indoor Air Hazards

Constituents in groundwater have the potential to migrate to indoor air through volatilization through building floors. Indoor air inhalation of volatile constituents from groundwater is a relevant potential exposure pathway considering that there are structures on the Site.

However, based on groundwater sampling conducted to date, there are no known Nonresidential GVIAC exceedances on-Site and the current RC requires evaluation and/or mitigation of any potential vapor intrusion for any new building construction. Accordingly, there is no remedial action required for this exposure pathway on-Site.

3.3.4 Groundwater Risk of Hazard to Surface Water Resources

No surface water features exist on the Site. Cole Drain is present to the west and northwest of the Site as an open drainage way. Due to the down-gradient location of Cole Drain, the potential for groundwater to impact surface water resources is a relevant potential exposure pathway.

Groundwater monitoring and investigation activities have been conducted at the Facility since 1985. Groundwater monitoring events are currently conducted on a semi-annual basis. The monitoring wells nearest the western Site boundary serve as monitoring points for compliance with the GSI. In June 2014, one monitoring wells (85-7) on the Site was abandoned in accordance with State of Michigan requirements and a new monitoring well (MW60-14) was installed adjoining the abandoned location. Analytical results for 85-7 historically exhibited concentrations of elevated metals (i.e., zinc, copper, etc.) above the GSIC. The detected concentrations of metals could potentially be attributed to the construction material of the well, which consisted of a galvanized steel well casing and steel screen, as opposed to contamination resulting from historical operations at the Site. Monitoring results subsequent to the replacement of these well has not indicated any exceedances of the GSIC in downgradient monitoring wells serving as points of compliance.

3.3.5 Soil Risks from Direct Contact Exposures

Direct contact is a relevant potential exposure pathway due to the possibility for contact by construction/utility workers performing subsurface activities or in the event subsurface materials become exposed.

Excavation activities conducted to date have removed all but two sample locations with exceedances of Nonresidential DCC. The two soil sample locations (SB195-12 and SB297-13) that contain remaining Nonresidential DCC exceedances have been identified in the RC and are located at depths where the potential for contact is limited. Therefore, no additional remedial action is required for this exposure pathway.

3.3.6 Soil Risks from Ambient Air Inhalation Exposures

Substances in soil have the potential to volatilize to ambient air and also to migrate through particulate emissions (i.e., fugitive dust) at the Site. Therefore, these pathways are relevant potential exposure pathways.

Excavation activities to date have removed all by one sample location with exceedance of the Nonresidential VSIC. The soil sample analytical result from the 0 to 2-foot sample interval of SB08-05 is above the Nonresidential Infinite Source VSIC and the 5-meter Source VSIC for TCE; however, the soil sample from the 2 to 4-foot interval was below both criteria. Given this, the thickness of the “source” is a maximum of two feet or 0.6 meters. Given the thickness, the two criteria that are exceeded are not applicable. The Nonresidential Infinite Source VSIC does not apply because the vertical extent of contamination in this location has been vertically and horizontally delineated (i.e., samples were collected in 2-foot intervals in this area as part of an evaluation of residual TCE concentrations). Therefore, the concentration of TCE in the 0 to 2-foot sample interval of SB08-05 does not pose a significant risk.

Excavation activities conducted to date have removed all but one sample location with exceedance of Nonresidential PSIC. The soil sample location (SB297-13) that contains the remaining Nonresidential PSIC exceedance has been identified in the RC and is located at a depth where the potential for exposure is limited. Therefore, no additional remedial action is required for this exposure pathway.

3.3.7 Soil Risks from Indoor Air Inhalation Exposures

Constituents in soil have the potential to migrate to indoor air through volatilization through building floors. Indoor air inhalation of volatile constituents from soil is a relevant potential exposure pathway considering that there are structures on the Site.

Investigation activities conducted to date have identified several soil sample locations that exceed the Nonresidential SVIAC. However, these soil sample locations are not located near the existing structures on the Site. Soil samples collected near the existing structures did not exhibit concentrations of contaminants exceeding the Nonresidential SVIAC.

A RC is currently in place at the Site that requires evaluation and/or mitigation of potential indoor air inhalation exposures from hazardous substances prior to occupying existing structures or

construction of new structures on the Site. Therefore, no additional remedial action is required for this exposure pathway.

3.3.8 Soil Risk to Drinking Water Uses of Groundwater

Groundwater is present at the Site at a depth of approximately 12 to 22 feet bgs. Exceedances of soil criteria for the protection of groundwater as a drinking water source create the potential for unacceptable exposure if Site groundwater is used as a drinking water source; and, therefore is a relevant potential exposure pathway.

However, no potable water wells are present on the Site currently and none are anticipated to be constructed at the Site that would utilize the shallow groundwater, potable water in the vicinity of the Site is supplied by the City of Wyoming, and a RC is currently in place at the Site that prohibits the use of groundwater at, in, or under the Property as described above.

3.3.9 Soil Risk for Groundwater to Pose Hazard to Surface Water

As discussed above, no surface water features are present on the Site. The Cole Drain is present to the west and northwest of the Site as an open drainage way. Due to the down-gradient location of Cole Drain, the potential for soil risks to groundwater to impact surface water resources is a relevant potential exposure pathway.

GSIPC exceedances are present in soil on-Site; however, no GSIC exceedances have been identified in monitoring wells identified as point of compliance wells for GSIC. The monitoring wells nearest the western Site boundary serve as monitoring points for compliance with the GSI. As discussed above, monitoring results subsequent to the replacement of a galvanized monitoring well does not indicate any exceedances of the GSIC in downgradient monitoring wells serving as points of compliance.

3.3.10 Risk of Soils Runoff to Surface Waters

As discussed in Section 2.4.7, no surface water features are present on the Site.

Following demolition activities in 2012, the portions of the Site where impervious surfaces were removed was re-graded (primarily within the former Main Manufacturing Building footprint). The final grading of the Site was designed such that precipitation that falls on the now pervious surfaces of the Site is directed away from impervious surfaces and into several retention areas constructed in the footprint of the former Main Manufacturing Building. Slightly elevated overflow inlets were installed in some of the retention areas and connected to the on-Site storm sewers. The overflow inlets are situated several feet above the floor of the retention areas so storm water must rise to that level before it enters the storm sewer system.

The impervious areas surrounding the former footprint of the Main Manufacturing Building direct surface storm water via sheet flow to the on-Site catch basins that are connected to the nearby municipal storm sewer; however, there is limited potential for soil to runoff and collect in these catch basins due to the final Site grading and retention basin/overflow inlet design discussed above. Based on current Site conditions, risk of soil runoff conveying substances to surface waters is not a concern. Therefore, no additional remedial action is required for this exposure pathway.

3.3.11 Acute Toxic and Physical Hazard Risks

To evaluate potential acute toxicity and physical hazards of substances in soils, consideration is given to any parameters that are present at concentrations approaching or over the soil saturation (C_{sat}) or Water Solubility Limits. Exceedance of C_{sat} or the Water Solubility Limits suggests the potential presence of non-aqueous phase liquid (NAPL). Further evaluation to confirm or deny the presence of NAPL at the exceedance locations would be required.

Additionally, Flammability and Explosivity Screening Levels (FESLs) are available to screen parameters in groundwater as potential toxicity or physical hazards.

Based on investigations conducted to date, no known exceedances of C_{sat} or FESLs exist on Site. An isolated grab groundwater sample collected during the 2012 Site-wide Investigation from SB214-12 exhibited concentrations of several PAHs that exceeded the Water Solubility Limits; however, a permanent monitoring well installed in this location (MW57-13) did not identify the presence of any LNAPL.

Historically, LNAPL was observed in monitoring wells near former Column A-15 of the plant. Additionally, during Site demolition activities in 2012, LNAPL consisting of a sheen was observed on groundwater that infiltrated the basement excavation in this area. The LNAPL is discussed further in Section 3.10. No measurable LNAPL has been identified at the Site since 2007.

Based on review of representative current Site data, acute toxic and physical hazard risks are not believed to be a concern on-Site. Therefore, no additional remedial action is required for this exposure pathway.

3.3.12 Potential Fire or Explosion Hazards

As identified in Section 3.3.11, no acute toxic or physical hazards are currently known to exist on Site in soils or groundwater. Based on review of representative current Site data, no known potential fire or explosion hazards exist related to historic releases. Therefore, no additional remedial action is required for this exposure pathway.

3.3.13 Other Hazardous Substance Risks at or Posed by the Site

Site investigation activities have not identified any other hazardous substance risks at or posed by the Site related to releases.

3.3.14 Aesthetic Impacts

During investigations, observations conducted during demolition, and remedial actions, several areas on-Site were observed to contain soil or groundwater exhibiting aesthetic impairments. Soil and groundwater samples were collected from several types of each of the following materials; however, the analytical results did not indicate exceedances of the applicable Part 201 Criteria (as discussed in Section 3.4 below). The presence of the known aesthetic impacts includes:

- Soil and groundwater exhibiting petroleum or solvent-type odors
- Groundwater sample metals concentrations that exceed the aesthetic DWC values, but not the health-based DWC values

- Groundwater containing oil globules and/or surface sheen that were observed in former basement sumps and on the surface of groundwater that infiltrated excavations in the former basement during demolition activities conducted in 2012
- Fill soil and materials that exhibit staining, discoloration, or oil sheen
- Fill materials that include demolition debris (bricks, concrete, metal, glass and lumber), miscellaneous refuse (light bulbs, spent grinding wheels, plastic and glass containers, metal container debris), slag, cinders, fly ash, cooling pond sludge, metal grinding swarf (compressed metal fines and/or turnings), and railroad ties.

3.4 Evaluation of Applicable Criteria for Comparison

Based on the evaluation of the exposure pathways presented in Section 3.3 utilized in conjunction with the existing RC, soil sample results on-Site for additional delineation and/or subsequent excavation during the 2011 to 2014 investigation activities and subsequent interim remedial activities were compared to the following Part 201 Criteria:

- Nonresidential PSIC
- Nonresidential DCC

Based on the evaluation of the exposure pathways presented in Section 3.3 utilized in conjunction with the existing RC, groundwater sample results on-Site were compared to the Nonresidential DWC. On-Site groundwater sample results were compared to GSIC, if the well location was near Cole Drain.

The following sections present the environmental issues, investigations conducted, and evaluation of the data corresponding with each of the 40 AOIs identified during previous assessments based on the applicable criteria comparison discussed above.

3.5 AOI 1: Adjacent Properties – East of Buchanan Avenue SW

3.5.1 Historical Operations

Based on the review of historical information, the adjacent properties to the east of the Site, across Buchanan Avenue SW, have been operated as commercial/industrial properties since at least 1950, with a gas station operating on the properties associated with 3565 and/or 3636 Buchanan Avenue SW from between at least 1938 to 1975. Additional historical commercial/industrial occupation of properties noted on Sanborn maps and in city directories includes: a gas station at the intersection of 36th Street SW and Buchanan Avenue SW since at least 1966; a buried gas tank on the property located at 3700 Buchanan Avenue SW; a paint shop at 3818 Buchanan Avenue SW; auto repair facilities at 3826 Buchanan Avenue SW; heat treat operations at 3832 Buchanan Avenue SW; and a machine shop at 3890 Buchanan Avenue SW. In addition, the properties located adjacent to the east of the Site across Buchanan Avenue SW at 3890 Buchanan Avenue SW (Conical Tool Company), 3832 Buchanan Avenue SW (entity not listed), and 3840 Buchanan Avenue SW (Commercial Heat Treating Company) are listed in the Baseline Environmental Assessment (BEA) Database indicating exceedances of Part 201 Residential Criteria are present on those properties.

Additionally, the property located at 3887 South Division Avenue SW (entity not listed) is a Part 201 site. This property is approximately a half-mile southeast of the Site. Information in the environmental database search performed as part of the CCR indicated that the property had an "Inactive – no actions taken to address contamination" status and that the pollutant was tetrachloroethene (PCE). This address was also listed in the Conditionally Exempt Small Quantity Generator (CESQG) database as Mr. Easy Cleaners with no violations identified. Based on current observations, this address is occupied by Wash World, which is identified as a dry cleaner.

3.5.2 Previous Investigations and Remedial Actions

Freedom of Information Act (FOIA) reviews were previously conducted for the adjacent Conical Tapered Mills (formerly Conical Tool) property, located adjoining to the southeast of the Site. Chlorinated VOCs, including trichloroethene (TCE) and PCE, were identified on that property, which appear to be migrating onto the Site. A FOIA review was conducted in April 2003, to identify any potential upgradient sources of contamination along Buchanan Street, which may be migrating onto the Site. Based on the review of available information obtained from the FOIA request, the Conical Tapered Mills property, located hydraulically upgradient from the Site, was identified as a potential source of TCE and PCE. TCE was identified in soil and groundwater on the Conical Tapered Mills property at concentrations above the Part 201 Residential Criteria. PCE was also detected in groundwater above the Part 201 Residential Criteria at the Conical Tapered Mills property. However, it was not clear from the information reviewed whether all soil samples were analyzed for PCE. Insufficient information from the MDEQ files was present to determine a possible source location for PCE at the Conical Tapered Mills property. Additionally, the vertical extents of TCE and PCE in groundwater were not determined on the property, based on the information reviewed. Based on environmental investigation reports reviewed, excavation was conducted in two areas at the Conical Tapered Mills site. Neither of these excavations was conducted where the TCE was detected in soil above the Part 201 Residential Criteria.

Conical Tapered Mills is upgradient to the southeastern portion of the Site, where PCE and TCE were historically identified in groundwater on-Site above the Part 201 Nonresidential DWC and/or GSIC. In addition to the Conical Tapered Mills property, as described above, a property approximately a half-mile southeast of the Site that is currently operated as a dry cleaner was identified as a Part 201 site with PCE impacts.

In 2003, CRA conducted vertical aquifer sampling (VAS) on the Site along the eastern property line and near the southeastern corner of the former Main Manufacturing Building. Monitoring wells were installed in the locations of the VAS at the intervals exhibiting the highest concentrations of PCE. Based on the results of the VAS, PCE was identified at depths below the groundwater table migrating onto the Site, which was considered consistent with concentrations that would be present downgradient of a source area/release. A summary of the investigation and monitoring activities conducted in this area through 2010 is presented in the CCR.

The time of release, specific up-gradient/source area concentrations, and fate of PCE migrating on to the Site had not been identified. The screened interval for MW1-03, which is located directly adjacent to the Site on the west side of Buchanan Avenue, is from 30 to 35 feet bgs. Based on the review of analytical results obtained during the 2003 investigation conducted by CRA and summarized in a Data Report submitted to the MDEQ on March 2, 2004, vertical profiling results at

the water table indicated the detected concentration of PCE in a groundwater sample collected at 24 feet bgs during the VAS in this area was below the Part 201 GSIC. This was noted as important because at that location and depth, and at that concentration, it was unlikely that PCE was being collected by the Site's foundation drain system, which was present at approximately 20 feet bgs and served to collect groundwater in the areas surrounding the eastern (along Buchanan Avenue) and southern Main Manufacturing Building basement foundation perimeter. Groundwater was collected in the drain system and discharged to the retention pond located on the off-Site Consumers' Energy property, which in turn discharged to the Cole Drain, pursuant to a National Pollutant Discharge Elimination System (NPDES) permit.

During the 2013 Site-Wide Investigation to further evaluate the potential off-Site source, additional vertical profiling (VAS49-13) was conducted immediately adjacent to the northwestern corner of the Conical Tapered Mills property, within the City of Wyoming right-of-way on the east side of Buchanan Avenue upgradient of the Site. PCE was detected in groundwater samples collected from VAS49-13 at 16, 26, 36, and 39 ft bgs at concentrations exceeding Part 201 Residential and Nonresidential DWC and the GSIC. A confining clay layer was encountered at the boring terminus at approximately 39.5 ft bgs. Based on the vertical profiling results, a monitoring well (MW49-13) was installed in this location and screened from 34 to 39 ft bgs. Monitoring results to date indicate that higher concentrations of PCE and TCE are present in groundwater samples collected from MW49-13 across/east of Buchanan Avenue directly adjacent to the Site, than from MW1-03 across/west of Buchanan Avenue.

Based on the sample results from MW49-13 that confirmed the presence of an off-Site cVOC groundwater plume migrating onto the Site from the southeast, groundwater samples were collected from monitoring well MW49-13 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

A summary of groundwater, temporary well and VAS samples compared to Part 201 Criteria are presented in the environmental investigations listed in Section 3.1.

3.5.3 Current Status and Conclusions

The results of monitoring well and vertical aquifer sampling indicate the presence of a groundwater plume containing PCE at concentrations above the Part 201 Residential and Nonresidential DWC and the GSIC that has migrated from the southeast Site boundary to the northeast portion and approximate center of the Site, contributing additional cVOCs to the existing Site plume (discussed further under AOI 25). Further evaluation by RACER of the upgradient plume currently migrating onto the Site is not required.

3.6 AOI 2: Adjacent Properties – Along Clay Avenue SW

3.6.1 Historical Operations

Based on the review of the environmental database search results in the CCR, the Ryder Truck property located at 3663 Clay Avenue SW was listed in the MDEQ Leaking Underground Storage Tank (LUST) Database as having an open status. Additionally, the property located at 3940 Clay Avenue SW (entity not listed), to the south of the Clay Avenue Parking Lot portion of the Site, was listed in the BEA Database, indicating exceedances of Part 201 Criteria are present on that property; however, no information related to the specific exceedances of criteria was available.

3.6.2 Previous Investigations and Remedial Actions

Based on groundwater flow direction measured on the west side of Cole Drain, it appears that groundwater on the west side of the drain flows north-northeast.

A review of the LUST database indicated that the release associated with the Ryder Truck property was closed on February 2, 2012.

Specific investigation related to these properties was limited to evaluation of the Kendall Electric Property at 3838 Clay Ave SW which was historically part of the Site and an NFA Report for the property was approved in March 2015 (see AOI 4.2). Groundwater sample results from monitoring wells along the western Site boundary did not indicate the presence of impact on the Site that may be attributable to the adjoining properties.

3.6.3 Current Status and Conclusions

Based on the results of the investigation of AOI 4.2 and groundwater monitoring results along the western Site boundary, no additional action related to this AOI is necessary.

3.7 AOI 3: Adjacent Properties – West Side of Cole Drain

3.7.1 Historical Operations

The area to the northwest of the Site has been developed for industrial use since at least 1960, based on aerial photographs. Based on the nature of the long-term historical operations conducted on these properties, the groundwater flow direction to the north-northeast in this area making these properties downgradient and cross-gradient of the Site, and the known impacts on those properties above the Part 201 Criteria that may be commingling with the plume from the Site, these properties were identified as an AOI.

3.7.2 Previous Investigations and Remedial Actions

In 2004, VAS (HP11-04) was conducted on the east side of Cole Drain in approximately 10-foot intervals from the water table to the top of the clay layer (at 12, 22, 32, 42, 52, 62, and 69 feet bgs) to further evaluate the groundwater conditions relative to the cVOC plume associated with the Site. A clay confining layer was encountered at approximately 39.5 feet bgs. Analytical results did not indicate the presence of TCE above the Part 201 Residential DWC until 32 feet bgs or the presence

of PCE above the Part 201 Residential DWC until 42 feet bgs. PCE was detected above the Part 201 Residential DWC at concentrations of 17 µg/L (at 42 feet bgs) and 15 µg/L (at 52 feet bgs), and TCE was detected above the Part 201 Residential DWC at concentrations of 23 µg/L (at 32 feet bgs), 34 µg/L (at 42 feet bgs), 19 µg/L (at 52 feet bgs), 7.4 µg/L (at 62 feet bgs), and 17 µg/L (at 69 feet bgs). Based on the results of the VAS, MW11D-04 was installed and screened from 40 to 45 feet bgs in 2004, and MW11S-05 was installed and screened from 5 to 10 feet bgs in 2005. Subsequent to the installation of MW11D-04, concentrations of PCE and TCE have decreased in groundwater monitoring samples collected during routine monitoring events, with PCE non-detect and a detected concentration of TCE in October 2015 of 2.3 µg/L, which is below the Part 201 residential DWC.

Based on investigations conducted to date, PCE is present in groundwater in a monitoring well (MW17-06) on the west side of Cole Drain at concentrations above the Part 201 Residential and Nonresidential DWC and the GSIC. The monitoring well is located to the north of 36th Street on property owned by Consumers. Prior to installation of MW17-06, VAS was completed in approximately 10-foot intervals from the water table to the top of the clay layer (at 10, 20, 30, 40, 50, and 55 feet bgs). A clay confining layer was encountered at approximately 56 feet bgs. Analytical results did not indicate the presence of PCE above the Part 201 Residential DWC until the 50 and 55-foot intervals, with concentrations of 18 µg/L and 12 µg/L, respectively. TCE was also detected in these intervals at concentrations of 7.6 µg/L and 5.9 µg/L, respectively. Based on the results of the VAS, MW17-06 was installed and screened from 51 to 56 feet bgs in 2006. Subsequent to the installation of MW17-06, concentrations of PCE have increased and TCE concentrations have remained consistent in groundwater monitoring samples collected during routine monitoring events, with detected concentrations of PCE and TCE in October 2015 of 160 µg/L and 8.3 µg/L, respectively.

Additional monitoring wells (88-1, 88-2, 88-3, and 88-4) located on the west side of Cole Drain on property owned by Consumers, to the north of MW17-06, were installed in 1988. Based on monitoring results, neither PCE nor TCE have been detected in these wells.

During the 2013 Site-Wide Investigation, vertical profiling (VAS48-13) was conducted immediately north of 36th Street, west of the railroad tracks. VAS was completed in approximately 10-foot intervals from the water table to the top of the clay layer (at 16, 26, 36, 46, and 51 feet bgs). A clay confining layer was encountered at approximately 51.5 feet bgs. Groundwater samples collected from VAS48-13 did not detect any concentrations of PCE or TCE. A monitoring well (MW48-13) was installed in this location. Sampling conducted to date has not detected any cVOCs. MW48-13 is located southwest of MW17-06 and west of Cole Drain.

Based on analytical data collected to date for the well on the west side of Cole Drain and for the wells on the east side of Cole Drain, concentrations of PCE are higher on the west side of the drain than on the east side, suggesting the source of the PCE is to the west of Cole Drain. Groundwater flow direction in the area of Cole Drain appears to be to the north-northeast from the west side of the drain, and to the north-northwest on the east side of the drain, suggesting that Cole Drain is a gaining stream.

A summary of groundwater and VAS sample analytical results compared to Part 201 Criteria are presented in the environmental investigations listed in Section 3.1.. Refer to Figure 3.2 for sample locations.

3.7.3 Current Status and Conclusions

Based on the vertical aquifer and monitoring well sample results at this location, its location relative to the identified detection of PCE in MW17-06, and the groundwater flow direction determined on the west side of Cole Drain, it is likely that the source of cVOCs detected in MW17-06 originated from the industrial properties located immediately north of MW48-13 and not the Site. The composition of contaminants in groundwater samples collected semi-annually from MW17-06 is consistently different in nature than nearby monitoring well samples on the east side of Cole Drain collected at similar depths. The results are also consistently of a greater magnitude in concentration than any nearby monitoring locations, or any location that has been confirmed to be located in the extent of the Site's TCE plume. Based on the information presented above, no additional action related to this AOI is necessary.

3.8 AOI 4: Historical Site Operations

The majority of the Site was operated on a long-term basis as an industrial property dating back to 1936, including operations associated with stamping, machining, degreasing, metal finishing, and various other manufacturing operations and the associated industrial infrastructure (i.e. sewers, pits, etc.). Additionally, the properties to the north of 36th Street that also comprise the Site were utilized for a mixture of residential and commercial uses. These activities typically utilize, store and dispose of a variety of chemicals and; therefore, are considered an AOI. Individually known operations are further discussed below by former and/or current parcel.

3.8.1 AOI 4.1: Long-term Industrial Operations – Main Parcel

3.8.1.1 Historical Operations

The majority of the Site was operated on a long-term basis as an industrial property dating back to 1936, including operations associated with stamping, machining, degreasing, metal finishing, and various other manufacturing operations and the associated industrial infrastructure (i.e. sewers, pits, etc.). No specific documentation was available regarding chemicals used, chemical storage locations, or historic disposal practices during the entire timeframe the property has been utilized for industrial purposes. Industrial facilities like the Site typically, either currently or historically, use significant quantities of chlorinated solvents, heavy metals, PCBs, and petroleum products.

3.8.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation, SB41-11 was advanced in the area near Columns Q-R, Rows 42-43 where a paint storage room was identified on a 1950 drawing. In addition, SB42-11 was advanced in the area near Columns Q-R, Rows 51-52 where an oil storage room was identified on a 1950 drawing. Two soil samples were collected from SB41-11 and SB42-11 (1 to 3 feet bgs and 18 to 20 feet bgs) and submitted to the analytical laboratory for analysis of Target Compound List (TCL) VOCs, polynuclear aromatic hydrocarbons (PAHs), and Site-specific Target Analyte List

(TAL) metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC.

During the 2012 Stage III Site-Wide Investigation, SB189-12 was advanced adjacent to a former geotechnical boring conducted by Soils & Materials Engineers, Inc. (SME) as part of plant expansion activities in the 1980s. The historical stratigraphic soil boring log indicated a "solvent-like odor" in the original geotechnical boring. Three soil samples were collected from SB189-12 (0 to 2 feet bgs, 10.5 to 12.5 feet bgs, and 14 to 16 feet bgs) and submitted to the analytical laboratory for analysis of TCL VOCs, TCL Semi-Volatile Organic Compounds (SVOCs), Site-specific TAL metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. A temporary monitoring well was also installed in SB189-12 with the top of the screen set at 17 feet bgs. A groundwater sample was collected and submitted for analysis of TCL VOCs, TCL SVOCs, Site-specific TAL metals (dissolved) and PCBs. Manganese was detected above the Part 201 Nonresidential aesthetic-based DWC. No other compounds were detected in groundwater that exceeded the Part 201 Criteria.

Based on the results of the 2012 investigation, an additional soil boring (SB221-13) was advanced near SB189-12. Soil samples were collected from 1 to 3 feet bgs and 3 to 5 feet bgs based on field observations. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. A monitoring well (MW58-13) was installed in this location and screened from 13.5 to 18.5 feet bgs to monitor the potential for soil contaminants to impact groundwater. Groundwater samples collected from MW58-13 have not identified exceedances of any Part 201 Criteria. Soil sample analytical results are presented in Table 3.8.1. Refer to Figure 3.2 for sample locations.

The remaining majority of sample locations included under this AOI are primarily a result of conditions observed during Site demolition and the subsequent remedial actions conducted. Further details regarding sampling and remedial actions conducted during Site demolition are presented in a memorandum titled Summary of Sampling and Remedial Action Activities prepared by CRA and dated July 16, 2013.

3.8.1.3 Current Status and Recommendations

Based on the results of the investigations discussed above, no additional action related to this AOI is necessary.

3.8.2 AOI 4.2: Historical Operations – Western Parcel

3.8.2.1 Historical Operations

The property to the west of the main manufacturing property along Clay Avenue SW was historically utilized for agricultural purposes and for water supply wells, a softener plant, and a chlorinator building. A 1957 drawing and 1960 aerial photograph identify the presence of small structures located on this property. The 1957 drawing identifies Well Nos. 11 to 16, a softener plant, and a chlorinator building on this property.

Based on the historic use of the western portion of the Site as cultivated farmland, agricultural chemicals such as pesticides, herbicides and fertilizer would have historically been used on the Site. Information regarding historic use, storage or application rates was not available. If the chemicals were applied in accordance with manufacturer recommendations, residuals remaining in Site soils would be expected to be similar to other area properties. Application of agricultural chemicals for intended use is not considered a release.

3.8.2.2 Previous Investigations and Remedial Actions

The site was investigated during the 2011 Stage II Site-Wide Investigation. The property was purchased by Kendall Electric, Inc. in 2014 and a NFA Report was prepared by CRA and submitted to the MDEQ in 2014. Details of the investigation results are presented in the NFA Report discussed in Section 3.1.

3.8.2.3 Current Status and Conclusions

The NFA Report submitted to the MDEQ was approved in March 2015. The Site has been redeveloped by Kendall Electric, Inc. with the construction of a manufacturing facility. AOI 4.2 is located off-Site, accordingly, AOI 4.2 is not addressed as part of this NFA.

3.8.3 AOI 4.3: Historical Operations – Northern Parcel

3.8.3.1 Historical Operations

The properties to the north of 36th Street SW were historically utilized for residential, agricultural, and commercial purposes, including printing and body shops.

Based on the review of historical aerial photographs, city directories, topographic maps, and Site drawings, portions of the Site were historic residential and commercial properties. No information was available regarding the type of heating, underground storage tank (UST) or aboveground storage tank (AST) use, or the presence of septic systems, cesspools or water wells.

Based on the historic use of the northern portion of the Site as cultivated farmland, agricultural chemicals such as pesticides, herbicides and fertilizer would have historically been used on the Site. Information regarding historic use, storage or application rates was not available. If the chemicals were applied in accordance with manufacturer recommendations, residuals remaining in Site soils would be expected to be similar to other area properties. Application of agricultural chemicals for intended use is not considered a release.

Based on the review of available city directories, the property at 333 36th Street SW was listed as Helmus Garage & Body Shop in the 1948, 1953, 1957, 1961, and 1966 city directories and the property at 229 36th Street SW was listed as Raenell Press (printers) in the 1971 and 1975 city directories. No specific documentation was available regarding chemicals used, chemical storage locations, or historic disposal practices during the timeframe this property was utilized for vehicle repair or printing activities. Facilities like these typically may have used chlorinated solvents, heavy metals, inks, and petroleum products.

3.8.3.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB43-11 was advanced in the southern portion of the former employee parking lot on the north side of 36th Street. Three soil samples were collected from SB43-11 (0.5 to 2.5 feet bgs, 6 to 8 feet bgs, and 13 to 15 feet bgs). The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in table 3.8.3. Refer to Figure 3.2 for sample locations.

3.8.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.9 AOI 5: Release from Press HS-5

3.9.1 Historical Operations

Contamination from a release of water soluble oil from a press pit pan (HS-5 Press, which was identified to be near Press Z-1, in 15-Bay) was identified in soil and groundwater at the Site in 1981.

3.9.2 Previous Investigations and Remedial Actions

The release was investigated in 1981 and 1982, with soil and groundwater samples collected in this area. Black stained soil was observed during the sample collection. Soil and groundwater samples collected during the investigation were analyzed for grease and oil, total organic carbon (TOC), and chlorinated paraffin. The results of the sample analyses indicated detections of grease and oil, TOC, and chlorinated paraffin in multiple locations. Environmental Data, Inc. (EDI) concluded that the no substantial impact on groundwater quality was present as a result of the investigation. EDI recommended an additional groundwater sample be collected for analysis of U.S. EPA Priority Pollutants (a list of select SVOCs). No compounds from the Priority Pollutants list were detected in the additional groundwater sample. Based on analytical results from soil and groundwater samples collected in the vicinity of the release and a review of the Material Safety Data Sheet (MSDS) for the oil, EDI concluded that no chemicals of concern were detected in the soil or groundwater samples above the applicable regulatory limits at the time the samples were collected. There are currently no established Part 201 criteria for grease and oil, TOC, or chlorinated parrafins to allow for comparison of the historical sample results.

3.9.3 Current Status and Conclusions

Based on the results of the investigation conducted by EDI and groundwater data collected to-date from monitoring wells installed near this AOI, no additional action related to this AOI is necessary.

3.10 AOI 6: LNAPL and SVOC-impacted Groundwater

The LNAPL historically present on the Site is evaluated in detail in the LNAPL Conceptual Site Model (LCSM) memorandum presented in Appendix B. A brief summary of this AOI is presented below.

3.10.1 Historical Operations

An area in the northeastern portion of the Site was excavated during plant modernization activities in June 1985. The excavation was approximately 20 feet in depth, and was located near Column A-15 of the plant. Soil was removed in particular areas to the water table, where LNAPL was observed. The LNAPL was believed to consist of mineral seal oil and/or mineral spirits, which were used in processes in this portion of the plant for approximately 50 years. According to Site records reviewed, a release was reported to the National Response Center and the MDNR on July 26, 1985.

3.10.2 Previous Investigations and Remedial Actions

Based on the visual and olfactory presence of contamination in the excavation, a hydrogeological investigation (HI) was undertaken by EDI to determine the extent of the oil contamination. A total of seven monitoring wells, were installed during the HI; four of the wells were installed around the excavation, in the northeastern portion of the plant, and three wells were installed outside the plant on the north, northwest, and west sides of the plant. LNAPL was identified in monitoring wells located in the northeast portion of the plant. Subsequent investigations continued to monitor on a regular basis for the presence of LNAPL in select monitoring wells and groundwater samples were analyzed for SVOCs, with exceedances of the Part 201 Criteria exhibited in the groundwater samples. LNAPL was observed on a periodic basis in monitoring wells 85-5B and 85-3.

During demolition activities in 2011, the basement to the northwest of this area was flooded and oil sheen was observed on top of the water. Additionally, during demolition of the former basement foundation walls in 2012 near Column A-16 to A-18, oil globules were observed on the surface of the water table and near Column A-21, a mineral spirits-type odor was noted. During the 2012 Site-wide Investigation three monitoring wells (MW50-12 through MW52-12) were installed in these areas with screens that straddle the water table to monitor for LNAPL. Petroleum odor was noted in soil cuttings during monitoring well installation. A measurable amount of LNAPL has not been detected in monitoring wells in this area during recent monitoring events; however, sheen has occasionally been noted on sample purge water and occasionally in some locations a weathered petroleum or mineral spirits odor is evident in the purge water.

Based on historical stamping operations in the area of AOI 6 and previous sample results from MW44-12 identifying detections of 1,1,1-TCA below Part 201 GRCC, groundwater samples were collected from monitoring well MW44-12 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.10.3 Current Status and Conclusions

Based on the information presented in the LCSM memorandum, no additional action related to this AOI is necessary.

3.11 AOI 7: Former Metal Finishing Operations

Based on the review of available information, metal finishing operations, including metal preparation, chromium plating, and various coating operations, were conducted at the Site.

3.11.1 AOI 7.1 – Bonderizing Operations

3.11.1.1 Historical Operations

A bonderizing/prime system was identified on a 1951 drawing between Columns U and W, Rows 42 to 46. This system included an alkali rinse, hot rinse, bonderite (a phosphate surface coating), cold rinse, and chromic acid dip tanks, a blow off oven, a prime spray booth, a final spray booth, and a final oven. The drawing also identified floor drains and a sludge tank in this area.

3.11.1.2 Previous Investigations and Remedial Actions

SB45-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 18 to 20 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.1. Refer to Figure 3.2 for sample locations.

Based on the historical metal surface coating operations of AOI 7.1, groundwater samples were collected from monitoring wells MW32-12, MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of Perfluorinated Chemicals (PFCs), including Perfluorooctanoic Acid (PFOA) and Perfluorooctane Sulfonate (PFOS). The results did not indicate an exceedance of the MDEQ developed Residential and Nonresidential DWC for PFOA and PFOS that took effect on January 10, 2018. A summary of the sampling is presented in Appendix E.

3.11.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.2 AOI 7.2 – Lacquer and Cement Spray

3.11.2.1 Historical Operations

Lacquer and cement spray booth operations were identified on a 1939 drawing to have been historically conducted on instrument panels from Columns O to Q, Row 39 to 42. Site personnel also indicated that this area was historically utilized for zinc prime operations in subsequent years. No further information regarding these operations was available.

3.11.2.2 Previous Investigations and Remedial Actions

SB46-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 19 to 21 ft bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.2. Refer to Figure 3.2 for sample locations.

3.11.2.3 Current Status and Recommendations

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.3 AOI 7.3 – Anti-rust Spray Booth No. 1

3.11.3.1 Historical Operations

Anti-rust oil spray booth No. 1 operations, which included approximately 110-gallon oil tanks situated on the plant floor or in below grade pits, were identified on a 1937 drawing to have been historically conducted at Columns U to X, Row 16. No further information regarding these operations was available. The anti-rust spray booth operations utilize petroleum products. Based on the nature of the chemicals utilized and the operational timeframe, the former anti-rust spray booth operations were considered an AOI.

3.11.3.2 Previous Investigations and Remedial Actions

SB47-11 was advanced in this area during the 2011 Site-Wide Investigation – Stage I; however, refusal was encountered at 4.5 feet bgs. Based on the review of historical drawings and noted depths of the pits, the boring was possibly installed within a former pit. To further evaluate this area, SB263-13 was advanced approximately 20 feet to the north of SB47-11, which was estimated to be outside of the former pit, and two soil samples were collected, one from the interval below the assumed bottom of the former pit presented on historical drawings and one from immediately above the water table and submitted for laboratory analysis of TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.3. Refer to Figure 3.2 for sample locations.

3.11.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.4 AOI 7.4 – Anti-rust Spray Booth No. 2

3.11.4.1 Historical Operations

Anti-rust oil spray booth No. 2 operations, which included approximately 110-gallon oil tanks situated on the plant floor or in below grade pits, were identified on a 1937 drawing to have been historically conducted at Columns O to R, Row 13. Site personnel also indicated that the general Booth #2 area was historically utilized for zinc prime operations in subsequent years. No further information regarding these operations was available.

3.11.4.2 Previous Investigations and Remedial Actions

SB48-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 20 to 22 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.4. Refer to Figure 3.2 for sample locations.

3.11.4.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.5 AOI 7.5 – Anti-rust Spray Booth No. 3

3.11.5.1 Historical Operations

Anti-rust oil spray booth No. 3 operations, which included approximately 110-gallon oil tanks situated on the plant floor or in below grade pits, were identified on a 1937 drawing to have been historically conducted at Columns U to X, Row 7. Site personnel also indicated that the general Booth #3 areas were historically utilized for zinc prime operations in subsequent years. No further information regarding these operations was available.

3.11.5.2 Previous Investigations and Remedial Actions

SB49-11 was advanced in this area during the initial Site-Wide Investigation. A soil sample was collected from 20 to 22 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.5. Refer to Figure 3.2 for sample locations.

3.11.5.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.6 AOI 7.6 – Anti-rust Spray Booth No. 4

3.11.6.1 Historical Operations

Anti-rust oil spray booth No. 4 operations, which included approximately 110-gallon oil tanks situated on the plant floor or in below grade pits, were identified on a 1937 drawing to have been historically conducted at Columns Q to T, Row 4. No further information regarding these operations was available.

3.11.6.2 Previous Investigations and Remedial Actions

SB50-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 20 to 22 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.6. Refer to Figure 3.2 for sample locations.

3.11.6.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.7 AOI 7.7 – Former West Paint Booth

3.11.7.1 Historical Operations

A waterfall type (i.e., wet) paint booth with below grade water tanks and sump pits was historically located at the Site at Columns P to Q, Rows 24 to 25. The paint booth is identified as "gun carriage" on a drawing circa 1942. No further information was available regarding this paint booth. No information was identified regarding the duration this unit operated or a release from the system. Painting operations typically utilize solvent and metal based chemicals.

3.11.7.2 Previous Investigations and Remedial Actions

SB51-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 19 to 21 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.7. Refer to Figure 3.2 for sample locations.

3.11.7.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.8 AOI 7.8 – Former Paint Booth (Current Steam Clean Booth)

3.11.8.1 Historical Operations

The current steam clean booth located at Column N, Row 47, was reportedly historically used as a wet paint booth. No information was identified regarding the duration this unit operated or a release from the system. Painting operations typically utilize solvent and metal based chemicals.

3.11.8.2 Previous Investigations and Remedial Actions

SB52-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 17 to 19 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.8. Refer to Figure 3.2 for sample locations.

3.11.8.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.11.9 AOI 7.9 – Former East Paint Booth

3.11.9.1 Historical Operations

A waterfall type (i.e., wet) paint booth with below grade water tanks and sump pits was reportedly historically located at the Site at Column O to N, Rows 26 to 28. No further information was available regarding this paint booth. No information was identified regarding the duration this unit operated or a release from the system. Painting operations typically utilize solvent and metal based chemicals.

3.11.9.2 Previous Investigations and Remedial Actions

SB53-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 20 to 22 feet bgs and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.11.9. Refer to Figure 3.2 for sample locations.

3.11.9.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.12 AOI 8.0 – Underground Storage Tanks (USTs)

According to Site personnel and based on the review of available information, numerous USTs have historically existed and currently exist at the Site. USTs present a potential for a release to the environment if the integrity of the USTs and/or associated piping was compromised while the USTs were/are in use. Each of the Site's former and current USTs are therefore considered an AOI. The USTs that relate to specific buildings or operations are discussed with the respective AOI. The remaining USTs are discussed below.

3.12.1 AOI 8.1 – Mineral Spirits and Mineral Seal Oil USTs

3.12.1.1 Historical Operations

Based on the review of available documentation from 1981, the Site historically utilized mineral spirits to dilute mineral seal oil that was used in operations. The mineral spirits and mineral oil were stored in four USTs (one mineral spirits UST and three mineral seal oil USTs) located to the south of Row 51 between Columns R and S. Based on the review of an air emissions permit application for the mineral spirits UST, the capacity of the mineral spirits UST was approximately 7,800 gallons. The capacities of the mineral seal oil USTs were not identified; however, drawings of the tanks depict the three mineral seal oil USTs to be similar in size to the mineral spirits UST. According to review of the Environmental Impairment Liability Questionnaire dated October 13, 1982, mineral seal oil and mineral spirits were stored in USTs at that time.

Review of a MDNR Notification for USTs, dated April 24, 1986, identified four 8,000-gallon fiberglass USTs were present at the Site at that time, containing mineral seal oil, mineral spirits, machine oil, and hydraulic oil (Tank Nos. 1 through 4, respectively). The UST database identified four removed USTs (Tank Nos. 1 through 4) associated with the Site, including two 8,000-gallon hazardous substance USTs (Tank Nos. 1 and 2), one 8,000-gallon machine oil UST (Tank No. 3), and one 8,000-gallon hydraulic oil UST (Tank No. 4). Additionally, a drawing available from the City of Wyoming Fire Department depicted four 8,000-gallon fiberglass fuel oil USTs to the south of the Main Manufacturing Building (at that time), east of former Railroad Track No. 5, northeast of the Primary Switch House, and west of the cooling towers. These USTs appear to be in the same general location as the aforementioned USTs. Based on the review of the environmental database search results, four 8,000 gallon USTs were removed on January 1, 1986 (Tank Nos. 1, 2 and 4) and January 1, 1987 (Tank No. 3), which is inconsistent with the MDNR Notification for USTs form discussed above, which indicated that the four tanks were present on April 24, 1986.

No further information regarding the 8,000-gallon mineral spirits/mineral seal oil USTs was available.

3.12.1.2 Previous Investigations and Remedial Actions

During the initial Site-wide Investigation, two soil borings were advanced to investigate the former USTs. SB54-11 was advanced in this area and two soil samples were collected from 2 to 4 feet bgs and 17 to 19 feet bgs. SB55-11 was advanced to the northeast of SB54-11 and two soil samples were collected from 2 to 4 feet bgs and 15 to 17 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and PCBs. The soil sample analytical results

did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.12.1. Refer to Figure 3.2 for sample locations.

3.12.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.12.2 AOI 8.2 – Former Gasoline and Diesel USTs

3.12.2.1 Historical Operations

One 3,000 gallon diesel and one 8,000 gasoline UST were present at the Site. The USTs were reportedly installed on April 24, 1985 and are made of cathodically protected double walled steel, with fiberglass reinforced double walled plastic piping. The USTs were equipped with automatic tank gauging and interstitial monitoring for leak detection. Based on leak detection readings, a potential leak from the 8,000 gallon gasoline UST was reported to the MDEQ on April 27, 2006 (Incident No. S-0101-06). Information reviewed at the Site indicated that the leak detection reading resulted from a faulty sensor board that needed replacement. The Site was not listed in the LUST Database for this incident, as it was only a "suspected" release (i.e., S-XXXX-XX) and not a "confirmed" release (i.e., C-XXXX-XX).

3.12.2.2 Previous Investigations and Remedial Actions

Testing of Gasoline and Diesel Fuel Underground Tanks forms completed on 12 occasions between 1991 and 1998 were available for review on Site. According to the information reviewed, the items tested during each event included monitor well N.E., monitor well N.W., monitor well S.E., monitor well S.W., gasoline containment vessel, diesel containment vessel, catch basin (reportedly 12 feet deep), and pollution alert electrical system. No significant issues associated with these items were identified during the inspections. According to on Site records reviewed, the gasoline and diesel fuel USTs were equipped with leak detection equipment. Daily leak detection printouts dated between 1996 and 2001 were available for review and identified changes in fluid levels as "LD Failed", indicating the potential failure of the leak detection. CRA identified 32 potential leaks from the gasoline UST ranging from 0.10 and 4.61 gallons per hour (gal/hr) and eight possible leaks from the diesel UST ranging from 0.12 and 3.02 gal/hr from review of the leak detection printouts.

Both tanks were removed in November 2011 by SME in support of ongoing redevelopment activities. A confirmed release was reported to the MDEQ by SME after a floor sample taken under the 3,000-gallon diesel tank exhibited a concentration of naphthalene greater than GSIPC. CRA conducted a soil and groundwater investigation of the former UST. Closure of the confirmed release was completed in 2012 and the details of the investigation are presented in the Closure Report submitted to the MDEQ LUST Division in October 2012.

3.12.2.3 Current Status and Conclusions

Closure of the confirmed release was completed in 2012; therefore, no additional action related to this AOI is necessary.

3.12.3 AOI 8.3 – Former Heating Oil and Oil USTs

3.12.3.1 Historical Operations

Three 50,000-gallon fuel oil tanks for boiler backup for the current Power House were installed in 1970 to the north of the east cooling tower.

3.12.3.2 Previous Investigations and Remedial Actions

According to records reviewed, the three 50,000-gallon USTs were removed from the Site on August 21, 1985. The UST removal was overseen by the Fire Department and according to the inspection report, two of the USTs contained "oil" and one contained fuel oil. The USTs were reportedly cleaned by Great Lakes Tank Cleaning Company and removed and disposed off-Site by Hardman Construction Company. Photographs of the UST removal included in the Fire Department file for the Site were reviewed by CRA. None of the photographs available for review indicated a release from the USTs and the USTs appeared to be in good condition at the time of removal. However, no verification soil samples were collected at the time of the tank removal.

During the initial Site-wide Investigation, two soil borings were advanced to investigate the former USTs. SB57-11 was advanced in this area and two soil samples were collected from 1 to 3 feet bgs and 16.5 to 18.5 feet bgs. SB58-11 was also advanced in this area and two soil samples were collected from 1 to 3 feet bgs and 16.5 to 18.5 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB57-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample analytical results exhibited a concentration of PCE exceeding Residential and Nonresidential DWC. Soil sample and temporary monitoring well sample analytical results compared to Part 201 Criteria are presented in Table 3.12.3. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.12.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.12.4 AOI 8.4 – Former 5,000-Gallon and 8,000-Gallon Gasoline USTs

3.12.4.1 Historical Operations

One 5,000-gallon gasoline UST was inspected by the Fire Department on September 19, 1985 during removal. Based on the review of available Fire Department records, the 5,000-gallon gasoline UST was located to the south of the plant, east of Railroad Track No. 5, and west of the cooling towers. No information was available regarding the age or construction of the former UST.

An 8,000-gallon gasoline UST and associated dispenser are identified in the same general area on a February 1985 drawing from the Site. It could not be confirmed if these were the same tanks, with

an incorrect volume listed on the drawing or if one was a replacement for the other, from the available documentation.

3.12.4.2 Previous Investigations and Remedial Actions

According to the inspection report, the 5,000-gallon UST was removed by Bosch Mechanical and Riverside Gravel Co., cleaned, and disposed of off-Site. Based on review of the inspection report, no evidence or indication of a release was observed at the time of removal. No verification soil samples were collected at the time of the tank removal.

During the 2012 Site-wide Investigation, one soil borings was advanced to investigate the former USTs. SB190-12 was advanced in this area and two soil samples were collected from 0 to 2 feet bgs and 14 to 16 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB190-12 through the borehole drill rods utilizing a stainless steel screen and expendable screen point and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals (dissolved). The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample collected exhibited a concentration of manganese exceeding the Part 201 aesthetic-based Residential and Nonresidential DWC. Soil sample and temporary monitoring well analytical results compared to Part 201 Criteria are presented in Table 3.12.4. Temporary monitoring well sample results are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.12.4.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.12.5 AOI 8.5 – Former 1,000-Gallon Gasoline UST No. 1

3.12.5.1 Historical Operations

Based on the review of a 1951 drawing, a 1,000-gallon gasoline UST (Tank No. 1) and pump were identified south of Row 35 (no Column available), and just south of the outside of the 1950 addition on the eastern side of the Main Manufacturing Building. On a 1955 drawing, a "gas tank and pump" (Tank No. 2) were identified as being relocated. There are no Columns or Rows identified on the drawing; however, the tank is shown to the north of the former Heat Treat Building and to the west of the former Baler House. No further details were identified on the drawing. It could not be confirmed that the 1,000-gallon UST identified on the 1951 drawing (after the 1950 addition) was relocated to the south after the 1954 addition in this area.

3.12.5.2 Previous Investigations and Remedial Actions

During the initial Site-wide Investigation, one soil boring was advanced to investigate the former UST. SB61-11 was advanced in this area and two soil samples were collected from 1 to 3 feet bgs and 18 to 20 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB61-11 after installation of a 1-inch PVC screen and riser and submitted to the analytical

laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample analytical results did not indicate any exceedance of Part 201 criteria. Soil sample and temporary monitoring well analytical results compared to Part 201 Criteria are presented in Table 3.12.5. Temporary monitoring well sample results are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

The concentration of PCBs detected in the shallow soil sample exceeded the TSCA High Occupancy Criteria of 1 ppm total PCBs. Issues related to the unknown source of PCB contamination investigation and remediation are discussed further under AOIs 39.1 and 39.2.

3.12.5.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.12.6 AOI 8.6 – Former 1,000-Gallon Gasoline UST No. 2

3.12.6.1 Historical Operations

Based on the review of a 1951 drawing, a 1,000-gallon gasoline UST (Tank No. 1) and pump were identified south of Row 35 (no Column available), and just south of the outside of the 1950 addition on the eastern side of the Main Manufacturing Building. On a 1955 drawing, a "gas tank and pump" (Tank No. 2) were identified as being relocated. There are no Columns or Rows identified on the drawing; however, the tank is shown to the north of the former Heat Treat Building and to the west of the former Baler House. No further details were identified on the drawing. It could not be confirmed that the 1,000-gallon UST identified on the 1951 drawing (after the 1950 addition) was relocated to the south after the 1954 addition in this area.

3.12.6.2 Previous Investigations and Remedial Actions

During the initial Site-wide Investigation, one soil borings was advanced to investigate the former UST. SB77-11 was advanced in this area and two soil samples were collected from 1 to 3 feet bgs and 18 to 20 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. The analytical results from the sample collected from 1 to 3 feet bgs exhibited a concentration of benzo(a)pyrene exceeding Nonresidential DCC; therefore, remediation of this area was required. Additional delineation soil borings were installed during Stage II of the 2011 Site-wide Investigation and remediation of this area was completed during 2012 through soil excavation and off-Site disposal. Details of the delineation sampling, excavation, and verification sampling were included in a memorandum titled Summary of Sampling and Remedial Action Activities discussed in Section 3.1. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.12.6. Refer to Figure 3.2 for sample locations.

3.12.6.3 Current Status and Conclusions

Based on the results of the investigation and remedial action conducted, no additional action related to this AOI is necessary.

3.12.7 AOI 8.7 – Potential UST (near Column O, Row 45)

3.12.7.1 Historical Operations

During the private utility locate, utilizing ground-penetrating radar, conducted as part of the implementation of the Site-Wide Investigation, a potential UST was identified near Column O, Row 45 (AOI 8.7). No further information regarding the tank was available, including age, construction, contents, etc.

3.12.7.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation, SB60-11 was advanced near the potential UST and soil samples were collected from 1 to 3 feet bgs and 18 to 20 feet bgs. The samples were submitted to the analytical laboratory and analyzed for TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. A groundwater sample was also collected from SB60-11 after installation of a 1-inch PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). Manganese was detected in the groundwater sample at a concentration exceeding the aesthetic-based Residential and Nonresidential DWC. Soil and temporary monitoring well sample analytical results compared to Part 201 Criteria are presented in Table 3.12.7. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2.

3.12.7.3 Current Status and Conclusions

Based on the results of the investigation discussed above and the fact that during demolition and re-grading activities in this area no tanks were identified, no additional action related to this AOI is necessary.

3.13 AOI 9 – Former Wastewater Treatment Plant (WWTP)

3.13.1 Historical Operations

The WWTP was constructed in 1970 for the pretreatment of process wastewater from the Site prior to discharge to the City of Wyoming municipal sanitary sewer system. The WWTP was constructed to pre-treat process wastewater discharged from the metal finishing, heat treat, battery charge, steam clean, press pit, and elevator pit areas, where chemicals such as petroleum products, solvents, and acids would have been utilized. The 100,000-gallon single-walled steel used oil AST located outside the WWTP to the east was noted on Site drawings to have been constructed on an oily sand cushion. Additional ASTs at the WWTP include: two 45,000-gallon steel oily wastewater batch tanks located outside the building; one 2,200-gallon single-walled steel oil/water separator AST inside the building; one 3,000 gallon single-walled steel scum holding AST inside the building; two 6,000 gallon single-walled steel used oil ASTs located outside the building between the batch tanks and the 100,000-gallon used oil AST; one 5,000-gallon single-walled steel oily WWTP sludge AST inside the building; and four ASTs of unknown capacity containing wastewater treatment chemicals including caustic, flocculant, and coagulant.

3.13.2 Previous Investigations and Remedial Actions

Significant staining was noted on the interior of the building and sumps inside the building, and adjacent to a sump near the 6,000 gallon used oil ASTs during the site inspection.

During the initial Site-Wide Investigation four soil borings (SB62-11 through SB65-11) were advanced in this area. Soil samples were collected from immediately below the ground surface and directly above the groundwater table. Soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB64-11 after installation of a 1-inch PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved).

During a Facility Environmental Assessment (FEA) conducted by CRA in 2010, a concrete core sample was collected adjacent to a sludge pit in the former WWTP. Based on the analytical results from the concrete core sample, PCBs were detected at a concentration of 6.6 mg/kg. Based on the detection of PCBs, the floor slab of the former WWTP was removed during demolition activities under an approved Self Implementing Plan (SIP) by MCM Management Corp. (MCM). Subsequent to the removal of the former WWTP building slab, a hand auger soil boring (SB188 12) was advanced on May 23, 2012 to 4 ft bgs beneath the former concrete that was identified to be impacted. Soil samples were collected from 0 to 2 ft and 2 to 4 ft bgs to evaluate potential impacts. The soil samples were submitted to the analytical laboratory for analysis of PCBs. Based on the analytical results, PCBs were not detected in the soil samples above 1 ppm.

Additional investigation of the WWTP was conducted in 2012 after completion of demolition. Four soil borings (SB191-12 through SB194-12) were advanced adjacent to the former fuel oil tank, former wastewater process tanks, and the former WWTP building. Two samples were collected from each boring; one from immediately below the ground surface and one directly above the water table. Samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB192-12 and SB194-12 through the borehole drill rods utilizing a stainless steel screen and expendable screen point and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals (dissolved).

The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Manganese was detected in both groundwater samples at a concentration exceeding the aesthetic-based Residential and Nonresidential DWC. Soil sample and temporary monitoring well analytical results compared to Part 201 Criteria are presented in Table 3.13. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.13.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.14 AOI 10 – Power House Operations

3.14.1 AOI 10.1 - Former Power House (most recent)

3.14.1.1 Historical Operations

The most recent Former Power House was constructed at the Site in 1970 and was located to the south of the former Main Manufacturing Building and adjacent to the east of the former Baler House. The Power House provided building heat and steam to the Site. The Power House was a multiple story building with a basement and included three natural gas fired boilers, which had the ability to burn waste oil, No. 2 oil, or No. 6 oil. A below grade brine pit was present outside to the north of the Power House and to the south of the cooling water towers and pumps. No information was available regarding the construction details of the brine pit. A 500-gallon diesel AST was also present within the Power House.

The Power House was demolished during 2012, along with all other associated and nearby structures. However, the basement foundation floor and walls, as well as other below grade structural concrete that was located more than 4 feet below the proposed final grade was left in place.

3.14.1.2 Previous Investigations and Remedial Actions

During Stage II of the Site-Wide Investigation SB136-11 was advanced near the below grade brine pit. Soil samples were collected from 0.5 to 2.5 ft bgs and 15 to 17 ft bgs from SB136-11 and submitted to the analytical laboratory for analysis of sodium and chloride.

During the 2012 Site-Wide Investigation two soil borings (SB195-12 and SB196-12) were advanced in the footprint of the former Power House. Two soil samples were collected from each boring from 0 to 2 ft bgs and 11 to 13 ft bgs and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB195-12 through the borehole drill rods utilizing a stainless steel screen and expendable screen point and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals (dissolved). As presented in the stratigraphic boring log for SB195-12, concrete foundation was encountered at 9 ft bgs that was one foot in thickness. An additional layer of concrete was discovered at 11 ft bgs that was also one foot in thickness. The deep soil sample was collected below this additional concrete foundation. The soil sample collected from SB195-12 at 11 to 13 ft bgs exhibited concentrations of various PAHs that exceeded residential and Nonresidential DCC.

In an effort to delineate the Nonresidential DCC exceedance identified in SB195-12, four additional soil borings (SB222-13 and SB274-13 through SB 276-13) were advanced around the former power house and a soil sample was collected from each at approximately the same depth as the Nonresidential DCC exceedance present in SB195-12. None of the samples analyzed from these additional borings exhibited concentrations of PAHs exceeding the Nonresidential DCC. Soil sample and temporary monitoring well analytical results compared to Part 201 Criteria are presented in Table 3.14.1. Temporary monitoring well sample analytical results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.3 for this sample location.

3.14.1.3 Current Status and Conclusions

The concentration of benzo(a)pyrene detected in SB195-12 exceeds the Nonresidential DCC. The horizontal and vertical extent of PAH contamination below the former power house basement has been delineated. The sample location information for SB195-12 is included in the RC. Therefore, no additional action related to this AOI is necessary.

3.14.2 AOI 10.2 - Former Power House

3.14.2.1 Historical Operations

A coal fired Power House was constructed at the Site during the initial development of the property by GMC in 1936 and was operated until 1970/71 when the most recent Power House was brought online. The former Power House was located to the west of the Main Manufacturing Building, adjacent to Column ZZ, Rows 19 and 24, and included an ash silo, skip pit and coal hopper, and Power House Building. Coal was stored outside, adjacent to the south of the former Power House, between Rows 24 and 33, in an area approximately 220 feet by 350 feet in area. Demolition plans for the former Power House indicated that the structural components, with the exception of the western wall of the building, were to be removed to the basement (or lowest floor) slab, with the concrete cracked to allow for infiltration. The former Power House utilized a four inch drain tile around the perimeter of the building, as well as numerous crocks, floor drains, sumps, and catch basins throughout the structure.

A below grade tunnel, located between Columns ZZ to W, Rows 22 1/2 and 22, was also reportedly removed, with the exception of the concrete floor that was cracked, to the western edge of the Main Manufacturing Building. Demolition plan drawings did not indicate whether or not abandonment/demolition activities were proposed for the portion of the tunnel that was present beneath the Main Manufacturing Building. This area is currently beneath the Main Manufacturing Building.

3.14.2.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation three soil borings (SB66-11 through SB68-11) were advanced in the vicinity of the former power house. A shallow soil sample (1 to 3 ft bgs) was collected from each soil boring. A soil sample was also collected from immediately above the water table from SB67-11 at 20 to 22 ft bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCS, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB67-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs and TCL SVOCs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample analytical results did not indicate any exceedance of Part 201 criteria. Temporary monitoring well sample results are presented in Table 3.2. Refer to Figure 3.2 for sample locations. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.14.2.

3.14.2.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.15 AOI 11 - Former AOF House

3.15.1 Historical Operations

An Acetylene, Oxygen, and Ferrolene (AOF) House was historically present to the west of the Main Manufacturing Building at Column ZZ, Rows 18 to 15. Acetylene, oxygen, and ferrolene were welding and cutting gasses utilized throughout the facilities for metal fabrication. Acetylene and ferrolene were fuel gasses that were combusted with oxygen to produce a high temperature flame. The AOF House was constructed circa 1936 and was demolished circa 1970. Available drawings indicate that the AOF originally included use of a 12,000 gallon UST containing oleum spirits; however, notes on the drawings indicated that the tank was never installed. Additionally, a 420-gallon ferrolene UST was present to the south of the AOF House. The AOF House consisted of the ferrolene room (including cyanide and lead pots), a pump room, the oxygen manifold and storage room, the carbide storage room, the acetylene storage room, the acetylene generator room, a loading platform serviced by a railroad siding, and sludge pits. Additional information regarding the chemicals utilized during the operation of the AOF House was not available.

3.15.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation two soil borings (SB69-11 and SB70-11) were advanced in this area. Two soil samples were collected from each boring at 1 to 3 ft bgs and 20 to 22 ft bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.15.

3.15.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.16 AOI 12 - Former Cooling Tower Basin

3.16.1 Historical Operations

A cooling tower and cooling tower basin are identified on a 19 drawing to the west of the former Power House, to the north of the 500,000 gallon fire suppression water AST and associated pump house, and to the south of the former 250,000 gallon elevated fire suppression water AST, in line with Rows 19 to 22 for the Main Manufacturing Building. No further information regarding the operation and construction of the cooling water tower and basin was available, including information regarding water treatment chemicals utilized, process associated with the generation point of water

cooled or sludge removal practices. The majority of cooling water systems operated during this timeframe used chromium as a biocide. This area is currently paved with concrete and/or asphalt.

3.16.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB71-11 was advanced in this area. Two soil samples were collected from 0.5 to 2.5 ft bgs and 15 to 17 ft bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB71-11 after the installation of a 1-inch diameter PVC screen and rise and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample results did not indicate any exceedance of Part 201 Criteria. Soil sample and temporary monitoring well analytical results compared to Part 201 Criteria are presented in Table 3.16. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.16.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.17 AOI 13 - Former Cooling Water Spray Pond

3.17.1 Historical Operations

A cooling water spray pond was historically located to the west of the former Power House, between Rows 13 and 18 1/2. The cooling water spray pond received process wastewater from air compressor blowdown and welding machine cooling water and discharged cooled water via return lines to the plant and to the storm sewer. Historical documentation indicates that silver, lead, and copper were historically utilized during welding operations. No information was available regarding the potential use of algaecides/biocides, nor was information related to removal of sludges from the cooling water spray pond.

3.17.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB72-11 was advanced in this area. Two soil samples were collected from 0.5 to 2.5 ft bgs and 13 to 15 ft bgs. No visual indication of impact or PID screening results were present that would have indicated a release. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.17.

3.17.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.18 AOI 14 - Former Sludge Bed

3.18.1 Historical Operations

A "present sludge bed to be filled in" was identified on a 1954/1955 drawing of the Site. Based on the review of available aerial photographs, this sludge bed was located to the north of the former Power House, to the northwest of the former AOF Building, and to the east of the cooling water spray pond. The area was not observed to be utilized as a sludge bed in the 1938 or 1960 aerial photographs; however, an undated aerial obtained from the Site that appears to be from prior to 1954 (based on facility construction) shows this area. This area is under a portion of the former Main Manufacturing Building. No information was available regarding the nature of the sludges or whether they were deposited in this area.

3.18.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation two soil borings (SB73-11 and SB74-11) were advanced in this area. Three soil samples were collected from SB73-11 at 1 to 3 ft bgs, 12 to 14 ft bgs, and 20 to 22 ft bgs. Two soil samples were collected from SB74-11 at 1 to 3 ft bgs and 12 to 14 ft bgs. The soil samples collected from 12 to 14 ft bgs interval in both borings were described as a sludge-like material. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. However, the results of the VOC analysis were all rejected following data validation due to matrix interference issues.

In an effort to obtain valid VOC results, SB254-13 was advanced adjacent to SB73-11 during the 2013 Site-Wide Investigation. Soil samples were collected from the same sludge-like material discovered at 9 to 9.75 ft bgs and 9.75 to 11 ft bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs and TCL SVOCs. A groundwater sample was also collected from SB254-13 after installation of a 1-inch PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample results did not indicate any exceedances of Part 201 Criteria. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.18. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.18.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.19 AOI 15 – Baler Operations

3.19.1 AOI 15.1 – Former Main Manufacturing Building Balers

3.19.1.1 Historical Operations

An area with two balers is identified on 1936 and 1950 drawings between Columns Q to O, Rows 20 1/2 to 22. No further information was available regarding the timeframe that this area was operated for baling operations or the specific building structures used. Based on the nature of the operations conducted, the types of chemicals typically utilized during these operations, the potential use/presence of below grade pits, the timeframe these operations occurred, and the potential to impact the subsurface, the former Main Manufacturing Building balers were considered an AOI.

3.19.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB75-11 was advanced in this area. A soil sample was collected from 1 to 3 ft bgs for analysis of TCL VOCs, PAHs, Site-specific TAL metals, and PCBs; however, refusal was encountered at 6 ft bgs due to the presence of concrete. It is possible that SB75-11 was installed within the former baler pit. Based on the review of historical drawings and noted dimensions of the baler pits, SB264-13 was advanced in the area of SB75-11 at a location believed to be outside the former pit, and two soil samples were collected, one from the interval below the anticipated bottom of the former pit (6 to 7 ft bgs) presented on historical drawings and one from immediately above the water table (20 to 22 ft bgs). The samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.19.1.

3.19.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.19.2 AOI 15.2 – Former Baler House

3.19.2.1 Historical Operations

A former Baler House was located between Columns C and H, Rows 42 to 44. Scrap metal was conveyed to the former Baler House via an underground conveyor system, which was located between Columns E and F. This Baler House was demolished during the 1964 expansion activities, with the current Baler House constructed in 1965. Based on the nature of the operations conducted, the types of chemicals typically utilized during these operations, the potential use/presence of below grade pits, the timeframe these operations occurred, and the potential to impact the subsurface, the former Baler House was considered an AOI.

3.19.2.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB76-11 was advanced in this area; however, refusal was encountered due to the thickness of concrete in this area. The presence of the subsurface basement in this area restricted access for sample collection in this AOI.

3.19.2.3 Current Status and Conclusions

Based on the location of the former Baler House over the basement of the more recent plant expansion, it is likely that all soil in this area was relocated during the construction of the basement. Therefore, no additional action related to this AOI is necessary.

3.19.3 AOI 15.3 – Former Baler House (most recent)

3.19.3.1 Historical Operations

A Baler House was located to the south of the Main Manufacturing Building, adjacent to the west of the Power House. The Baler House was constructed in 1965 and consisted of four balers for scrap metal processing, which were set in below grade concrete pits. Significant oil staining and scrap metal were observed in the visually accessible portions of the Baler House pits during the Site inspection. Additionally, a sump was located in the corner of the building, which discharged through below grade piping to the former WWTP. Based on the age of the pits, the types of chemicals typically utilized during these operations, the timeframe these operations occurred, and the potential to impact the subsurface, the Baler House pits were considered an AOI.

3.19.3.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB78-11 and SB79-11 were advanced near the baler house. Two soil samples were collected from SB78-11 at 1 to 3 ft bgs and 16 to 18 ft bgs. Two soil samples were collected from SB79-11 at 1 to 3 ft bgs and 16.5 to 18.5 ft bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The results did not indicate any exceedance of Part 201 Criteria; however, due to on-going demolition activities access was limited and additional soil borings could not be completed.

During the 2012 Stage III Site-Wide Investigation two soil borings were advanced inside of the former baler house footprint. Two soil samples were collected from SB197-12 at 0 to 2 feet bgs and 11 to 13 feet bgs. Two samples were also collected from SB198-12 at the same depths. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, Site-specific TAL metals, and PCBs. A groundwater sample was also collected from SB197-12 through the borehole drill rods utilizing a stainless steel screen and expendable screen point and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals (dissolved).

In support of redevelopment activities and on the behalf of the WBRA, SME completed investigation and delineation of the SVIAC exceedance present in the 11 to 13 feet bgs sample collected from SB197-12. Four soil borings were advanced in the former baler house. Soil boring SME SB197-12A was advanced in the original location of SB197-12; however, a sample could not be collected from the 11 to 13 feet bgs interval due to drilling difficulties encountered with a buried foundation above

the sample interval. Therefore, a sample was collected from 13 to 14 feet bgs in this location. Soil borings SME SB197-12A1 through SME SB197-12A3 were advanced around SB197-12 to delineate the impacts present in the 11 to 13 feet bgs interval. The soil samples were analyzed for TCE only. The results did not indicate any exceedances of the SVIAC.

The soil sample analytical results from all locations in this area did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.19.3. Temporary monitoring well sample analytical results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.19.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.20 AOI 16 – Former Heat Treat Operations

3.20.1 AOI 16.1 –Main Manufacturing Building – Area No. 1

3.20.1.1 Historical Operations

Heat treat operations were conducted in a variety of locations throughout the Site. A former Heat Treat Room was located near Column O, Row 4 on a 1936 drawing. This area was identified to consist of a "homo" furnace utilized to homogenize the gas mixture prior to heat treating, oven furnaces, lead and cyanide pots, quenching tanks, a caustic tank, and a forge. Floor drains, a pit and a trench were identified in this area. No further information was available regarding the timeframe that heat treat operations were conducted in this area.

3.20.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB80-11 was advanced in this area. Two soil samples were collected from 1 to 3 feet bgs and 20 to 22 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.20.1.

3.20.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.20.2 AOI 16.2 –Main Manufacturing Building – Area No. 2

3.20.2.1 Historical Operations

A former Heat Treat area was located between Columns U and W, Rows 26 and 27 on a 1944 drawing. This drawing identifies a large quench pit in this area, with four tanks shown in the pit and at least one 12,000-gallon oil tank.

3.20.2.2 Previous Investigations and Remedial Actions

SB81-11 was advanced in this area during the initial Site-Wide Investigation and a sample was collected from 2 to 3 feet bgs and analyzed for TCL VOCs, PAHs, Site-Specific TAL metals, and PCBs. No exceedances of Part 201 Criteria were present in the sample collected; however, refusal was encountered at approximately 9.8 feet bgs. A 1944 drawing indicates that the pit was designed to be 9.8 feet deep. It is likely that SB81-11 was installed within the former pit. A dark brown to black sand was also discovered at 9.0 feet bgs. To further evaluate this area, SB265-13 was advanced at a location believed to be outside of the former pit, and two soil samples were collected, one from the interval below the anticipated bottom of the former pit (5 to 6 feet bgs after taking into account the change in grade in this area following demolition and regrading activities completed in 2012) presented on historical drawings and one from immediately above the water table (14 to 15 feet bgs). An additional boring, SB266-13, was installed within the former pit to collect a sample of the dark brown to black sand interval encountered at 9.0 feet bgs. Samples collected from both borings were submitted for laboratory analysis of TCL VOCs, PAHs, PCBs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.20.2.

3.20.2.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.20.3 AOI 16.3 –Former Heat Treat Building No. 1

3.20.3.1 Historical Operations

A former Heat Treat Building was located between Columns J through M, Rows 29 to 30 1/2 on a 1945 drawing. This area was identified to consist of a sand blast room, gas crackers and furnaces and associated pits. No further information was available regarding the timeframe that heat treat operations were conducted in this area; however, this area is currently beneath an addition to the Main Manufacturing Building that was constructed in 1950.

3.20.3.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB82-11 was advanced in this area. Two soil samples were collected from 0 to 2 feet bgs and 20 to 22 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.20.3.

3.20.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.20.4 AOI 16.4 –Former Heat Treat Building No. 2

3.20.4.1 Historical Operations

A former Heat Treat Building was located to the south of the Main Manufacturing Building and the former Baler House in a 1955 drawing; however, no rows or columns were present on available drawings. It is estimated that this structure was located from approximately Columns H to 0, Rows 45 to 50. No further information was available regarding the timeframe that heat treat operations were conducted in this area. Based on the review of available historical aerial photographs, it is not present on the 1960 aerial photograph and it is currently beneath an addition to the former Main Manufacturing Building that was built in 1986.

3.20.4.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB83-11 was advanced in this area. Two soil samples were collected from 0 to 2 feet bgs and 17 to 19 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.20.4.

3.20.4.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.21 AOI 17 – Former Tool and Die Operations

3.21.1 AOI 17.1 –Main Manufacturing Building Operations

3.21.1.1 Historical Operations

Tool and Die Operations (TDO) were conducted between Columns AA and O, Rows 1 to 11. A below grade grinding swarf and chip conveyor system is present in this area, running east west, then turning southward until Column AA, Row 11 to 12, where the materials were brought aboveground and placed in a gondola. A small heat treat area was also present in this area. Historical operations in this area also included an electrical discharge machine (EDM) and milling operations. The swarf and conveyor system was not intended to transfer hazardous materials and there was no information or evidence indicating a release.

3.21.1.2 Previous Investigations and Remedial Actions

During the initial Site Wide Investigation, various PAHs were detected in SB84-11 at concentrations above the Nonresidential DCC in the soil sample collected from 3 to 5 feet bgs. Based on these exceedances, four additional soil borings (SB137-11 through SB140-11) were advanced and soil samples collected for laboratory analysis for TCL VOCS, PAHs, PCBs, and Site-specific TAL metals to further evaluate the extent of contamination in this area. The additional delineation samples did not indicate evidence of impacts above the DCC. This area was subsequently excavated for disposal during Site demolition activities. The details of the excavation and verification sample

results are presented in the memorandum Summary of Sampling and Remedial Action Activities – 2011 and 2012 as referenced in Section 3.1.

Three additional soil borings (SB85A-11, SB86-11, and SB87-11) were advance in this area during the initial Site-Wide Investigation. Two soil samples were collected from SB85A-11 at 0 to 2 feet bgs and 19-21 feet bgs. Two soil samples were collected from SB86-11 at 0 to 2 feet bgs and 20 to 22 feet bgs. Two soil samples were also collected from SB87-11 at 0 to 2 feet bgs and 18 to 20 feet bgs. The soil samples were collected for laboratory analysis for VOCS, PAHs, PCBs, and Site-specific TAL metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.21.1.

3.21.1.3 Current Status and Conclusions

Based on the results of the investigation and remedial action discussed above, no additional action related to this AOI is necessary.

3.21.2 AOI 17.2 – Historical Exterior Die Storage

Historical Operations

Based on discussions with Site personnel, dies and scrap metal roll-offs were historically stored outside the facility, primarily on the southern portion. This area was not and is not entirely paved. The potential exists for oils on the dies to impact the underlying soils or stormwater during exterior storage. PCBs have been detected on stamping and TDO equipment utilized within the facility. There was no information or evidence of a release of materials associated with the storage.

Previous Investigations and Remedial Actions

Three soil borings (SB88-11, SB89-11, and SB90-11) were advance in this area during the initial Site-Wide Investigation. Two soil samples were collected from the 0 to 2 feet bgs and 12 to 14 feet bgs interval in each soil boring. The soil samples were collected for laboratory analysis for VOCS, PAHs, PCBs, and Site-specific TAL metals. A groundwater sample was also collected from SB88-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). The groundwater sample results exhibited a concentration of PCE that exceeded the Part 201 Residential and Nonresidential DWC. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.21.2. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

3.21.2.1 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.22 AOI 18 – Former Coolant Recovery System

3.22.1 Historical Operations

Based on the review of a 1953 drawing, a coolant recovery and chip disposal system, including sterilizer, was present between Columns Y to W, Rows 49 to 50. No further information regarding the system was available. There was no information or evidence indicating a release from the coolant system.

3.22.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB91-11 was advanced in this area. Two soil samples were collected from at 20 to 22 feet bgs and 17 to 19 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.22.

3.22.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.23 AOI 19 – Former Stamping Operations

3.23.1 Historical Operations

Blanking and stamping press operations were conducted between Columns AA and O, Rows 12 to 55. A basement and metal scrap conveyor is located beneath this area, which leads to the most recently used Baler House. Stamping operations utilize oils and may have utilized solvents during operations. Review of available drawings indicates the presence of numerous tanks, likely containing hydraulic oil for the presses, located in pits beneath the presses throughout the blanking area. The tanks were identified to primarily consist of 4-foot by 8-foot tanks on a concrete. These tanks are identified on a 1939 drawing of the area with Press Lines E, F, G, H, J and K, which are located between Columns C and K, Rows 13 to 22.

3.23.2 Previous Investigations and Remedial Actions

Significant staining and pooled oil were noted on the ground surface in the basement near the stamping operations and in visually accessible below grade concrete press pits. Additionally, oil was observed to be present on the walls of the basement areas, from the stamping operations on the first floor of the facility.

During the initial Site-Wide Investigation seven soil borings were advanced in this area. Two soil samples were collected from SB92-11 at 0 to 2 feet bgs and 17 to 19 feet bgs. Two soil samples were collected from SB93-11 at 0 to 2 feet bgs and 16 to 18 feet bgs. Two soil samples were collected from SB94-11 at 0 to 2 feet bgs and 16 to 18 feet bgs. Two soil samples were collected from SB96-11 at 0 to 2 feet bgs and 20 to 22 feet bgs. Two soil samples were collected from

SB97-11 at 0 to 2 feet bgs and 20 to 22 feet bgs. Two soil samples were collected from SB98-11 at 0 to 2 feet bgs and 20 to 22 feet bgs. Two soil samples were collected from SB99-11 at 0 to 2 feet bgs and 20 to 22 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.23.

3.23.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.24 AOI 20 – Above Ground Storage Tanks (ASTs)

According to Site personnel and based on a review of available information, several non-regulated ASTs supported operations at the Site. ASTs present a potential for a release to the environment if the integrity of the AST is compromised causing a leak or, if a release occurs during periods of tank filling and/or dispensing. Each of the Site's registered and non-regulated ASTs was, therefore, considered an AOI as discussed below, with the exception of the ASTs associated with the WWTP, Power House, and Stormwater Retention Pond, which are discussed in their respective sections.

3.24.1 AOI 20.1 Oil Stores ASTs

3.24.1.1 Historical Operations

Five ASTs were present in the Oil Stores area inside of the Main Manufacturing building. The ASTs included the following: one 6,000-gallon single-walled fiberglass AST that formerly contained steam cleaner; two 9,700-gallon single-walled steel ASTs that formerly contained different weights of motor oil; one 6,000-gallon single-walled steel AST that formerly contained reclaimed oil; and one 6,000-gallon single-walled steel AST that formerly contained used oil. The tanks were located inside of a secondary containment area. No significant staining was noted in the visibly accessible areas around the ASTs at the time of the Site inspection, and the concrete appeared to be in good condition.

3.24.1.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the Oil Stores ASTs other than removal of the tanks and the associated concrete floor and containment structure by the WBRA during decommissioning and demolition activities.

3.24.1.3 Current Status and Conclusions

Based on evidence that the concrete below the Oil Stores ASTs appeared to be in good condition and there was no evidence of staining; therefore, no additional action related to this AOI is necessary.

3.24.2 AOI 20.2 – South Pump House AST

3.24.2.1 Historical Operations

One 400-gallon steel diesel fuel AST was located in the South Pump House, as fuel for a back-up generator. No significant staining was noted in the visibly accessible areas around the AST at the time of the Site inspection, and the concrete appeared to be in good condition.

3.24.2.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the South Pump House AST other than removal of the AST and associated concrete floor by the WBRA during decommissioning and demolition activities.

3.24.2.3 Current Status and Conclusions

Based on the nature of chemicals stored in the South Pump House AST, it was considered an AOI. Based on evidence that the concrete below the South Pump House AST appeared to be in good condition and there was no evidence of staining; therefore, no additional action related to this AOI is necessary.

3.24.3 AOI 20.3 – Former North Pump House AST

3.24.3.1 Historical Operations

One 500-gallon steel diesel fuel AST was formerly located in the North Pump House, as fuel for a back-up generator. No significant staining was noted in the visibly accessible areas around the AST at the time of the Site inspection, and the concrete appeared to be in good condition.

3.24.3.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the North Pump House AST.

3.24.3.3 Current Status and Conclusions

Based on the nature of chemicals formerly stored in the North Pump House AST, it was considered an AOI. Based on evidence that the concrete below the North Pump House AST location appeared to be in good condition and there was no evidence of staining; therefore, no additional action related to this AOI is necessary.

3.24.4 AOI 20.4 – Cooling Tower Pump House AST

3.24.4.1 Historical Operations

One 900-gallon steel diesel fuel AST was located in the Cooling Tower Pump House. No significant staining was noted in the visibly accessible areas around the AST at the time of the Site inspection, and the concrete appeared to be in good condition.

3.24.4.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the Cooling Tower Pump House AST.

3.24.4.3 Current Status and Conclusions

Based on the nature of chemicals stored in the Cooling Tower Pump House AST, it was considered an AOI. Based on evidence that the concrete below the Cooling Tower Pump House AST appeared to be in good condition prior to removal by the WBRA during decommissioning activities, and there was no evidence of staining; therefore, no additional action related to this AOI is necessary.

3.24.5 AOI 20.5 – Former Bulk Deadener AST

3.24.5.1 Historical Operations

According to MDEQ records reviewed, one 4,000 gallon AST containing bulk deadener was historically located in the "bulk deadener storage area" (P-51). Deadener was applied to parts through spray application to reduce the automobile's interior noise levels. The AST was identified in Permit to Install No. 20-78 issued February 28, 1978. No further information was available regarding the AST.

3.24.5.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the former Bulk Deadener AST.

3.24.5.3 Current Status and Conclusions

Based on the nature of chemicals stored in the former bulk deadener AST, it is considered an AOI. Based on evidence that the concrete below the former bulk deadener AST appeared to be in good condition and there was no evidence of staining; therefore, no additional action related to this AOI is necessary.

3.25 AOI 21 – Substations

3.25.1 Historical Operations

Electricity was provided on Site by the following substations:

- Roof Top Substations: Substations D, E, G, J, L, N, O, P, S, T, U, W, X, Y, and Z (Main Manufacturing Building) and Substations H and Q (Power House Substation)
- Basement Substations: Substations B, C, F, K, M and V (Main Manufacturing Building)
- Ground Floor Substations: Substation R (Baler House)

No information was available regarding the potential historical presence of Substations A or I on the Site. These substations may have been associated with a former Site structure (i.e., former Power House, etc.); however, that could not be confirmed.

Based on the above, each of the substations is identified as sub-AOIs, as listed below:

- AOI 21.1 – Substation B
- AOI 21.2 – Substation C
- AOI 21.3 – Substation D
- AOI 21.4 – Substation E
- AOI 21.5 – Substation F
- AOI 21.6 – Substation G
- AOI 21.7 – Substation H
- AOI 21.8 – Substation J
- AOI 21.9 – Substation K
- AOI 21.10 – Substation L
- AOI 21.11 – Substation M
- AOI 21.12 – Substation N
- AOI 21.13 – Substation O
- AOI 21.14 – Substation P
- AOI 21.15 – Substation Q
- AOI 21.16 – Substation R
- AOI 21.17 – Substation S
- AOI 21.18 – Substation T
- AOI 21.19 – Substation U
- AOI 21.20 – Substation V
- AOI 21.21 – Substation W
- AOI 21.22 – Substation X
- AOI 21.23 – Substation Y
- AOI 21.24 – Substation Z

Potential issues associated with the Roof Top Substations (Substations D, E, G, H, J, L, N, O, P, Q, S, T, U, W, X, Y, and Z) are related to potential stormwater impacts and are addressed under AOIs 22 and 35; therefore, these Substations are not discussed in this section.

Based on the review of available documentation, three substations at the Site were confirmed to have utilized PCB electrical equipment; Substation K, Substation H and Substation Q. Releases are documented associated with Substation K, which was also historically utilized as a PCB storage area. Staining was noted on the concrete surface in these substations. It should be noted that the concrete floor in a number of the substations was painted. Transformers in all of the Site

substations were gas-filled; however, the manufacture dates indicated the potential for the most recently used transformers to be replacement transformers. Labeled PCB large capacitors were observed in Substations B and E during the Site inspection. No specific information is available regarding the potential for additional PCB electrical equipment currently or historically present in the electrical equipment in the substations at the Site or releases there from.

The concrete floor slab in basement Substation K was identified during decommissioning activities to be impacted with PCBs at a concentration above 1 part per million (ppm). Substation K was documented to have historically utilized electrical equipment containing PCB dielectric fluid, was historically utilized as a PCB storage area, and had historical releases from the equipment.

3.25.2 Previous Investigations and Remedial Actions

Consistent with the requirements of TSCA, SME conducted delineation activities on behalf of the WBRA related to the PCB detections in concrete. Based on the detections of PCBs, an approximate 1 to 2-foot thick layer of concrete was removed from the floor slab in the northeastern corner of the former substation. Analytical results for remediation verification concrete core samples collected subsequent to the removal of the upper portion of the slab indicated that PCBs were present in the concrete at concentrations above 1 ppm. Based on the analytical results, removal and disposal of the entire thickness of the concrete in this area was selected to address the detections of PCBs in the concrete.

Based on the unknown concentration of PCBs in the concrete at the bottom of the slab that was removed (i.e., the portion of the slab immediately overlying the below soil), on May 4, 2012, CRA collected two soil samples (Substation K 1 and Substation K 2) from the underlying soil beneath the northern and southern portions of the removed slab, respectively, to evaluate the potential presence of PCBs in the soil at concentrations above 1 ppm. The soil samples were submitted to the analytical laboratory for analysis of PCBs.

The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. PCBs were not detected in the soil sample above 1 ppm. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.25.

3.25.3 Current Status and Conclusions

Further assessment of this AOI after SME's remediation of Substation K indicates that no release of PCB-containing oil to the underlying soils had occurred. Therefore, no additional action related to this AOI is necessary.

3.26 AOI 22 – Stormwater Retention Pond

3.26.1 Historical Operations

Based on files reviewed at the former plant, the stormwater retention basin was originally constructed in 1972 on property owned by Consumers, for which GMC secured an easement agreement. The basin was reported to be lined with a rubber liner and equipped with two containment booms that diverted floating oil to a skimmer installed in the basin outlet. Oil was pumped from the skimmer to a 4,000-gallon AST located adjacent to the west of basin, which has

been removed as a result of redevelopment of the Site by Kendall Electric, Inc. Significant sediment accumulation and vegetation growth were observed in the retention basin during an inspection in 2001, which resulted in upgrades to the pond in 2002/2003. The pond upgrades included removal and disposal of accumulated sediment and the former rubber liner material. Based on the review of available documentation, the stormwater retention pond received discharges from portions of the Site roof and foundation drains, and historically also received discharges from non-contact cooling water and the groundwater treatment system. Roof drains were observed in proximity to several caged (i.e., no roofs or walls) substations, including Substations H and Q located on the roof of the Power House that historically were documented to include PCB transformers. No information was identified that the liner on the pond had failed prior to the upgrades or has failed subsequent to the upgrades.

Additionally, a stormwater lift station is located on the southwestern portion of the property, which historically pumped stormwater to a gravity discharge line that lead to the stormwater retention pond. The lift station pumps are currently not in use; however, the main discharge line from the lift station continues to convey stormwater to the retention pond from other gravity-fed cross connections on-Site. The stormwater pond historically discharged to Cole Drain under a NPDES permit. Permit effluent monitoring and sampling were discussed in further detail in the CCR.

3.26.2 Previous Investigations and Remedial Actions

Prior to removal and disposal of the accumulated sediment and liner materials, sediment samples were collected from the retention pond in September 2002 and analyzed for waste characterization parameters, which indicated detections of several metals. Current conditions associated with groundwater and soil beneath and in the vicinity of the pond are unknown.

3.26.3 Current Status and Conclusions

Based on metals detected in waste characterization samples and the presence of PCB transformers located near roof drains that eventually discharged to the stormwater retention pond during sediment removal/liner replacement, the timeframe these operations occurred, and the potential to impact the subsurface, the stormwater retention pond was considered an AOI. AOI 22 is located off-Site, accordingly, AOI 22 is not addressed as part of this NFA.

3.27 AOI 23 – Wood Floor Block

3.27.1 Historical Operations

Based on the review of available documentation and observations during the Site inspection, wood floor block was historically present throughout the facility. Operations that have been identified to have utilized oils containing PCBs were conducted at the Site.

3.27.2 Previous Investigations and Remedial Actions

Analytical results for samples collected from wood floor block and associated mastic materials have indicated the presence of PCBs in the materials.

3.27.3 Current Status and Conclusions

Based on the known spillage of oils to the flooring material at the Site, and detections and use of PCBs in oils utilized and wood flooring material removed from the Site in the past, the potential presence of PCBs in wood flooring material at the Site was considered an AOI. Further assessment of this AOI was recommended during building decommissioning and demolition activities and all wood flooring was removed during demolition. Observations during the decommissioning and demolition activities did not indicate any potential releases to the subsurface related to wood floor block. Therefore, no additional action related to this AOI is necessary.

3.28 AOI 24 – Former Tar House

3.28.1 Historical Operations

Based on the review of documentation from 1978, a "tar house", which was used to heat tar for floor block repairs, was located south of the Main Manufacturing Building near the Storm Sewer Pump House at that time. No further information regarding the tar house was available. No information was identified regarding operations in the Tar House or any evidence of releases there from.

3.28.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB100-11 was advanced in the approximate location of the former Tar House. Soil samples were collected for chemical analysis from the 0.5 to 2.5 feet bgs interval immediately beneath a concrete slab and from the 8-10 feet bgs interval. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. Based on the analytical results, PCBs were detected in the soil sample collected from 0.5 to 2.5 feet bgs from SB100-11 at a concentration of 3.3 mg/kg.

Based on the detection of PCBs above 1 mg/kg in the shallow soil sample collected from SB100-11, five additional soil borings were advanced in September 2011 (SB162-11 through SB166-11). Four soil borings (SB162-11 through SB165-11) were advanced on 3 meter (approximately 10 feet) spacing directly to the north, south, east, and west of SB100-11, and one soil boring (SB166-11) was advanced adjacent to SB100-11 to evaluate the vertical and horizontal PCB impacts consistent with 40 CFR 761 Subpart N "Cleanup Site Characterization Sampling for PCB Remediation Waste in Accordance with §761.61(a)(2)." Soil samples were collected for chemical analysis for PCBs in 2-foot intervals beginning immediately beneath the concrete slab and continuing to approximately 10 feet bgs. Soil samples collected from the interval immediately beneath the concrete slab were analyzed by the laboratory, with the underlying 2-foot interval samples placed on hold at the laboratory pending receipt of the initial analysis for the known impacted interval. Based on the analytical results, PCBs were detected in samples collected from SB165-11 (at 0 to 2 ft bgs, 2 to 4 ft bgs, and 4 to 6 ft bgs) and SB166-11 (at 0 to 2 ft bgs and 2 to 4 ft bgs) at concentrations above 1 mg/kg.

Based on the results of the September 2011 investigation, eight soil borings (SB200-12 through SB206-12, and SB215-12) were advanced in October 2012. Five soil borings (SB202-12 through SB206-12) were advanced on 3 meter (10-foot) spacing to the northwest, west, southwest, and south of SB165-11 to further evaluate the vertical and horizontal extent of impacts. An additional

boring (SB215-12) was advanced adjacent to SB165-11 to further evaluate the vertical extent of impacts in this area. Two soil borings SB200-12 and SB201-12 were advanced on a 3 meter (10-foot) spacing to the northeast and southeast of SB166-11 to further evaluate the vertical and horizontal extent of impacts. Soil samples were collected from each boring for chemical analysis for PCBs in 2-foot intervals beginning immediately beneath the concrete slab and continuing to approximately 10 ft bgs. Based on the analytical results, PCBs were detected in a sample collected from SB203 12 (at 8 to 10 ft bgs) at a concentration above 1 mg/kg.

Based on the results of the October 2012 investigation, eight soil borings (SB223-13 through SB230-13) were advanced in April 2013. Seven soil borings (SB224-14 through SB230-13) were advanced on 3 meter (10 foot) spacing to the north, east, southeast, south, southwest, west, and northwest of SB203-12 to further evaluate the vertical and horizontal extent of impacts. One soil boring (SB223-13) was advanced adjacent to SB203-12 in order to confirm the original result and collect samples at deeper intervals. Based on the analytical results, PCBs were detected in samples collected from SB223-13 (at 8 to 10 ft bgs and 10 to 12 ft bgs), SB224-13 (at 10 to 12 ft bgs), SB225 13 (at 10 to 12 ft bgs), SB226-13 (at 6 to 8 ft bgs), SB227-13 (at 4 to 6 ft bgs, 6 to 8 ft bgs, and 8 to 10 ft bgs), and SB228-13 (at 2 to 4 ft bgs) at concentrations above 1 mg/kg.

Based on the results of the April 2013 investigation, the decision was made to modify the delineation approach presented in 40 CFR 761 Subpart N "Cleanup Site Characterization Sampling for PCB Remediation Waste in Accordance with §761.61(a)(2)" in order to reduce the number of samples necessary to characterize the PCB contamination in this area. 40 CFR 761 Subpart N identifies the utilization of a 3 meter (10-foot) spacing grid for the collection of characterization samples; this Plan proposes the use of an approximate 6 meter (20-foot) spacing grid for the collection of characterization samples, depending on Site conditions encountered. The rationale behind this modification is that the extent of soil removal associated with the former Tar House Area will ultimately be determined by verification soil sampling, which will be performed in accordance with 40 CFR 761 Subpart O "Sampling to Verify Completion of Self Implementing Cleanup and On Site Disposal of Bulk PCB Remediation Waste and Porous Surfaces," to the extent necessary to achieve the proposed clean up goals.

Based on the above outlined approach, in August 2013 eight soil borings (SB255-13 through SB262-13) were advanced to the north, northeast, east, southeast, south, southwest, west, and northwest of the area of previous investigations at an approximate spacing of 10 to 20 feet beyond the outermost delineation grid boring. Soil samples were collected from immediately beneath the concrete slab/asphalt road to just above the water table (approximately 14 to 16 ft bgs). Samples were collected in 2-foot intervals and all samples were analyzed by the analytical laboratory. Based on the analytical results, PCBs were not detected in any of the samples collected at a concentration above 1 mg/kg.

A Risk-Based PCB Cleanup Plan was prepared for the former Tar House and Bulk Unload Areas and submitted to the U.S. EPA – Region 5, the MDEQ, and the Kent County Health Department (KCHD) on August 26, 2014 in accordance with the procedures set forth in 40 CFR 761.61 of the TSCA regarding the characterization and remediation of PCB remediation waste. Following U.S. EPA review of the Risk-based Plan, it was determined by U.S. EPA that the proposed cleanup could be completed under the self-implementing cleanup guidelines for bulk PCB remediation waste specified under 40 CFR 761.61(a). Additionally, U.S. EPA requested that the surface materials

(concrete and asphalt) be characterized according to self-implementing cleanup guidelines. The proposed porous surface sampling plan, results of sampling, and RACER's intention to complete the self-implementing cleanup were included in two separate addendum letters submitted to U.S. EPA. Approval to complete the self-implementing cleanup was received from U.S. EPA on March 30, 2015.

The bulk PCB remediation waste removal activities were conducted between June 26, 2015 and July 28, 2015. Soils containing concentrations of PCBs greater than 10 ppm were excavated using a hydraulic excavator to a depth of approximately 5 ft bgs. A total of approximately 170 tons of soil containing PCBs were removed from the former Tar House Area. A total of approximately 26 tons of concrete overlying the soil was also removed. All soils and concrete were transported to and disposed of at Waste Management, Inc.'s (WM) Autumn Hills Landfill in Zeeland, Michigan, in accordance with 40 CFR 761.61(a)(5).

The details of the remedial excavation are presented in the Soil Containing PCB Cleanup Completion Summary Report submitted to U.S. EPA, MDEQ, and the KCHD on November 13, 2015.

3.28.3 Current Status and Conclusions

Based on the results of the remedial activities discussed above and the Low Occupancy Area designation presented in the RC, no additional action related to this AOI is necessary.

3.29 AOI 25 – Former Maintenance Degreaser

3.29.1 Historical Operations

A former degreaser was operated in the maintenance shop at Column T, Row 27 from 1953 to 1979. According to Site personnel, this degreaser was an open top metal tank situated in a concrete pit, where equipment was dipped using an overhead crane.

3.29.2 Previous Investigations and Remedial Actions

The Site is listed in the SHWS Database as General Motors – CPC Metals (Facility Identification No. 41000115) and a status of "interim response in progress." The listing is primarily associated with a release of TCE from the former degreaser. VOC-impacts to soil and groundwater in this area were identified in 1985 and investigations were conducted between 1985 and 1989 to evaluate the nature and extent of the impacts at the Site and the adjacent properties to the north of the Site. In 1989, a combination groundwater extraction and SVE system was installed in the source area in the plant, with quarterly groundwater monitoring conducted. In 1993, a second groundwater purge well was installed at the northern property line. The SVE and groundwater extraction systems were run with quarterly groundwater monitoring occurring until 2004 and 2005, respectively, when it was identified that the systems had removed significant VOC mass and were no longer effectively removing additional VOC mass. Additional investigations to further evaluate the extent of the groundwater impacts to Part 201 Criteria were conducted between 2003 and 2010. Response actions associated with the VOC impacts have been conducted on a voluntary basis under Part 201.

3.29.2.1 Additional Soil Investigation – 2014

Demolition activities conducted in 2011 and 2012 on behalf of the WBRA prompted the removal of the Main Manufacturing Building and associated concrete floor slab overlying AOI 25. After completion of demolition activities, the Site was re-graded by WBRA's contractor. The final grade across the Site is presented on a partial as-built survey provided by WBRA and is included in Appendix C.

3.29.2.2 Historical Sample Location Survey

A limited survey of historical sample locations was completed prior to commencement of soil investigation activities. Eight historical sample locations (SB1-04, SB2-04, SB4-04, SB5-04, SB7-05, SB8-05, SB12-05, and SB15-05) in the area of AOI 25 were located during the survey and the current ground surface elevations were recorded. The current ground elevations were compared to historical survey elevation data for several sample locations in AOI 25 to determine the change in elevation after demolition of the former Main Manufacturing Building, removal of the concrete floor slab, and final Site re-grading.

3.29.2.3 Soil Investigation Activities

In order to evaluate the current concentrations of VOCs in the former source area subsequent to demolition and re-grading activities, three soil borings (SB326-14 through SB328-14) were advanced with a hand auger adjacent to historic sample locations to a depth of 4 feet bgs. Soil samples were collected in 2-foot intervals for laboratory analysis of TCL VOCs. The details of results of this investigation were submitted to the MDEQ in the memorandum titled AOI 25 – Former Degreaser Area Investigation as identified in Section 3.1.

3.29.2.4 Groundwater Investigation Activities

Based on the location of the former degreaser utilized in AOI 25 and previous sample results of MW35-12 and MW41-12 indicating detections of 1,1,1-TCA below Part 201 GRCC, groundwater samples were collected from monitoring wells MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.29.3 COC Temporal Trends in Groundwater

Groundwater sampling at the Site has occurred at varying frequencies at different monitoring wells since 1985. One of the lines of evidence considered in evaluation is the presence or absence of trends in concentrations over time for groundwater COCs. In particular, stable or decreasing trends are looked to as indictors that natural attenuation is occurring. Additionally, the occurrence of transitional increasing trends of degradation products may also provide evidence that supports MNA. The available VOC data were examined and a qualitative evaluation was performed. This consisted of an examination of concentration versus time graphs for the monitoring wells where sufficient data were available.

3.29.3.1 Concentration Trend Analysis

Examination of the concentration versus time for the source monitoring wells indicates that the concentrations of the various VOCs have been stable or decreasing over time. The VOC concentrations in the source area wells (e.g., MW35-12 and MW37-12) indicate an apparent short-term increasing concentration trends after removal of the building slab. The most recently measured concentrations remain in the range of previous concentrations indicate the increasing trend in the source area has since stabilized.

In spite of the above-noted localized and previous short-term increasing concentration trends, the limit of the VOC plume has decreased over time suggesting a shrinking plume scenario. For example, TCE concentrations at peripheral and off-Site monitoring wells have decreased to below residential DWC or to non-detect values from higher concentrations in the past.

3.29.3.2 Summary

The evaluation of COC trends was conducted to assess the stability of the groundwater plume at the Site. The trend evaluation has shown that for the most part there is no measurable change in the COC concentrations. In the source monitoring wells, some increasing trends are observed, especially over the most recent data. It is expected to see transitional increases of degradation products in source areas where degradation of the parent compounds is occurring.

However, increasing trends were not noted in the downgradient wells. Either no trends were observed or the COCs were non-detect or trace level detections. This confirms that the groundwater plume is stable or receding.

3.29.4 COC Spatial Trends

The COC concentrations for a given time period were found to decrease along the groundwater flow path. Evaluation of the monitoring well network and the COC concentrations over distance and space indicate that the COC plume is fully delineated upgradient, downgradient and laterally, such that no COCs exceed Part 201 Criteria in the peripheral monitoring wells to the south, north, northwest and northeast. Figure 3.5 presents a depiction of the plume extent based on results from the April 2017 semi-annual groundwater monitoring event.

3.29.5 Current Status and Conclusions

Based on the known exceedances of the Part 201 Criteria associated with the chlorinated VOC impacts to soil and groundwater at the Site, the VOC-impacted soil and groundwater associated with the former degreaser was considered an AOI. However, the restrictions on groundwater use that exist in the current RC prevent any potential exposure; therefore, no additional action related to this AOI is necessary.

3.30 AOI 26 – Additional Former Degreasing Operations

3.30.1 AOI 26.1 – Shell Cooler After Degreaser

3.30.1.1 Historical Operations

An area identified as "shell cooler after degreaser" was present on a 1944 drawing between Columns V and W, Row 34. No further information was available regarding the former degreaser.

3.30.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB102-11 was advanced in this area. Two soil samples were collected at 1 to 3 feet bgs and 19 to 21 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB102-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.30.1. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

Based on the location of the shell cooler after degreaser utilized in AOI 26.1 and previous sample results of MW35-12 and MW41-12 indicating detections of 1,1,1-TCA below Part 201 GRCC, groundwater samples were collected from monitoring wells MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.30.1.3 Current Status and Conclusions

Results of the samples collected in this area did not exhibit any exceedances of Part 201 Criteria. Therefore, no additional action related to this AOI is necessary.

3.30.2 AOI 26.2 – Former Degreaser (U-46)

3.30.2.1 Historical Operations

A degreaser is identified on a 1953 drawing at Column U, Row 46. No further information was available regarding the former degreaser.

3.30.2.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB103-11 was advanced in this area. Three soil samples were collected at 0 to 2 feet bgs, 2 to 4 feet bgs, and 19 to 21 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The sample collected from 2 to 4 feet bgs exhibited a concentration of TCE that exceeded the residential and Nonresidential DWPC.

Based on the location of the former degreaser utilized in AOI 26.2 and previous sample results of MW35-12 and MW41-12 indicating detections of 1,1,1-TCA below Part 201 GRCC, groundwater samples were collected from monitoring wells MW 32-12, MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.30.2.3 Current Status and Conclusions

A RC is currently in place at the Site that restricts the use of groundwater as a drinking water source. Therefore, no additional action related to this AOI is necessary.

3.30.3 AOI 26.3 – Former Degreaser (RS-9)

3.30.3.1 Historical Operations

A degreaser was historically located at Columns R to S, Row 9. No further information was available regarding the former degreaser.

3.30.3.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB104-11 was advanced in this area. Two soil samples were collected at 1 to 3 feet bgs and 20 to 22 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB104-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). The groundwater sample results indicated a concentration of TCE that exceeded the Residential and Nonresidential DWC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.30.3. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

Based on the location of the former degreaser utilized in AOI 26.3 and previous sample results of MW35-12 and MW41-12 indicating detections of 1,1,1-TCA below Part 201 GRCC, groundwater samples were collected from monitoring wells MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.30.3.3 Current Status and Conclusions

Results of the soil samples collected in this area did not exhibit any exceedances of Part 201 Criteria. The detection of TCE in the groundwater sample is likely related to impacts associated with a separate AOI. Therefore, no additional action related to this AOI is necessary.

3.30.4 AOI 26.4 – Former Degreaser (O-44)

3.30.4.1 Historical Operations

A degreaser was historically located at Column O, Row 44. No further information was available regarding the former degreaser.

3.30.4.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB105-11 was advanced in this area. Two soil samples were collected at 1 to 3 feet bgs and 17.5 to 19.5 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB105-11 after the installation of a 1-inch diameter PVC screen and riser and submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, and Site-specific TAL metals (dissolved). Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.30.4. Temporary monitoring well sample results compared to Part 201 Criteria are presented in Table 3.2. Refer to Figure 3.2 for sample locations.

Based on the location of the former degreaser utilized in AOI 26.4 and previous sample results of MW35-12 and MW41-12 indicating detections of 1,1,1-TCA below Part 201 GRCC, groundwater

samples were collected from monitoring wells MW 31-12, MW35-12, MW41-12, and MW60-14 and submitted to the analytical laboratory for analysis of 1,4-dioxane. The results did not indicate an exceedance of the 1,4-dioxane DWC established pursuant to the Rule package, Cleanup Criteria Requirements for Response Activity, criteria specific to the Residential DWC that was promulgated on October 20, 2017. A summary of the sampling is presented in Appendix E.

3.30.4.3 Current Status and Conclusions

Results of the samples collected in this area did not exhibit any exceedances of Part 201 Criteria. Therefore, no additional action related to this AOI is necessary.

3.31 AOI 27 – Oil Stores Bulk Unload Area (Bulk Unload Area)

3.31.1 Historical Operations

The Site formerly utilized the area to the west of Oil Stores for the bulk unloading of petroleum products. This area included exterior load/unload fill ports and associated concrete pad, sump, and containment trench.

3.31.2 Previous Investigations and Remedial Actions

The containment trench in this area was installed in 2004. During the installation of the containment trench, excavated materials were identified to have exceeded the TCLP for lead. Subsequently, investigations were conducted in this area in 2005 through 2014 to evaluate the nature and extent of impacts. The investigations in the bulk unload area near the current Oil Stores area have identified the presence of metals, VOCs, and PAHs at concentrations above the Part 201 Criteria in soil and PCBs at a concentration above the High Occupancy Area Cleanup Level of

1 ppm/1 mg/kg for bulk remediation waste (without further conditions) set forth in 40 CFR 761.61(a) of the TSCA regarding the characterization and remediation of PCB remediation waste. The details of the bulk PCB remediation waste removal activities are discussed further in Section 3.31.2.1 below.

An Excavation Work Plan submitted to the MDEQ, and approved on March 12, 2015, outlined the details of the delineation, waste characterization, and remediation scope-of-work developed to remove and dispose of soil exhibiting exceedances of Nonresidential DCC and Nonresidential PSIC. Modifications to the original scope of work (SOW) presented in the Work Plan were submitted to MDEQ via email on May 13, 2015 and subsequently approved on May 26, 2015. The original Work Plan included the removal of soils impacted above the Nonresidential DCC and Nonresidential PSIC to a depth of 4 feet bgs. The implementation of this SOW would have left some Nonresidential DCC and Nonresidential PSIC exceedances at deeper depths in the Zc and Bulk Unload Areas between 4 and 8 feet bgs, which were anticipated at the time to be addressed via a RC. The modifications included in the email request related to the Bulk Unload Area are outlined below:

- In the Bulk Unload Area, SB107-11 had PAHs above the Nonresidential DCC and chromium (total) above the Nonresidential PSIC at 4 to 6 feet bgs. RACER proposed to remove this material.
- In the Bulk Unload Area, SB109-11 had PAHs above the Nonresidential DCC at 4 to 6 feet bgs. RACER proposed to remove this material.
- In the Bulk Unload Area, SB21-05 had lead above the Nonresidential DCC and chromium (total) above the Nonresidential PSIC. RACER proposed to remove this material and conduct verification sampling consistent with the procedures in the Work Plan. Additionally, SB21-05 had chromium (total) above the Nonresidential PSIC at 6 to 8 feet bgs. RACER proposed to collect a sample of this material for chromium speciation to confirm if the exceedance remained. If speciation indicated that there was no issue/criteria exceedance, the material would remain. If speciation indicated that an exceedance was present, an evaluation would be made to determine if the material would remain and be addressed through a RC, or be removed and verification sampling conducted consistent with the procedures in the Work Plan.
- In the Bulk Unload Area, SB40-10 had PAHs above the Nonresidential DCC at 4 to 8 feet bgs. RACER proposed to remove this material.
- In the Bulk Unload Area, SB35-10 had lead and PAHs above the Nonresidential DCC at 4 to 6 feet bgs. RACER proposed to remove this material.
- In the Bulk Unload Area, SB27-07 had arsenic above the Nonresidential DCC at 4 to 6 feet bgs. RACER proposed to remove this material.
- In the Bulk Unload Area, SB28-07 had lead above the Nonresidential DCC, and chromium (total) and manganese above the Nonresidential PSIC at 4 to 6 feet bgs. RACER proposed to remove this material.
- Verification sampling would be conducted for only the parameters for which the original exceedance of the Nonresidential DCC or Nonresidential PSIC was identified, for example, if only lead exceeded these criteria in a given location, only lead would be analyzed in the

verification sample(s). This was not identified specifically in the Work Plan. Procedurally, sampling would be conducted in accordance with the Work Plan.

- The Work Plan indicated that the portion of the excavation that failed an in-situ characterization TCLP for lead would be removed and disposed of as hazardous soil. During the bidding process, Terra Contracting (Terra), the excavation contractor, identified a cost effective alternative that included the stabilization of the lead-impacted soils in this area to reduce the concentrations to levels that would allow the material to be disposed of as non-hazardous at a Type II landfill. Verification samples to confirm that the material is below the TCLP limit for lead would be collected from the material prior to removal from the excavation, and verification sidewall samples would be collected to confirm that the extent of the potentially hazardous material had been adequately delineated.

3.31.2.1 Bulk Unload Area Remedial Excavation – Summer 2015

On June 22, 2015, GHD and Terra mobilized to the Site to commence soil removal in the multiple areas on-Site, including the Bulk Unload Area. Site mobilization activities included a private utility scan conducted by a GPR subcontractor, mobilization of equipment and supplies, excavation area demarcation, and concrete saw cutting to expose the soil beneath the Bulk Unload Area.

The area of lead-impacted soil that exhibited TCLP results above 5.0 mg/L lead, classifying the soil as RCRA characteristic hazardous waste, was treated with a stabilization agent by Terra. The stabilization agent, Blastox-215©, consisted of silicate and calcium oxide compounds that, once completely mixed with the lead-impacted soil, is designed to stabilize the soluble lead compounds present in soil and prevent them from leaching above the RCRA characteristic waste limits during the TCLP. This stabilizing method alleviated the requirement to dispose of the soil at a RCRA hazardous waste landfill. Prior to soil stabilization with the use of an excavator bucket, sidewall samples were collected from this area (for TCLP analysis) and submitted to analytical laboratory to confirm that no additional soil stabilization was required. The results of the TCLP samples indicated that no additional soil stabilization was necessary. On June 25, 2015, Terra mixed the stabilization agent with the soil in the Bulk Unload Area and collected a composite TCLP sample for lead to confirm that the stabilized soil would not leach lead above the 5.0 mg/L limit. The results of the sampling indicated that the stabilized soil was no longer a characteristic hazardous waste and disposal could be completed at a Type II solid waste landfill. On July 6 and July 7, 2015, approximately 273 tons the stabilized soil and debris was excavated and transported to WM's Autumn Hills Landfill in Zeeland, Michigan. Verification sample results are presented in Table 3.31. The location of verification samples and the extent and depth of the excavation area are presented on Figure 3.6.

Between July 8 and July 10, 2015, approximately 1,000 tons of non-hazardous soil and debris, that included bricks, concrete, metal turnings, slag, metal debris, and other miscellaneous refuse was excavated for disposal. Verification samples were collected from the 0 to 4-foot and 0 to 6-foot sidewalls of the southern portions of the excavation area on July 13, 2015. Four sidewall samples were also collected from the 6 to 8-foot excavation area. Results of the verification sample analyses exhibited concentrations in several locations that exceeded the Nonresidential DCC and/or the Nonresidential PSIC. Additional excavation of the 6 to 8-foot excavation area, the western portion of

the excavation near SB109-11, and the 4 to 6-foot area at sample location “W Sidewall -006” was necessary.

During excavation activities an 8-inch water main was discovered aligned north to south through the center of the excavation area approximately 4 feet bgs. Through coordination with the City of Wyoming and review of historical Site information it was determined that the water main was likely abandoned. A “hot tap” was performed by a licensed plumber to confirm that there was no pressure in the water main and it was abandoned. Approval was received from the City of Wyoming to remove portions of the water main in the excavation area and install blind flanges at both ends of the disconnected line.

Between July 14 and July 15, 2015, approximately 470 tons of non-hazardous soil and debris was excavated and transported for disposal. On July 17, 2015 eight additional verification samples were collected from the 0 to 4-foot sidewalls around the anticipated excavation boundary. Results of the sample analyses did not indicate any exceedances of Nonresidential DCC or Nonresidential PSIC.

Additional excavation of approximately 190 tons of non-hazardous soil and debris was conducted between July 21 and July 22, 2015. Portions of the 8-inch water main in the excavation area were also removed and blind flanges were installed on the remaining water main ends. During excavation an area of black and dark gray soil exhibiting a strong weathered petroleum odor was discovered in the southwest portion of the excavation near the water main. A sample of the material was screened with a PID but no significant readings were measured. A soil sample (Stained soil w/ Petroleum Odor - SW Excavation Floor) was collected and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals. The results of the sample analysis did not indicate any exceedances of Nonresidential DCC or Nonresidential PSIC. The collection of 12 sidewall verification samples was completed during this time. The results of several sample analyses exhibited concentrations exceeding Nonresidential DCC and/or Nonresidential PSIC. Additional excavation of the 4 to 6-foot sidewalls was necessary.

Backfilling activities commenced concurrently with excavation for disposal in areas where no additional excavation was required. Backfilling included the placement of a demarcation layer on the floor of the excavation consisting of non-woven geotextile. A demarcation layer consisting of orange safety fence was also placed on the sidewalls of the excavation boundary. The excavation was backfilled with general fill in 1 to 2-foot lifts and compacted with a vibratory roller. Field compaction testing was completed between each lift to confirm the fill had a minimum of 95% of the maximum modified Proctor density.

Prior to additional excavation, sidewall samples were collected utilizing an excavator bucket on July 24, 2015 at locations where the additional excavation was anticipated to extend to. Results of the three samples indicated that additional excavation was necessary to remove soil to the west of sample location “W Sidewall -038”. The additional excavation of approximately 108 tons of non-hazardous soil and debris in the northern excavation area was completed on July 27, 2015 and the three additional sidewall samples collected did not exhibit exceedances of Nonresidential DCC or Nonresidential PSIC.

Excavation of approximately 86 tons of non-hazardous soil and debris near SB107-11 was completed on July 29, 2015. Four sidewall excavation samples were collected on July 29, 2015. Results of the sample analyses indicated exceedances of Nonresidential DCC.

During excavation activities, the 8-inch water main previously encountered was present on the north sidewall of the excavation. Removal of additional soil to the east and south of SB107-11 required removal of an additional section of the water main and relocation of the blind flange to the northern end of the excavation. The final locations of the blind flanges were surveyed prior to backfilling. During additional concrete removal and water main removal a seam of potential asbestos-containing material (ACM) including insulation materials and vermiculite was observed in the northeast corner of this excavation area. Multiple samples of the PACM/soil mixture were collected for analysis by polarized light microscopy (PLM) and transmission electron microscopy (TEM) to determine if the soil in this area contained a regulated ACM. The results indicated that none of the samples collected exceeded the Part 201 criteria (1% total ACM).

Between August 4 and August 6, 2015 additional excavation of approximately 344 tons of non-hazardous soil and debris located to the west, east, and south of SB107-11 was completed until the excavation extended south and west to the Bulk Unload Area excavation boundary and no additional south sidewall on the south or west side remained present to sample. Three sidewall verification samples were collected from the remaining sidewalls to the north and east. The results of the sample analyses did not indicate any exceedances of Nonresidential DCC or Nonresidential PSIC and no additional excavation was required. Figure 3.6 presents the extent and depth of the excavation area and the results of the final sidewall verification samples. Copies of the analytical laboratory reports are provided in Appendix D and in the Soil Containing PCB Cleanup Completion Summary Report prepared by GHD dated November 13, 2015. The remainder of the Bulk Unload Area was backfilled as described above and then covered with a 6-inch layer of compacted gravel and surfaced with 2 inches of asphalt pavement extended to the previously existing concrete and asphalt surfaces on the excavation boundary.

3.31.2.2 PCB Area Excavation

On June 25 and 26, 2015, a total of approximately 354 tons of asphalt, soil, and debris were removed from the former Bulk Unload Area. All soils were transported to and disposed of at WM's Autumn Hills Landfill in Zeeland, Michigan, in accordance with 40 CFR §761.61(a)(5). During excavation activities, a former concrete fence footer was discovered approximately 1-foot bgs adjacent to the existing fence on the property line. Additionally, a concrete storm sewer was discovered directly underneath the former concrete fence footer. The storm sewer was determined to be connected to the existing outfall at the northwest corner of the Site. An inspection of the interior of the storm sewer was completed and the pipe was found to be clean of any debris and dry. In an effort to preserve the existing storm sewer, soil was not removed underneath the sewer line and verification samples collected along the western sidewall were collected directly underneath the sewer line.

Results of verification sampling indicated that soils remaining in the floor and west sidewall (under the existing storm sewer) of the excavation contained PCBs at concentrations greater than the 10 ppm cleanup level. Additionally, an area in the northern portion of the excavation contained soils with a PCB concentration greater than 50 ppm requiring disposal at a TSCA-approved disposal

facility. RACER notified U.S. EPA on July 13, 2015 that soil containing PCBs at a concentration above 50 ppm was discovered and would be disposed of in accordance with TSCA.

On July 28, 2015 approximately 33 tons of TSCA-regulated soil and debris were excavated, loaded into a lined truck, and transported for disposal at the Wayne Disposal, Inc. landfill in Belleville, Michigan operated by US Ecology. Additionally, approximately 21 tons of non-TSCA soil and debris (including a portion of the existing concrete storm sewer) was removed from the western sidewall and southern excavation floor for disposal at WM's Autumn Hills Landfill.

Additional verification sampling indicated that the remaining concentrations of PCBs were below the 10 ppm cleanup level, with the exception of a small area underneath the existing storm sewer in the southwest corner of the excavation. The soil underlying the storm sewer in this area was removed by hand digging in order to preserve the existing storm sewer on the south side of the manhole. The soil was removed and containerized into two 55-gallon drums prior to the drums being emptied, crushed, and loaded with additional asphalt debris into a truck for disposal at WM's Autumn Hills Landfill on August 4, 2015. Verification samples collected underneath the existing storm sewer and fence footer indicated that PCB concentrations were below the 10 ppm cleanup level. The details of the remedial excavation are presented in the *Soil Containing PCB Cleanup Completion Summary Report* submitted to U.S. EPA, MDEQ, and the KCHD on November 13, 2015.

3.31.3 Current Status and Conclusions

Based on the results of the remedial activities and the Low Occupancy restriction for this area, no additional action related to this AOI is necessary.

3.32 AOI 28 – Additional Bulk Load and Unload Areas

3.32.1 Historical Operations

Several areas at the Site were formerly utilized for bulk unloading and loading of petroleum products and waste and raw materials. These areas included exterior load/unload fill ports and associated concrete pads, as well as former train wells, some of which were unpaved. Some of these areas have been replaced in the recent past; however, others have been in place since the facility was developed. There was no evidence of a release from other bulk load and unload areas at the Site to the environment.

3.32.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding other bulk load and unload areas.

3.32.3 Current Status and Conclusions

This AOI was initially identified in the CCR; however, limited information exists related to the specific locations or activities related to this AOI. Groundwater monitoring conducted at the Site has not identified impacts specifically related to this AOI. Additionally, due to the lack of evidence of a release from other bulk load and unload areas at the Site no additional action related to this AOI is necessary.

3.33 AOI 29 – Former Incinerators

Based on the review of historical drawings, two incinerators were formerly located on the Site, as discussed below.

3.33.1 AOI 29.1 – Former Incinerator Area No. 1

3.33.1.1 Historical Operations

Based on the review of available information, an incinerator was located to the south of the former Power House, to the east of the railroad tracks, and along the western property boundary in a 1954/1955 drawing in line with Row 42 of the former Main Manufacturing Building. It could not be determined from available documentation if these were all the same incinerator; however, available drawings/aerials located them in the same approximate area. No information regarding the nature of the materials burned in the incinerator or construction, operation or demolition dates of the incinerator was available. No additional details regarding the incinerator were available based on scale and quality of aerial images and availability of historical drawings.

3.33.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB112-11 was advanced in this area. Two soil samples were collected at 2 to 4 feet bgs and 12 to 14 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.33.1.

3.33.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.33.2 AOI 29.2 – Former Incinerator Area No. 2

3.33.2.1 Historical Operations

Based on the review of available information, an incinerator was located to the southwest of the former Baler House between Columns H and J, south of Row 40 (numbering did not extend that far south on the drawing). No information regarding the nature of the materials burned in the incinerator or construction, operation or demolition dates of the incinerator was available.

3.33.2.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the former incinerator due to the uncertainty of its actual former location.

3.33.2.3 Current Status and Conclusions

Based on the potential nature of the operations conducted at incinerator, the potential to impact the subsurface, the former incinerator is considered an AOI; however, due to limited information

regarding the location and operation of the incinerator and the lack of any observed evidence of impact in the general area of this incinerator during Site demolition no additional action related to this AOI is necessary.

3.34 AOI 30 – Elevator Pits

Hydraulic elevators were present at the Site. Additionally, one former elevator location was identified by Site personnel. The pits and associated sumps, if present, were not visually evaluated during the Site inspection. Signage observed in one of the elevators indicated that mineral spirits were to be used for lubrication on the chains. No information was available regarding historical releases to the subsurface from the elevator operations.

3.34.1 AOI 30.1 – Passenger Elevator

3.34.1.1 Historical Operations

A passenger elevator was located in the former office area near Column ZB, Row 5. A visual inspection of the pit beneath the elevator could not be conducted during the Site inspection.

3.34.1.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the passenger elevator pit.

3.34.1.3 Current Status and Conclusions

Removal of the elevator pistons was observed during demolition activities on March 7, 2012. No significant staining was noted on the concrete surface of the former elevator pit. No sump was observed to be present in the elevator pit; however, the presence of minor amounts of demolition debris limited a complete observation of the area. Due to the lack of reports or information regarding historical releases to the subsurface from the elevator operations and no observed evidence of impact related to the elevators during Site demolition and elevator removal, no additional action related to this AOI is necessary.

3.34.2 AOI 30.2 – Freight Elevator No. 1

3.34.2.1 Historical Operations

A freight elevator was located in plant area near Column O, Row 26. A visual inspection of the pit beneath the elevator could not be conducted during the Site inspection.

3.34.2.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the freight elevator pit.

3.34.2.3 Current Status and Conclusions

Removal of the elevator pistons was observed during demolition activities on December 7, 2011. Minor staining was observed on the concrete surface of the elevator shaft located near Column O, Row 26 at the time of removal; however, on-Site representatives indicated that the staining was

from the removal of the piston and was not present prior to removal. Due to the lack of reports or information regarding historical releases to the subsurface from the elevator operations and no observed evidence of impact related to the elevators during Site demolition and elevator removal, no additional action related to this AOI is necessary.

3.34.3 AOI 30.3 – Freight Elevator No. 2

3.34.3.1 Historical Operations

A freight elevator was located in the plant area near Column N, Row 45. A visual inspection of the pit beneath the elevator could not be conducted during the Site inspection.

3.34.3.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the freight elevator pit.

3.34.3.3 Current Status and Conclusions

Removal of the elevator pistons was observed during demolition activities on December 7, 2011. Standing oil was present in the pit of the former freight elevator. Additional oil was released into the concrete pit during the removal of the pistons. All oil was removed from the pit upon completion of piston removal and the pit was cleaned prior to backfilling with crushed stone. No evidence of significant cracks or staining, or a drop in the fluid level within the pit was observed by GHD. Due to the lack of reports or information regarding historical releases to the subsurface from the elevator operations and no observed evidence of impact related to the elevators during Site demolition and elevator removal, no additional action related to this AOI is necessary.

3.34.4 AOI 30.4 – Former Freight Elevator

3.34.4.1 Historical Operations

According to Site personnel, a former freight elevator was located in the plant area near Column S, Row 7. No further information was available.

3.34.4.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the former freight elevator pit.

3.34.4.3 Current Status and Conclusions

Due to the lack of reports or information regarding historical releases to the subsurface from the elevator operations and no observed evidence of impact related to the elevators during Site demolition, no additional action related to this AOI is necessary.

3.35 AOI 31 – Scrap Metal Storage Pad

3.35.1 Historical Operations

The Site utilized a concrete paved area with a trench drain to store dumpsters of scrap metal, which may have contained residual cutting fluids. The trench drain discharged below grade to the WWTP. Significant staining was noted on the concrete surface of the pad; however, the concrete appeared to be in good condition with no significant cracks or deterioration observed. No documentation was available that identified releases in this area that reached the subsurface.

3.35.2 Previous Investigations and Remedial Actions

During the 2012 Stage III Site-Wide Investigation SB213-12 and SB214-12 were advanced near the former scrap metal storage pad. Two soil samples were collected from SB213-12 at 0 to 2 feet bgs and 13 to 15 feet bgs. Two soil samples were collected from SB214-12 at 0 to 2 feet bgs and 12 to 14 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, Site-specific TAL Metals, and PCBs. A groundwater sample was also collected from SB214-12 through the borehole drill rods utilizing a stainless steel screen and expendable screen point and submitted to the analytical laboratory for analysis of TCL VOCs, TCL SVOCs, PCBs, and Site-specific TAL metals (dissolved). The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. The groundwater sample analytical results indicated the presence of PAHs at concentrations exceeding the Water Solubility Limits. In order to confirm or deny the presence of potential LNAPL, a permanent monitoring well (MW57-13) was installed in this location during the 2013 Site-Wide Investigation. Results of monitoring and sampling at MW57-13 have not indicated the presence of LNAPL. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.35. Temporary monitoring well groundwater sample analytical results are included in Table 3.2. Refer to Figure 3.2 for sample locations.

3.35.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.36 AOI 32 – Compactor

3.36.1 Historical Operations

The Site utilized a hydraulic compactor for general refuse. Staining was observed in the general area surrounding the compactor during the Site inspection.

3.36.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB114-11 was advanced in this area. Two soil samples were collected at 1 to 3 feet bgs and 17 to 19 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.36.

3.36.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.37 AOI 33 – Railroad Track Operations

3.37.1 Historical Operations

Railroad tracks were historically located throughout the Site and were historically utilized for the delivery of raw materials and the shipment of finished products. Site personnel were unaware of the nature of historical delivery of chemicals via railcar, and no documented or known releases of chemicals from the rail shipment activities have occurred. Site personnel indicated that no known dust suppression activities have occurred along the railroad tracks at the Site. Additionally, several railroad tracks are present to the west of the main manufacturing portion of the Site, between this area and the Clay Avenue Parking Lot. Railcars currently and historically are parked in this area for extended periods of time. In addition, railroad tracks that historically entered the Main Manufacturing Building were not paved, were lower in elevation than the production floor, and were filled and capped to production floor grade. No information regarding the nature of the fill materials was available. Waste railroad ties were historically stockpiled to the south of the former Main Manufacturing Building, along the eastern property line, on bare ground.

3.37.2 Previous Investigations and Remedial Actions

Six soil borings were advanced around the Site (SB115-11 through SB119-11) during the initial Site-Wide Investigation to evaluate current and historical railroad tracks across the Site. SB115-11 was advanced near the middle of a rail spur that entered the southeast corner of the former Main Manufacturing Building and ran north along the eastern building wall. Two soil samples were collected from 2 to 4 feet bgs and 20 to 22 feet bgs. SB116-11 was advanced approximately where the aforementioned rail spur entered the Main Manufacturing Building at the southeast corner. Two soil samples were collected from 2 to 4 feet bgs and 16 to 18 feet bgs. SB117-11 was advanced near the western wall of the former Main Manufacturing Building approximately in the location of a former railroad spur. Two samples were collected from 1 to 3 feet bgs and 18 to 20 feet bgs. SB118-11 was advanced to the south of the former Main Manufacturing Building entrance for the western rail spur located near the southwest corner of the former building. Two samples were collected from 0 to 2 feet bgs and 12.5 to 14.5 feet bgs. SB119-11 was advanced near the southern railroad spur that ran east in between the WWTP and the former Power House and Baler House. Two samples were collected from 0.5 to 2.5 feet bgs and 12 to 14 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.37.

3.37.3 Current Status and Conclusions

Based on the results of the investigation discussed above and the lack of observations of fill material (during demolition activities) specifically related to railroad operations, no additional action related to this AOI is necessary.

3.38 AOI 34 – Battery Charging Areas

3.38.1 Historical Operations

Satellite battery charging areas were located throughout the facility. Areas of deteriorated concrete, likely caused by battery acid, were observed beneath the battery charging areas; however, the deterioration was not observed to have penetrated the concrete to the subsurface in the visually accessible areas.

3.38.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the battery charging areas.

3.38.3 Current Status and Conclusions

Based on the nature of the operations conducted associated with the battery charging areas, the types of chemicals utilized during these operations and the potential to impact the subsurface, the battery charging areas were considered an AOI. Based on evidence that the concrete below the battery charging areas was intact and there was no evidence of impact to Site soils, no additional action related to this AOI is necessary.

3.39 AOI 35 – Process Infrastructure

3.39.1 Historical Operations

Various additional pits, trenches, and sumps were present throughout the Site. These either discharged to the process wastewater sewer system or were blind. Petroleum, solvent, and acidic products were utilized throughout the facility and staining was noted around several of these areas, as well as deterioration. The integrity of these units could not be determined at the time of the Site inspection due to the below grade construction.

3.39.2 Previous Investigations and Remedial Actions

During demolition and re-grading activities, the building concrete slab was removed and all subsurface structures were removed to a depth of approximately four feet below final grade. Stained or potentially impacted materials that were discovered by MCM were observed by GHD personnel and evaluated on whether or not sampling was required. Details of the sampling and remedial action undertaken during the demolition and re-grading activities is discussed in detail in the memorandum Summary of Sampling and Remedial Action Activities – 2011 and 2012 prepared by CRA as mentioned in Section 3.1.

3.39.3 Current Status and Conclusions

Based on the observations, sampling results, and remedial activities presented in the aforementioned memorandum, no additional action related to this AOI is necessary.

3.40 AOI 36 – Potential On-Site Fill Activities

3.40.1 Historical Operations

Based on the review of a historical aerial photograph taken between 1950 and 1954, an area of potential fill activities was identified to the south of the Main Manufacturing Building. No further information was available regarding the potential on Site fill activities.

3.40.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation three soil borings (SB120-11 through SB122-11) were advanced in this area. One sample was collected from SB120-11 at 1 to 3 feet bgs. Two soil samples were collected from SB121-11 at 1 to 3 ft. bgs and 17 to 19 feet bgs. Two soil samples were also collected from SB122-11 at 1 to 3 feet bgs and 17 to 19 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.40.

3.40.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.41 AOI 37 – Hazardous Waste Storage Areas

Based on review of available records, the Site submitted an initial Notification of Hazardous Waste Activity with U.S. EPA Identification No. MID0060204083 to the U.S. EPA in August 1980. According to the notification, the facility generated, treated, stored or disposed of hazardous wastes F010, F017, U238, and hazardous waste with toxic characteristics. The Site submitted a RCRA Hazardous Waste Part A Permit application to the U.S. EPA in November 1981. The facility reportedly operated various storage areas, as discussed below. It was reported that the treatment tanks and storage area contained only paint related waste (F017). However, it was subsequently determined that F017 listed waste was temporarily suspended from regulation under RCRA. Furthermore, the paint related waste was analyzed for hazardous waste characteristics and deemed nonhazardous. Therefore, in August 1982, GM filed a request for withdrawal of their Part A Permit. Withdrawal of the Part A Permit was approved by the U.S. EPA in a letter dated September 13, 1982 on the basis that wastes treated, stored or disposed at the facility were not defined as hazardous waste.

Hazardous waste was more recently stored for less than 90-days in a caged epoxy-sealed concrete area in the former Main Manufacturing Building, near Zb-13.

3.41.1 AOI 37.1 – Former Hazardous Waste Storage Areas – Main Plant

3.41.1.1 Historical Operations

The facility reportedly operated two hazardous waste treatment tanks inside the main plant building. It was reported that the treatment tanks contained only paint related waste (F017).

3.41.1.2 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation SB124-11 was advanced in this area. Two soil samples were collected at 1 to 3 feet bgs and 17 to 19 feet bgs. The soil samples were submitted to the analytical laboratory for analysis of TCL VOCs, PAHs, Site-specific TAL Metals, and PCBs. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.41.1.

3.41.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.41.2 AOI 37.2 – Former Hazardous Waste Storage Areas – South of WWTP

3.41.2.1 Historical Operations

The facility reportedly operated a zinc primer residue storage area located south of the plant. It was reported that the storage area was utilized for only paint related waste (F017).

3.41.2.2 Previous Investigations and Remedial Actions

SB125-11 was advanced near the former WWTP during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 13 to 15 feet bgs. The soil samples were submitted to the analytical laboratory and analyzed for TCL VOCs, PAHs, PCBs, and Site-specific TAL Metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.41.2.

3.41.2.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.41.3 AOI 37.3 – Former Hazardous Waste Storage Areas – Western Property Boundary

3.41.3.1 Historical Operations

A drawing with the Part A application indicated that drums of zinc primer were historically stored south of the former Main Manufacturing Building, along the western property boundary. It was reported that the storage area was utilized for only paint related waste (F017).

3.41.3.2 Previous Investigations and Remedial Actions

SB126-11 was advanced in this area during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 12.5 to 14.5 feet bgs. The soil samples were submitted to the analytical laboratory and analyzed for TCL VOCs, PAHs, PCBs, and Site-specific TAL Metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.41.3.

3.41.3.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.41.4 AOI 37.4 – Former Hazardous Waste Storage Area (most recent)

3.41.4.1 Historical Operations

Hazardous waste had more recently been stored for less than 90-days in a caged epoxy-sealed concrete area in the former Main Manufacturing Building, near Zb-13. This area had two blind containment sumps. No staining or deterioration was observed on the concrete in this area.

3.41.4.2 Previous Investigations and Remedial Actions

Based on the nature of the operations conducted associated with the former hazardous waste storage area, the types of chemicals utilized during these operations and the potential to impact the subsurface, this area was considered an AOI. However, based on the observed condition of the epoxy sealed concrete in this area, and lack of any recorded release of hazardous waste, it is unlikely that a release of hazardous chemicals to the subsurface would have occurred in this area.

3.41.4.3 Current Status and Conclusions

Based on the observations discussed above, no additional action related to this AOI is necessary.

3.42 AOI 38 – Switch House Operations

The Site has operated two known switch houses throughout the operational timeframe of the facility, which may have historically utilized PCB-containing electrical equipment. These are further discussed below.

3.42.1 AOI 38.1 – Former Switch House

3.42.1.1 Historical Operations

A former Switch House was identified on a 1936 drawing, between Rows 1 and 2 1/2, and was located under the former Main Manufacturing Building. A 4-inch drain tile around the structure that discharged to the storm sewer was shown in the drawing. There were three floor drains in the switch house and these drains discharged to a 3 foot by 3 foot by 4 foot sump that also discharged

to the storm sewer. No information regarding any releases from electrical equipment previously operated in this area was available.

3.42.1.2 Previous Investigations and Remedial Actions

SB127-11 was advanced in the area of the former Switch House during the initial Site-Wide Investigation. Soil samples were collected from 1 to 3 feet bgs and 20 to 22 feet bgs. The soil samples were submitted to the analytical laboratory and analyzed for TCL VOCs, PAHs, PCBs, and Site-specific TAL Metals. The soil sample analytical results did not indicate any exceedance of Nonresidential DCC or Nonresidential PSIC. Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.42.1.

3.42.1.3 Current Status and Conclusions

Based on the results of the investigation discussed above, no additional action related to this AOI is necessary.

3.42.2 AOI 38.2 – Current Switch House

3.42.2.1 Historical Operations

Electricity for the Site is supplied by Consumers, who leases a portion of the Site for a substation and Switch House on the Site. The substation consists of a fenced gravel area with electrical equipment on concrete pads/footings, if appropriate. The electrical equipment in the substation was not observed to be labeled as to PCB content. Access to the Consumers portion of the Switch House, which is shared with the Site, was not available. Floor drains were observed in the Switch House. Staining was noted on the gravel surface beneath one of the transformers in the substation. The Switch House consists of an exterior switch yard, which is a fenced area with gravel paving. The majority of the equipment in the switch yard appeared to be labeled as non PCB. No staining was observed in the switch yard area.

3.42.2.2 Previous Investigations and Remedial Actions

No investigations or remedial actions have been conducted regarding the Switch House.

3.42.2.3 Current Status and Conclusions

Based on the nature of the operations conducted associated with the Switch House, the types of chemicals typically utilized during these operations, the lack of information regarding the exterior historical storage areas, and the potential to impact the subsurface, the Switch House was considered an AOI. However, as the historic and current operator of the Substation, Consumers would be considered responsible for the investigation and potential remediation of any releases related to their operation of the current Switch House. Therefore, no additional action related to this AOI is necessary.

3.43 AOI 39 – PCB Areas

3.43.1 AOI 39.1 – PCB Area No. 1

3.43.1.1 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation, PCBs were identified in a soil sample collected at 1 to 3 feet bgs from SB61-11 at a concentration above the High Occupancy Area Cleanup Level of 1 ppm/1 mg/kg for bulk remediation waste (without further conditions) set forth in 40 CFR 761.61(a) of TSCA regarding the characterization and remediation of PCB remediation waste. Subsequent investigations were conducted in September 2011 and April 2012 to delineate the impacted areas. A Self-Implementing Plan (SIP) was submitted to the U.S. EPA in June 2012 to address investigation and remediation of the areas. The SIP was approved on August 6, 2012. On August 22, 2012, remediation of soil containing PCBs was completed by excavation and transported for off-Site disposal.

3.43.1.2 Current Status and Conclusions

A cleanup completion summary report (referenced in Section 3.1), including a copy of the SIP, was submitted to the U.S. EPA and includes additional details regarding the remediation and verification sample results.

Based on the results of the remedial action discussed in the completion report, no additional action related to this AOI is necessary.

3.43.2 AOI 39.2 – PCB Area No. 2

3.43.2.1 Previous Investigations and Remedial Actions

During the initial Site-Wide Investigation, PCBs were identified in a soil sample collected at 1 to 3 feet bgs from SB124-11 at a concentration above the High Occupancy Area Cleanup Level of 1 ppm/1 mg/kg for bulk remediation waste (without further conditions) set forth in 40 CFR 761.61(a) of TSCA regarding the characterization and remediation of PCB remediation waste. Subsequent investigations were conducted in September 2011 and April 2012 to delineate the impacted areas. A SIP was submitted to the U.S. EPA in June 2012 to address investigation and remediation of the areas. The SIP was approved on August 6, 2012. On August 22, 2012, remediation of soil containing PCBs was completed by excavation and transported for off Site disposal.

3.43.2.2 Current Status and Conclusions

A cleanup completion summary report (referenced in Section 3.1), including a copy of the SIP, was submitted to the U.S. EPA and includes additional details regarding the remediation and verification sample results.

Based on the results of the remedial action discussed in the completion report, no additional action related to this AOI is necessary.

3.44 AOI 40 – On-Site Fill Area (Zc Area)

3.44.1 Historical Operations

On June 16, 2012, an area of visually impacted fill was observed near Column Zc, Row 5.5 to Row 7. This area was located beneath the 1978 addition to the western portion of the former Main Manufacturing Building. Prior to the expansion of the former Main Manufacturing Building, this area historically consisted of former railroad tracks. CRA mobilized to the Site to observe the material and potentially collect samples for laboratory analysis. The material was observed to be comprised of cinders, slag, fly ash, sand, and coal fragments.

3.44.2 Previous Investigations and Remedial Actions

Based on the observed conditions, CRA collected a soil sample (Seam – Zc 5.5 to Zc 7) from the stained material. The soil sample was submitted to the analytical laboratory for analysis of VOCs, SVOCs, PCBs, and Site-specific TAL metals.

Lead was detected above the Nonresidential DCC. Chromium and manganese were detected above the Nonresidential PSIC. Arsenic, barium, cadmium, chromium, cobalt, copper, molybdenum, nickel, silver, zinc, and TCE were detected above the GSIPC. These compounds have not been identified in groundwater samples collected in monitoring wells at concentrations above the GSIC in the immediate vicinity of this area or the Cole Drain.

The extent of this fill material was not completely delineated during regrading activities, as it was not necessary to remove it to meet the on-going redevelopment requirements. The area was further evaluated during implementation of the next stage of the Site Wide Investigation completed in October 2012.

An Excavation Work Plan submitted to the MDEQ, and approved on March 12, 2015, outlined the details of the delineation, waste characterization, and remediation scope-of-work developed to remove and dispose of soil exhibiting exceedances of Nonresidential DCC and Nonresidential PSIC. Modifications to the original scope of work (SOW) presented in the Work Plan were submitted to MDEQ via email on May 13, 2015 and subsequently approved on May 26, 2015. The original Work Plan included the removal of soils impacted above the Nonresidential DCC and Nonresidential PSIC to a depth of 4 feet bgs. The implementation of this SOW would have left some Nonresidential DCC and Nonresidential PSIC exceedances at deeper depths in the Zc and Bulk Unload Areas between 4 and 8 feet bgs, which were anticipated at the time to be addressed via a RC. The modifications included in the email request related to the Zc Area are outlined below:

- In the Zc Area, SB242-13 had lead and PAHs above the Nonresidential DCC, and chromium (total) and manganese above the Nonresidential PSIC at 4 to 6 feet bgs. Additionally, SB242-13 had lead above the Nonresidential DCC, and chromium (total) and manganese above the Nonresidential PSIC at 6 to 8 feet bgs. RACER proposed to remove this material.
- In the Zc Area, SB251-13 had chromium (total) above the Nonresidential PSIC at 4 to 6 feet bgs. RACER proposed to remove this material.

- In the Zc Area, SB299-13 had lead above the Nonresidential DCC, and chromium (total) and manganese above the Nonresidential PSIC at 4 to 8 feet bgs. RACER proposed to remove this material.
- In the Zc Area, SB245-13 had PAHs above the Nonresidential DCC at 4 to 6 feet bgs. RACER proposed to remove this material.

Excavation of contaminated soil present in the Zc area commenced on June 26, 2015. Between June 26 and June 30, 2015, approximately 963 tons of soil and debris were excavated and loaded directly for transportation and disposal. Verification samples were collected from the sidewalls of the excavation and submitted to the analytical laboratory for analysis of PAHs, lead, manganese, and trivalent and hexavalent chromium. Sample results indicated that Nonresidential DCC and Nonresidential PSIC exceedances for metals were still present at two sidewall sample locations and additional excavation would be required.

Between July 7, 2015 and July 9, 2015 approximately 186 tons of additional soil was excavated for disposal from the southwest corner and eastern portion of the excavation area. Three additional sidewall samples were collected and analyzed for the same parameters and the results indicated that all contaminant concentrations were below applicable Nonresidential DCC and Nonresidential PSIC. Results of the final verification sample results and extents of the excavation are presented on Figure 3.7. Copies of the analytical laboratory reports are provided in Appendix D and in the Soil Containing PCB Cleanup Completion Summary Report prepared by GHD dated November 13, 2015. The final excavation extent and depth was surveyed prior to commencing backfilling.

Prior to backfilling, a demarcation layer consisting of non-woven geotextile was placed on the floor of the excavation and orange safety fence was placed on the sidewalls of the excavation. The excavation was backfilled with general fill in 1 to 2-foot lifts and compacted with a vibratory roller. Field compaction testing was completed between each lift to confirm the fill had a minimum of 90% of the maximum modified Proctor density. Following the placement of general fill, a 2-inch layer of gravel was placed over the excavation to restore the area to the previous grade.

3.44.3 Current Status and Conclusions

Based on the results of the remedial excavation activities conducted, a single isolated sample location at SB297-13 from 8 to 10 feet bgs contains a concentration of lead that exceeds the Nonresidential DCC and a concentration of manganese and chromium that exceed the Nonresidential PSIC. The sample location information is included in the current RC (see Figure 3.5) and no additional action related to this AOI is necessary.

4. Current Conditions and Mitigation

Based on the current extent of soil contamination, the applicable criteria/pathways for evaluation discussed in Section 3, and remedial activities completed to date, the following risks related to soil required additional mitigation:

- Nonresidential DCC exceedance at sample location SB195-12
- Nonresidential DCC and PSIC exceedances at sample location SB297-13

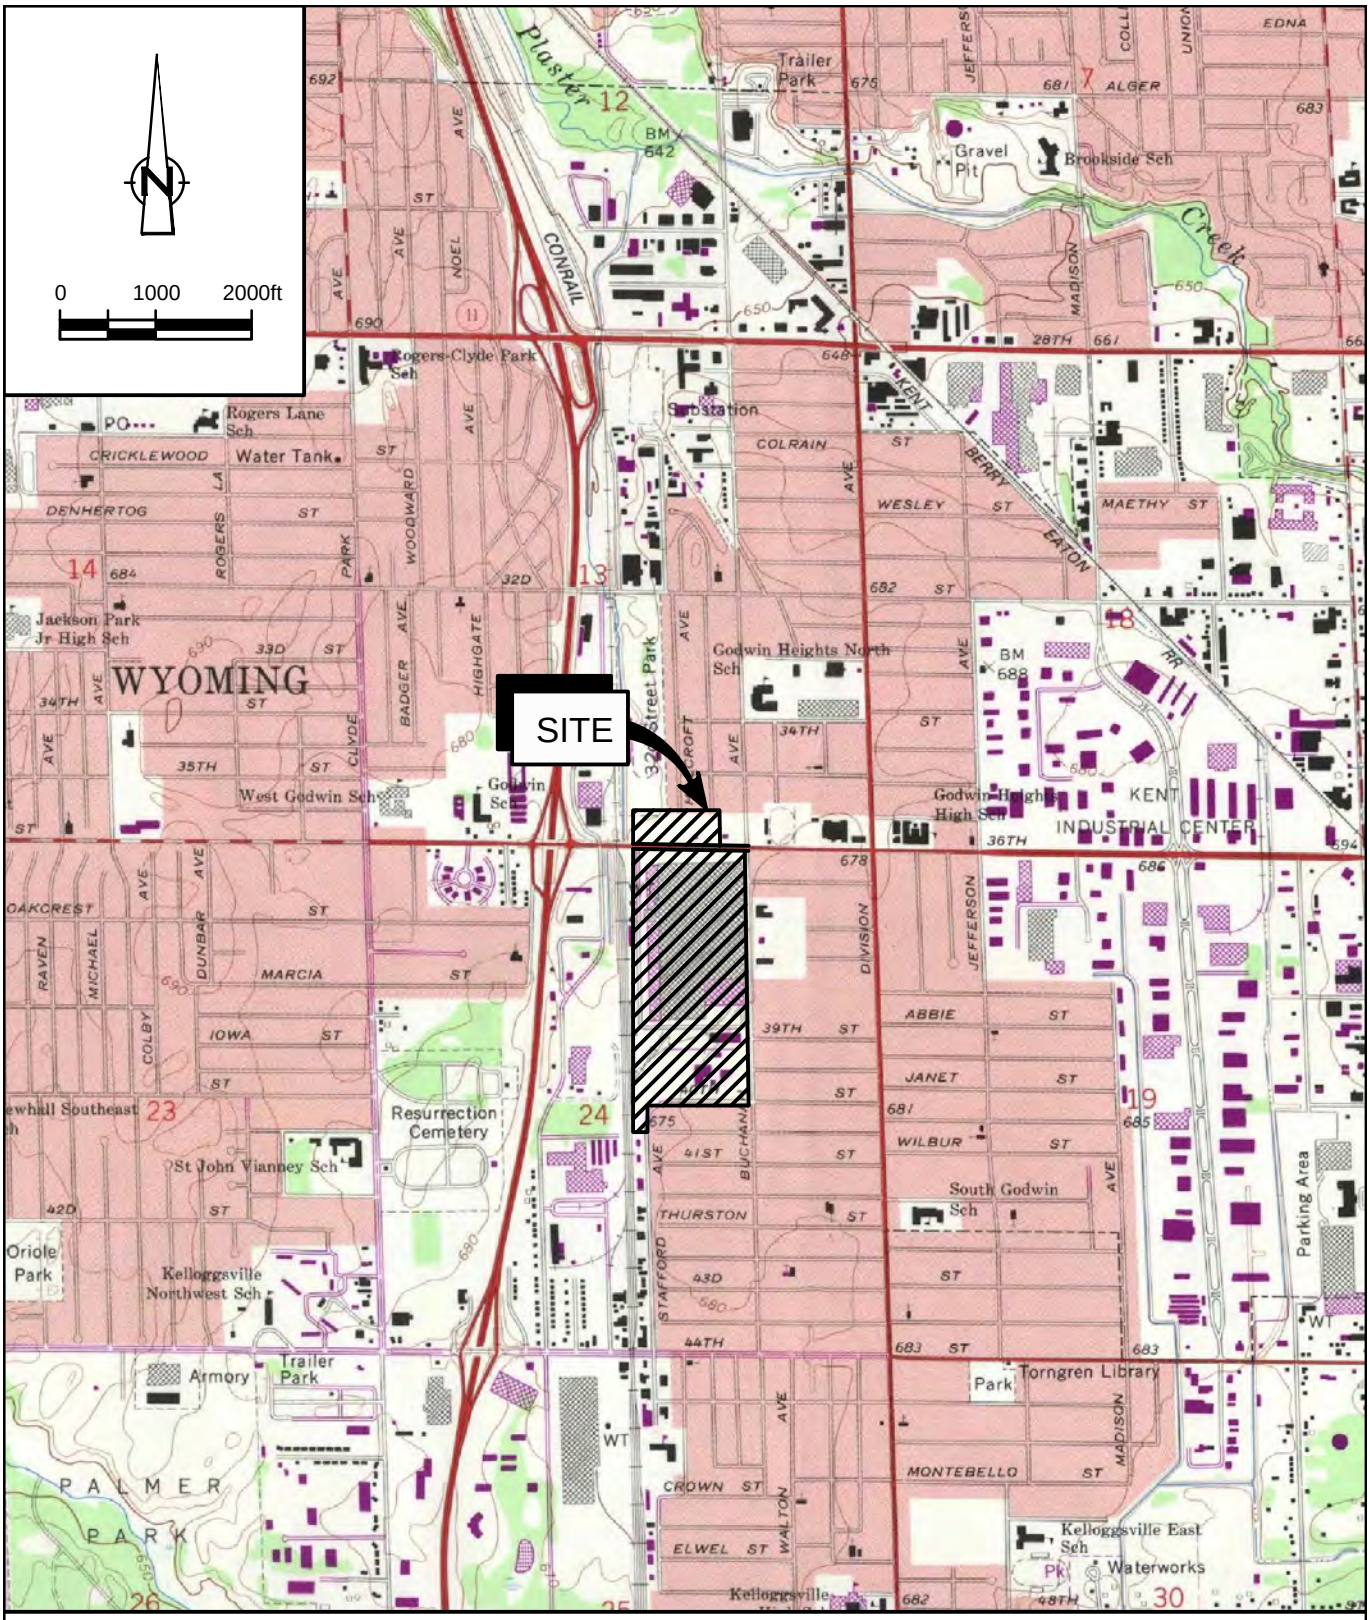
The RC identifies these locations and effectively mitigates any potential unacceptable exposure through the restrictions prescribed in the RC.

- Based on the current extent of groundwater contamination, the applicable criteria/pathways for evaluation discussed in Section 3, and remedial activities completed to date, the following risks related to groundwater required additional mitigation:
- Exceedances of Nonresidential DWC at multiple locations on-Site

The RC for the Site restricts the use of groundwater resources at, in, or under the Property and effectively mitigates any potential unacceptable exposure through the restrictions prescribed in the RC.

Soil sample analytical results compared to Part 201 Criteria are presented in Table 3.44.

5. Post-Closure Plan



The Post-Closure Plan consists of the DRC, which is presented in Appendix A.

Former Grand Rapids Metal Plant
Wyoming, Michigan

AOI Number	AOI Description	Media	Evaluation Completed	Target Criteria Exceeded[1]	Response Activities Conducted	Work Plan/Data Report Key Reference[2]

Notes:
VOCs - Target Compound List Volatile Organic Compounds
NRDCC - Nonresidential Direct Contact Criteria
NRPSIC - Nonresidential Particulate Soil Inhalation Criteria
PAHs - polycyclic aromatic hydrocarbons
PCB - polychlorinated biphenyls
RC - restrictive covenant
[1] Target criteria for soil are NRDCC and NRPSIC and target criteria for groundwater are GSIC, Water Solubility and C_{sat}; as identified in Section 3.4 of the report text. Other Generic Criteria are addressed through the Ordinance or Draft RC.

Notes:

[1] Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.

[2] Carbonate Hardness of 344 mg/L was used to calculate Groundwater Surface Water Interface Criteria.

U - Not detected at the associated reporting limit.

J - Estimated concentration.

UJ - Not detected; associated reporting limit is estimated.

R - Rejected.

-- Parameter was not analyzed.

ID - Insufficient data to develop criterion.

NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.

NLL - Hazardous substance is not likely to leach under most soil conditions.

NLV - Hazardous substance is not likely to volatilize under most conditions.

- Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

[1] Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Total Petroleum Hydrocarbons (C20-C34)	ug/L	--	--	--	--	--	--	--	--

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Notes:

(1) Cleanup Criteria Requirements for Response Activity, Administrative Rules R299.1 to R299.50 effective December 30, 2013, pursuant to Part 201 of 1994 PA 451 as amended.
U - Not detected at the associated reporting limit.
J - Estimated concentration.
UJ - Not detected; associated reporting limit is estimated.
R - Rejected.
-- Parameter was not analyzed.
ID - Insufficient data to develop criterion.
NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.
NLL - Hazardous substance is not likely to leach under most soil conditions.
NLV - Hazardous substance is not likely to volatilize under most conditions.
☐ - Exceeds Generic Cleanup Criteria. Superscript letter notes the criterion exceeded.

Methylene chloride	ug/L	5.0 U	1.0 U	--	5.0 U	5.0 U	5.0 U	5.0 U	5.0 U
Styrene	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Tetrachloroethene	ug/L	1.3	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Toluene	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
trans-1,2-Dichloroethene	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
trans-1,3-Dichloropropene	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Trichloroethene	ug/L	0.52 J	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Trichlorofluoromethane (CFC-11)	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Trifluorotrichloroethane (CFC-113)	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Vinyl chloride	ug/L	1.0 U	1.0 U	--	1.0 U	1.0 U	1.0 U	1.0 U	1.0 U
Xylenes (total)	ug/L	3.0 U	3.0 U	--	3.0 U	3.0 U	3.0 U	3.0 U	3.0 U
Semi-Volatile Organic Compounds (SVOCs)									
2,2'-Oxybis(1-chloropropane) (bis(2-Chloroisopropyl) ether)	ug/L	5.4 U	0.50 U	--	5.0 U	5.0 U	5.0 U	5.0 U	5.0 U
2,4,5-Trichlorophenol	ug/L	5.4 U	0.50 U	--	5.0 U	5.0 U	5.0 U	5.0 U	5.0 U
2,4,6-Trichlorophenol	ug/L	5.4 U	0.50 U	--	4.0 U	5.0 U	5.0 U	5.0 U	5.0 U
2,4-Dichlorophenol	ug/L	5.4 U	0.50 U	--	10 U	10 U	10 U	0.50 J	5.0 U
2,4-Dimethylphenol	ug/L	5.4 U	1.0 U	--	5.0 U	5.0 U	5.0 U	5.0 U	5.0 U
2,4-Dinitrophenol	ug/L	5.4 U	5.0 U	--	5.0 U	5.0 U	5.0 U	3.9 J	5.0 U
2,4-Dinitrotoluene	ug/L	5.4 U	0.50 U	--	5.0 U	5.0 U	5.0 U	5.0 U	5.0 U
