☐ Information for file

Information for file: The sulfuric acid spill went into the firewall and did not run off site. Because the spill did not endanger the health or safety of the public, cause significant adverse impact to the land, water, or air environment, or cause severe damage to property, it is not considered an emergency condition. The facility did notify within 24 hours of the spill and also submitted a written notification to the Department within seven (7) days. Therefore, no further action is anticipated at this time.
