WWTP	Wastewater Treatment Plant

1.0 INTRODUCTION

Conestoga-Rovers & Associates (CRA) was retained by General Motors Corporation (GM) to conduct a Phase I Environmental Site Assessment (ESA) for a portion of the Clark Avenue Facility located at 2860 Clark Avenue in Detroit, Michigan. The purpose of the Phase I ESA was to identify potential areas of environmental concern (PAOC). PAOCs are areas where there may have been a release of contaminants into the environment at levels that could adversely impact human health or the environment, based on the following objective criteria; (i) written records regarding a release; or (ii) knowledge of a release reported by GM personnel; or (iii) currently visible evidence of a release associated with a route into the environment. A Site location map is provided on Figure 1.1. The Site is defined as the area of the Clark Avenue Facility which was designated for redevelopment as Parcel B (Site). Figure 1.2 presents a Site Plan of the area being reviewed under this Phase I ESA.

The Site is part of a larger property which was known as the GM Clark Avenue Facility. The GM Clark Avenue Facility was headquarters of the GM Cadillac Motor Car Division until that function was re-located in 1993. The overall GM Clark Avenue Facility, including the Site, is currently being re-developed as an industrial park.

The Phase I ESA has been conducted in accordance with GM Specifications and general accordance with ASTM Standard E1527-95 for conducting environmental assessments. The assessment of the Site included visual observations of the property and adjacent facilities, an environmental database search and historical records review, review of available aerial photography, and interviews with key employees of GM. The following tasks were conducted during this assessment:

- review of federal and state environmental databases and historical records;
- review of past and current property usage and adjacent property occupancy;
- review of available aerial photography;
- inspection of the Site demolition, and records for the Site;
- observations of any conditions that represented potential environmental concerns;
- review of historic raw material usage and storage and spill/release incidents;
- review of the historic compliance status of any environmental permits and registrations;
- review of historic waste handling, accumulation, storage, and disposal practices;
- review of historic wastewater discharges;

- review of the historic use of equipment that potentially contained polychlorinated biphenyls (PCBs);
- review of the historic use of potential asbestos-containing materials (ACM); and
- review of aboveground and underground storage tank records.

CRA accepted information obtained from GM employees as accurate unless written documentation or field observations contradicted it.

This report summarizes the information gathered by CRA during the Phase I ESA and identifies PAOCs associated with the Site. PAOCs have been identified through the following methods:

i) review of documentation for the Site;
ii) re-evaluation of environmental areas of interest identified during historic investigations at the Clark Avenue Facility; and
iii) inspection of environmental conditions during Site demolition and concrete slab removal.

This Phase I ESA has been prepared for the use of GM, and may not be relied upon by any other party without written concurrence from CRA.

2.0 ENVIRONMENTAL DATABASES SEARCH AND HISTORICAL RECORDS REVIEW

2.1 ENVIRONMENTAL DATABASES SEARCH

CRA contracted Environmental Risk Information and Imaging Services (ERIIS) to conduct a search of federal and state environmental databases. The Site is defined as a portion of the GM Clark Avenue Facility located at 2860 Clark Avenue, designated as Parcel B. Based on the address of the Site, the database searches were completed to assist in the identification of conditions at the Site and within a radius distance specified in ASTM Standard E1527-95, ranging from less than ¼ mile to 1 mile. The ERIIS Report is included as Appendix A. The following databases were searched with the findings as noted:

2.1.1 FEDERAL DATABASES

1. National Priority List (NPL) - The NPL, also known as the Superfund List, is a United States Environmental Protection Agency (USEPA) listing of uncontrolled or abandoned hazardous waste sites. The list is primarily based on a score that a Site receives from the USEPA's Hazardous Ranking System. These Sites are targeted for possible long-term remedial action under the Superfund Act of 1980.

   FINDING: The Site was not reported to be on the NPL. The GM Clark Avenue Facility was not reported to be on the NPL. No adjacent sites were reported to be on the NPL. One site within a 1-mile radius of the Site was reported to be on the NPL, this being Carter Industrials, Inc. located at 4690 Humboldt Street. The Carter Industrials, Inc. Site is currently undergoing Remedial Action. The Remedial Action involved the excavation and off-Site disposal of PCB-impacted soils at the Site and off-Site cleanup of storm water sewers which had been identified to contain PCB-contaminated sediments.

   CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

2. Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) - The CERCLIS List is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated or are currently under investigation by the USEPA for the release or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation and may ultimately be placed on the NPL. In addition to site events and milestone dates, the CERCLIS List contains financial information from the SCAP. As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" have been removed from the CERCLIS List.

   FINDING: The Site was not reported to be on the CERCLIS List. The GM Clark Avenue Facility was not reported to be on the CERCLIS List. No sites within a half-mile radius of the Site were reported to be on the CERCLIS List.

   CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

3. No Further Remedial Action Planned (NFRAP) Sites Report - The NFRAP Sites Report, also known as the CERCLIS Archive, contains information pertaining to sites which have been removed from the USEPA's CERCLIS Database. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

   FINDING: The Site was not reported to be listed in the NFRAP Sites Report. The GM Clark Avenue Facility was not reported to be in the NFRAP Site Report. No sites within a half-mile radius of the Site were reported to be listed in the NFRAP Sites Report.

   CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

4. Resource Conservation and Recovery Information System - Treatment, Storage and Disposal Facilities (RCRIS-TS) Report - The RCRIS-TS Report contains

information regarding those facilities that either treat, store or dispose of USEPA regulated hazardous waste. The following information also is included in the RCRIS-TS Report: information regarding the status of facilities tracked by the Resource Conservation and Recovery Act (RCRA) Administrative Action Tracking System (RAATS); inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on site.

FINDING: The Site is a portion of the GM Clark Avenue Facility, which was reported to be in the RCRIS-TS Report (see Section 3.2.8 for discussion). No sites within a 1-mile radius of the Site were reported to be listed in the RCRIS-TS Report.

CONCLUSION: The Site is a portion of the GM Clark Avenue Facility, which was reported in the database search to be listed in the RCRIS-TS Report. Specific discussion regarding waste disposal is presented in Section 3.2.8.

5. Resource Conservation and Recovery Information System - Large Quantity Generators (RCRIS-LG) Report - The RCRIS-LG Report contains information regarding facilities that either generate more than 1,000 kilograms (kg) of USEPA regulated hazardous waste per month or meet other applicable requirements of RCRA. The following information also is included in the RCRIS-LG Report: information regarding the status of facilities tracked by the RAATS; inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

FINDING: The Site was not reported to be listed in the RCRIS-LG Report. The GM Clark Avenue Facility was not reported to be listed in the RCRIS-LG Report. No adjacent sites were reported to be listed in the RCRIS-LG Report. The

following sites within a ¼-mile radius of the Site were reported to be listed in the RCRIS-LG Report:

Facility	*Address*
City of Detroit Fire Engine 10	3396 Vinewood Street
Tompkins Products	1040 West Grand Boulevard

CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

6. Resource Conservation and Recovery Information System - Small Quantity Generators (RCRIS-SG) Report - The RCRIS-SG Report contains information regarding facilities that either generate between 100 kg and 1,000 kg of USEPA regulated hazardous waste per month or meet other applicable requirements of RCRA. The following information also is included in the RCRIS-SG Report: information regarding the status of facilities tracked by the RAATS; inspections and evaluations conducted by Federal and State Agencies; all reported facility violations, the environmental statutes violated and any proposed and actual penalties; information pertaining to corrective actions undertaken by the facility or the USEPA; and a complete listing of USEPA regulated hazardous wastes which are generated or stored on-site.

FINDING: The Site was not reported to be listed in the RCRIS-SG Report. The GM Clark Avenue Facility was not reported to be listed in the RCRIS-SG Report. No adjacent sites were reported to be listed in the RCRIS-SG Report. The following sites within a ¼-mile radius of the Site were reported to be listed in the RCRIS-SG Report:

Facility	*Address*
Shrader Ralph Division Dri-Slide	3450 Lovett Street
G and G Collision	3058 Junction Street
Wester Manufacturing Company	3428 Scotten Street
Detroit Edison Company Detroit Group	4141 Magnolia Street
Dewitt Products	5860 Plumer Street
Magni Industries, Inc.	2771 Hammond Street
Shrader Analytical and Consulting Labs, Inc.	3814 Vinewood Street

CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

7. Emergency Response Notification System - ERNS is a national computer database system that is used to store information on the sudden and/or accidental release of hazardous substances, including petroleum, into the environment. The ERNS reporting system contains preliminary information on specific releases including the spill location, the substance released and the responsible party. The information in the ERNS Report pertains only to those releases that occurred between 1987, and 1993, January 1, 1994 to July 14, 1994 and 1995.

   FINDING: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the ERNS for releases which occurred in June 1992, February 1991, August 1990 and September 1990 (see Section 3.2.14 for discussion).

   CONCLUSION: The Site is a portion of the GM Clark Avenue Facaility, which was reported in the database search to be in the ERNS Report. Specific discussion regarding spills is presented in Section 3.2.14.

8. Toxic Release Inventory (TRI) System of 1992 - The 1992 TRI Report contains information on the industrial release and/or transfer of toxic chemicals as reportable under Title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA Title III).

   FINDING: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the 1992 TRI Report for the release of hydrochloric acid, sulfuric acid, cyanide compounds, nickel compounds, copper compounds and chlorine (see Section 3.2.14 for discussion). No adjacent sites were reported to be listed in the 1992 TRI Report. The following sites within a 1-mile radius of the Site were reported to be listed in the 1992 TRI Report:

Facility	*Address*	*Chemicals Released*
Secodyne Inc.	3255 Goldner Street	Acrylamide, Formaldehyde
Magni Ind. Inc.	2771 Hammond Street	Xylenes, Zinc, Nickel, n-Butyl Alcohol

CONCLUSION: The Site is a portion of the GM Clark Avenue Facility, which was reported in the database search to be in the 1992 TRI Report. Specific discussion regarding spills is presented in Section 3.2.14.

9. Civil Enforcement Docket - Docket is the USEPA's System for tracking judicial cases filed on the USEPA's behalf by the Department of Justice. The Docket Report contains information on cases from 1972 to the present.

FINDING: The Site was not reported to be listed in the Docket Report. The GM Clark Avenue Facility was not reported to be in the Docket Report. No adjacent sites were reported to be listed in the Docket Report. The following sites within a one-mile radius of the Site were reported to be listed in the Docket Report:

Facility	*Address*	*Disposition*
Detroit City	2633 Michigan Avenue	Not Reported
Midwest Suspension & Brake	3411 West Fort Street	Consent Decree With Penalty

CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

2.1.2 STATE DATABASES

1. Michigan Environmental Contamination (Act 451, Part 201; formerly Act 307) List - The Michigan Environmental Contamination List contains summary information pertaining to sites that are deemed potentially hazardous by the Michigan Department of Environmental Quality (MDEQ).

FINDING: The Site was not reported to be on the Michigan Environmental Contamination List. The GM Clark Avenue Facility was not reported to be on the Michigan Environmental Contamination List. No adjacent sites were

reported to be on the Michigan Environmental Contamination List. The following sites within a one-mile radius of the Site were reported to be on the Michigan Environmental Contamination List:

Facility	*Address*
Welcome Center Ambassador Prop	1428 21st Street
Rockwell Former	West Fort Street At Clark Street
Ambassador Bridge Customs	Howard Street At 21st Street

CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

2. Michigan Facility and Tank Data Report - The Michigan Facility and Tank Data Report is a comprehensive listing of all registered active and inactive underground storage tank (USTs) located within the State of Michigan.

FINDING: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the Michigan Facility and Tank Data Report for having removed 39 USTs. Specific discussion related to on-Site USTs is included in Section 3.2.3. The following sites within a ¼-mile radius of the Site were reported to be listed in the Michigan Facility and Tank Data Report:

Facility	*Address*	*Number of USTs*	*Status*
F&H Mini Mart, Inc.	4615 Michigan Avenue	2	In Use
		2	Closed
R&M Shearing & Processing	4086 Michigan Avenue	1	Temporarily Out of Use
Royal Cleaners	4701 Michigan Avenue	2	In Use
		2	Temporarily Out of Use
United Meat & Deli	3273 Hubbard Street	2	In Use
Amoco Oil #7074	3458 Junction Street	3	Closed
Detroit Fire Dept. #10	3396 Vinewood Street	1	In Use
Automotive Replacement/Auto Ware	3540 Vinewood Street	2	In Use

Facility	*Address*	*Number of USTs*	*Status*
Marvin Nelson	829 West Grand Blvd.	3	Removed
		4	In Use

CONCLUSION: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the Michigan Facility and Tank Data Report. Section 3.2.3 presents specific discussion of Site-related issues.

3. Michigan Leaking Underground Storage Tank (LUST) Report - The Michigan LUST Report, consisting of listings maintained by the Michigan Department of Environmental Quality and the Michigan Department of State Police, is a comprehensive listing of all reported active and inactive LUSTs located within the State of Michigan.

FINDING: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the Michigan LUST Report (see Section 3.2.3 for discussion). No adjacent sites were reported to be listed in the Michigan LUST Report. The following sites within a ½-mile radius of the Site were reported to be listed in the Michigan LUST Report:

Facility	*Address*
F&H Mini Mart	4615 Michigan Avenue
Nelson Standard Service	829 West Grand Boulevard
Dewitt Products Company	5860 Plumer Street
BP Oil	4400 West Vernor Highway
Jerry Churchhill, Inc.	2455 24th Street
Dave's Mini Mart	3801 West Vernor Highway

CONCLUSION: The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in Michigan LUST Report. Section 3.2.3 presents specific discussion of Site-related issues.

4. Michigan Solid Waste Facilities (SWF) Report - The Michigan SWF Report is a comprehensive listing of all inactive and active solid waste landfills and processing facilities located within the State of Michigan.

FINDING: The Site was not reported to be listed in the Michigan SWF Report. The GM Clark Avenue Facility was not reported to be in the Michigan SWF. No sites within a half-mile radius of the Site were reported to be listed in the Michigan SWF Report.

CONCLUSION: No concerns exist at the Site based on the ERIIS database search.

2.2 HISTORICAL RECORDS REVIEW

2.2.1 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps assist in the identification of historic land use and commonly indicate the existence and location of aboveground and underground storage tanks, structures, improvements and facility operations. Sanborn Maps were reported to be available for the Site and were reviewed by CRA for the years 1884, 1897, 1921, 1951, 1988, and 1991. Copies of the available Sanborn Maps are presented in Appendix B.

The 1884 Sanborn Map indicated that the Site was occupied by residential dwellings. The Site was bordered to the east by Scotten Avenue, and beyond by residential dwellings, and the William W. Dwight & Company, wholesale lumber and hardwood dealers. The Site was bordered to the south by railroad tracks, and beyond by residential dwellings and a varnish works, including a kiln. The Site was bordered to the west by Clark Avenue, and beyond by the Detroit Car Wheel Company and the Michigan Car Company, including several foundries, sheds, dry kilns, car timber piles, a blacksmith shop, a wood machine shop, a repair shop, and a metal shavings conveyor and storage area. The land use of the property north of the Site was not indicated on the map.

The 1897 Sanborn Map indicated that the Site was occupied by the Michigan Peninsular Car Company and its lumber yard, residential dwellings, an engine house, several stores, and Standard Oil Company. The Site was bordered to the west by Clark Avenue

and the remainder of the Michigan Peninsular Car Company. The remaining adjacent land use was not indicated on the map.

The 1921 Sanborn Map indicated that the Site was occupied by a portion of the Cadillac Motor Car Company which consisted of an assembly building, a car storage and service stock building and several bunk houses. Additional stores, residential dwellings, garages, a filling station, and a gasoline tank were also indicated to be present on the northeast portion of the Site; however, Standard Oil Company was no longer indicated to be present. The adjacent property to the west of the Site was occupied by other portions of the Cadillac Motor Car Company, including a powerhouse, a heat treat building, and a machine shop. The remaining adjacent land use was not indicated on the map.

The 1951, 1988, and 1991 Sanborn Maps indicated that the Site was occupied by a portion of the General Motors Corporation Cadillac Motor Car Division. The buildings and operations located on the Site included auto experimental buildings, a salvage building, an assembly building, offices, several paint dip tanks and a car storage and service stock building. The adjacent property was occupied by other portions of the GM Cadillac Motor Car Division, including factory buildings, oil storage areas, a power house, an engineering building, machine shops, and several foundries.

CONCLUSION: Based on the review of Sanborn Maps, the Site has been used for industrial purposes since the late 1800's.

2.2.2 PROPERTY TITLE SEARCH

CRA contracted Milliken & Michaels Credit Services to conduct a search of property title records and other documents (lease agreements, easements, etc.), dated from at least 1940 (or the date of the first recorded deed) to the present, associated with ownership or occupation of the Central Areas of the GM Clark Avenue Facility. The title search was prepared for a larger property than that which is defined in this Phase I ESA as the Site, and is therefore not included in this report.

Based on the title search conducted, the majority of the Site has been owned by GM since the early 1900's.

2.2.3 AERIAL PHOTOGRAPHS

Aerial photographs from the years 1937, 1949, 1952, 1956, 1961, 1966, 1970, 1972, 1975, 1981, 1985, 1990, and 1995 were reviewed to determine the historic uses of the Site and to identify activities and land uses at surrounding properties which may have impacted the Site. The following information was interpreted from the review of available aerial photographs. Selected aerial photographs are presented in Appendix C.

The 1937 aerial photograph identified the area around the Site to be a combination of residential, commercial, and industrial property. The Site was occupied by what appeared to be the GM Clark Avenue Facility buildings and several large parking lots. The Site appeared to be bordered by industrial property to the east; industrial property and Conrail Railroad to the south, and commercial, residential and industrial property beyond the Grand Trunk Western Railroad and Michigan Avenue to the north and northwest. One industrial property north of the crossing of the Grand Trunk Western Railroad and Michigan Avenue appeared to have a series of eight above ground storage tanks located at the northeast corner of the property.

The remaining aerial photographs showed minimal changes in Site buildings and parking lots until 1990, when demolition of building structures was observed. Surrounding property use was a consistent mixture of residential, industrial, and commercial. In the 1985 photograph, the eight aboveground storage tanks observed on the industrial property north of the Site appeared to have been removed.

CONCLUSION: Based on the review of the identified aerial photographs, the majority of the Site has been used for industrial purposes since the 1930's.

3.0 SITE REVIEW

A demolition and re-development program is currently underway at the GM Clark Avenue Facility, located at 2860 Clark Avenue in Detroit, Michigan, including the Site area. All aboveground structures at the Site have been demolished and removed. The demolition of the concrete floor slab, and associated sub-grade concrete structures, was substantially completed in December 1996. This Site review is based on Site conditions encountered in the period from September 1996 to December 1996 and includes a review of information from GM files; and PAOCs identified during demolition activities.

The Site review is presented in the following sections:

Section 3.1	Historical Site Assessments
Section 3.2	Review of Site Records/Site Inspection
Section 3.3	CRA Evaluation of Historical Environmental Areas of Interest Identified by Previous Investigations
Section 3.4	Potential Areas of Concern Identified During Demolition Oversight Activities

3.1 HISTORICAL SITE ASSESSMENTS

3.1.1 USEPA PRELIMINARY ASSESSMENT AND VISUAL SITE INSPECTION

In October and November 1991, the United States Environmental Protection Agency (USEPA) conducted a Preliminary Assessment (PA) and Visual Site Inspection (VSI) of the Clark Avenue Facility. The PA/VSI included a review of the history and operations, inspection of current conditions, and summary of environmental concerns. The PA/VSI identified Solid Waste Management Units (SWMUs) and Areas of Concern (AOCs) (as identified by USEPA in the PA/VSI), at the Clark Avenue Facility. Eleven SWMUs and no AOCs were identified by the USEPA at the Clark Avenue Facility. Of the 11 SWMUs, six were located within the Site Area, as follows:

i) SWMU 5: Copper and Nickel Reclaim Tank

This unit consisted of an open-top, below-grade steel tank located inside the building that housed the automobile bumper plating processes. This tank was used to facilitate the reclamation of nickel and copper plating solutions. Copper reclamation, which occurred infrequently, involved filling the tank with a plating bath containing excess copper. While in the tank, copper was plated out of the solution and pumped to a tanker truck for reclamation off Site. The remaining solution was pumped from the tank to the wastewater treatment plant. Diversion of rinse water from the nickel plating line containing concentrated levels of nickel also occurred in the tank. The rinse water remained in the tank until it was pumped to a tanker truck and sent off Site for reclamation or use as a raw material. Shipments of the rinse water containing nickel occurred approximately four times a year.

The unit managed copper-containing plating baths and nickel-containing rinse waters. The tank was located inside a building that had paved floors. A hood was located above the tank to capture any mist or vapors generated during its operation. The area under and surrounding the tank had interceptor floor drains that drained to the wastewater treatment plant.

No releases from this unit were identified during the PA/VSI.

ii) SWMU 6: Cyanide Drum Rinsing Station

This unit consisted of a below-grade concrete pit adjacent to a bumper plating line. A metal grate covered both the pit and an adjacent below-grade mixing tank associated with the plating line. New cyanide-bearing plating solutions were poured from drums into a mixing tank associated with the plating line. After a drum was emptied into the mixing tank, employees positioned the drum over the pit and cleaned the drum by rinsing it with water. The rinse water entered the pit and was conveyed to the wastewater treatment plant.

The unit managed cyanide-bearing rinsewater.

No releases from this unit were identified during the PA/VSI.

iii) SWMU 7: Paint Sludge Dewatering Filter

This unit consisted of a vacuum filter attached to painting equipment (paint booths) and was used to generate sludge from influent paint wastewaters. The vacuum filter and painting equipment were located inside Building 5A.

The vacuum filter was dismantled and removed in 1988 when painting operations ended at the Site. The unit managed wastewaters from painting operations.

No releases from this unit were identified during the PA/VSI.

iv) SWMU 8: Blue-Surf Incinerator

This unit was an incinerator that was utilized to incinerate dried paint collected off fixtures (e.g., cages or baskets) that held parts while they were being painted. Paint accumulated on the fixtures over time and was removed to allow reuse of the fixtures. This unit was historically located in Building 5A.

GM dismantled and removed the incinerator in 1988.

No releases from this unit were identified during the PA/VSI.

v) SWMU 10: Satellite Accumulation Area

There was a satellite accumulation area inside the building that housed the electroplating processes. Several empty containers that had held plating solutions were identified during the VSI.

The unit was located inside the building that housed the bumper plating operations. All building drains and sumps in this area were connected to the wastewater treatment plant.

No releases from this unit were identified during the PA/VSI.

vi) SWMU 11: Air Scrubber Collection Bin and Dumpster Boxes

SWMU 11 consisted of a portable metal bin associated with an air scrubber and dumpster boxes located outside the building. The bin and scrubber were located inside the building that housed the bumper plating operations. The scrubber collected fine metal particles generated during the buffing and grinding of bumpers. The scrubber deposited the dust in the metal bin. The scrubber dust was transferred to covered dumpster boxes adjacent to the former container storage area. The dumpster boxes were situated on an asphalt parking lot.

The unit managed non-hazardous air scrubber sludge.

The scrubber and associated collection bins were inside the building that housed the bumper operation. All building drains and sumps were connected to the wastewater treatment plant. The dumpster boxes were covered.

No releases from this unit were identified during the PA/VSI.

3.2 REVIEW OF SITE RECORDS/SITE INSPECTION

The Phase I ESA presented in this report is based upon Phase I ESA Site inspection activities completed by CRA during the period from September 1996 to December 1996, concrete slab removal oversight activities (i.e., during concrete floor slab removal) completed by CRA during the period from July 1996 to December 1996, and a detailed review of records for the Site.

3.2.1 SITE OVERVIEW

The Site is located in a mixed residential, commercial, and industrial area of Detroit, Michigan (see Figure 1.1). The Site is comprised of approximately 24 acres of industrial zoned land formerly owned by GM.

The Site was part of the headquarters of the GM Cadillac Motor Car Division until 1993. The Site was used by GM as a portion of an automobile assembly plant including painting, parts plating, receiving docks, and administrative offices.

Between 1988 and 1989, a total of 19 buildings were demolished at the Clark Avenue Facility. The remaining 39 buildings were removed in the final phase of demolition that began in 1995 and continued until early 1996. Final demolition of the concrete floor slab and associated concrete structures was generally complete by December 1996. Re-development of the Former Clark Avenue Facility is ongoing.

3.2.2 ENVIRONMENTAL SETTING

A. Setting

The Site is located in a mixed residential, commercial, and industrial area of Detroit, Michigan. The Site is zoned for industrial purposes. The Site is currently covered with any remaining concrete floor slab or crushed granular concrete (recycled on Site). Access to the Site is available from Michigan Avenue onto Clark Avenue.

The Site is bordered on the east and west sides by industrial zoned property historically owned and operated by GM, and on the north and south by additional industrial property and residential areas. No adverse impact to the Site from adjacent businesses or properties was observed by CRA during Site visits.

Aerial photographs were reviewed for the Site for several different years between 1937 and 1995. The aerial photographs show the various states of construction and demolition of Site buildings. The photos from 1990 and 1995 show the progressive demolition of Site buildings. No potential on-Site fill areas were observed in any of the aerial photographs.

Portions of the Clark Avenue Facility were built prior to 1920. Over the years the plant had significantly increased in size. Adjacent areas which had been utilized for residential, commercial, or industrial purposes had been acquired and incorporated into the Facility operations. Review of records indicated that past activities around the Site

have included an ink plant, die cast operation, milk can factory, tanning house, foundry, "job shop" plater, and a paint company.

B. Building Description

All above grade on-Site structures had been completely demolished at the initiation of this Phase I ESA. Demolition of the concrete floor slab was substantially complete by December 31, 1996.

C. Zoning

The Site is in a portion of Detroit, Michigan which is zoned for industrial activities. Industrial activities have been ongoing at the Site from at least the mid-1800s.

The Site is located in a Federal Empowerment Zone targeted for significant inner-city re-development. Re-development construction activities are currently ongoing on portions of the Former Clark Avenue Facility.

D. Site Soils

The Site is located in the City of Detroit, Wayne County, Michigan in an area typified by flat lake plain sediments. Surface soils of the area are identified as the Pewamo-Blount-Metamore association, which is identified to contain nearly level poorly drained soils. On-Site soils include engineered fill and some sandy or silty deposits which directly overlies the regionally extensive lacustrine clay plain of southeastern Michigan.

E. Geology

The overburden is comprised of a relatively thin layer of fill or silty sand which overlies a regionally extensive lacustrine clay plain.

F. Hydrogeology

Surficial groundwater in this area of Wayne County is generally considered to be perched water (i.e., groundwater not in an "aquifer" pursuant to Act 451). This is due to the fact that the groundwater zone is discontinuous and has only a limited yield.

The natural flow direction for this perched water is to follow surface topography with direct discharge to surface water features such as ditches, streams, or rivers. Utility trenches, including storms and sanitary sewers will serve to artificially collect perched water where present.

The lacustrine clay layer serves as an effective aquitard to the downward migration of any perched groundwater.

3.2.3 UNDERGROUND STORAGE TANKS (USTS)

Review of files and reports indicated that all USTs have been removed from the Site. The Michigan Department of Environmental Quality – Underground Storage Tank Division (MDEQ – USTD) reported in June 1996 that 39 registered USTs had been removed from the GM Clark Avenue Facility. Since the environmental deactivation of assembly operations at the Site began in 1987, a total of 6 known USTs have been removed from the Site and disposed. Table 3.1 contains a list of these tanks with GM Identification numbers, capacity, contents, and reported date of removal. Figure 3.1 presents the historic UST locations on the Site.

According to MDEQ-USTD files, there has been one confirmed leaking UST release adjacent to the Site area. The release was associated with a historic area of environmental interest known as the Scotten Avenue Area, discussed in Section 3.3.2.

Based on the information reviewed during this Phase I ESA, the Scotten Avenue Area is a PAOC, as discussed in Section 3.3.2.

3.2.4 ABOVEGROUND STORAGE TANKS (ASTS)

Review of files and reports indicated that all ASTs have been removed from the Site. Since the environmental deactivation of assembly operations at the Site began in 1987, a total of 10 ASTs have been removed from the Site and disposed. Table 3.2 contains a list of these ASTs with GM Identification numbers, capacity, contents, and reported date of removal. Figure 3.2 presents the historic AST locations.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to ASTs.

3.2.5 UTILITY SERVICES

Process and potable water were supplied to the Site by the City of Detroit [Detroit Water and Sewer Department (DWSD)]. No evidence of water wells were noted in the review of information and the use of groundwater wells is prohibited by City ordinance.

Sanitary and treated process wastewaters were discharged to sanitary sewer outfalls at McKinstry Street, Clark Avenue, and Scotten Avenue. Process wastewaters were treated at a GM-operated wastewater treatment facility south of the Site prior to sewer discharge. No evidence of a septic system was noted in the review of information.

Electricity is provided by The Detroit Edison Company (Detroit Edison). Natural gas is provided to the Site by Michigan Consolidated Gas Company (Michcon).

3.2.6 RAW MATERIAL USE AND STORAGE

Based on information contained in records, a wide variety of raw materials have been historically used and stored on Site. These materials include plating compounds, paints, thinners, acids, caustics, sealants, adhesives, boiler treatment materials, and various petroleum products including diesel fuel, gasoline, fuel oils, coolants, and hydraulic oils. The majority of the raw materials associated with the Site had historically been received in bulk, via tanker truck or rail car, and in various-sized containers. Raw

materials received in bulk were stored in the on-Site ASTs or USTs. Contents of USTs and ASTs are summarized in Tables 3.1 and 3.2, respectively.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to raw material use and storage.

3.2.7 SOLID WASTE

Based on Site records reviewed during the Phase I ESA, solid waste generated at the Site consisted of general office wastes, metal shavings, scrap metal, and miscellaneous packaging materials. The records indicate that solid waste was disposed of at various landfill facilities throughout Michigan and Ohio.

No records or evidence of on-Site solid waste disposal was found by CRA in the records.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to solid waste.

3.2.8 HAZARDOUS WASTE

The Site is a portion of the GM Clark Avenue Facility, which was assigned EPA ID# MID005356704 as a RCRA Transportation, Storage and Disposal Facility in the RCRA Information System database. The GM Clark Avenue Facility began operating as a RCRA Large Quantity Generator in 1987, accumulating wastes for no more than 90 days. The former RCRA container storage pad was located on the property adjacent to the Site on the west. A Closure Certification was submitted to the MDEQ-Waste Management Division (WMD) in December 1996 and approved. A copy of the Closure Certification approval is included as Appendix D.

The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the RCRIS-TS database, as discussed in Section 2.1. Seven facility violations were reported from January 1985 to December 1992. Based on information reviewed, all violations have been resolved.

Based on the information reviewed there are no PAOCs on-Site related to hazardous waste.

3.2.9 POLYCHLORINATED BIPHENYLS (PCBS)

A comprehensive PCB maintenance and inspection program was conducted at the Site by Clark Avenue Facility staff. All PCB capacitors were removed from the Site and properly disposed before demolition of the buildings. Figure 3.3 presents the number of PCB capacitors by historic building location, according to plant files. GM files indicate that no PCB transformers existed on the Site.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to PCBs.

3.2.10 ASBESTOS-CONTAINING MATERIAL (ACM)

Industrial Environmental Consultants prepared a comprehensive ACM survey, dated August 9, 1991. TolTest, Inc. conducted a second survey in 1994 and the results were incorporated into the Site asbestos abatement program which was implemented prior to demolition.

Prior to demolition activities, all ACM was reported to be properly abated and disposed.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to ACM.

3.2.11 INDUSTRIAL WASTEWATER/SANITARY SEWERS

The Site was serviced by the Detroit Water and Sewerage Department (DWSD). Industrial wastewater and sanitary sewer systems were present at the Site. Sanitary wastewater consisted of domestic wastewater generated by Site sinks and toilets.

Industrial wastewater consisted of general and oily wastewaters generated throughout the facility.

Sources of industrial wastewater discharge included roof drain discharges, wash bays, wash tanks, and floor drains. Since its construction in 1970, the wastewater treatment plant (WWTP) located southwest of the Site treated all industrial wastewater generated at the Site prior to the permitted discharge to the DWSD sewer system through three sewer discharge outfalls. The WWTP was capable of treating general and oily wastewaters generated throughout the Site.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to wastewater or sewers.

3.2.12 STORMWATER

Stormwater from the roofs of Site structures was directed through roof drains and downspouts to exterior Site surfaces or through underground piping to the storm sewer system. Stormwater runoff from exterior Site surfaces flowed into on-Site catch basins which discharged to the wastewater treatment facility. The stormwater run-off was then treated along with the industrial process wastewater before discharge to the DWSD sewer system (Permit No. 004-086).

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to stormwater issues.

3.2.13 IONIZING RADIATION

No record of radon gas testing exists in the files. The USEPA has determined the City of Detroit to be in a Level 3 radon zone. The predicted indoor screening levels of radon gas are expected to be less than 2 pCi/L.

According to GM files, no man-made sources of radiation were reported to be used on Site.

Based on the information reviewed during this Phase I ESA, there are no PAOCs on Site related to ionizing radiation.

3.2.14 SPILLS/RELEASES

The Site is a portion of the GM Clark Avenue Facility, for which a spill reporting and minimization effort was maintained. A review of records indicated that spills at the GM Clark Avenue Facility for the time period of 1978 through 1992 were documented.

The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the 1992 TRI Report for the release and/or transfer of hydrochloric acid, sulfuric acid, cyanide compounds, nickel compounds, copper compounds, and chlorine. The TRI Report did not identify any specific location for the releases and/or transfers; however, several of these constituents were related to Site activities, specifically the historic plating area.

The Site is a portion of the GM Clark Avenue Facility, which was reported to be listed in the ERNS database for a release of gasoline in June 1992, cyanide waste water in February 1991, gasoline in August 1990, and stoddard solvent in September 1990. The ERNS Report did not identify any specific location for the releases; however, based on Site activities and review of Site records, these releases did not occur on Site.

Based on the information reviewed during this Phase I ESA, there is one PAOC on Site related to spills or releases, this being the historic plating area operations. The location of the historic plating area is presented on Figure 3.4. Section 3.3.3 presents a summary of the historic plating area.

3.2.15 CERCLA LIABILITY POTENTIAL

The Site or the GM Clark Avenue Facility is not listed on the NPL or in the Docket database; therefore, this area is not a PAOC.

3.3 CRA EVALUATION OF SELECTED HISTORICAL ENVIRONMENTAL AREAS OF INTEREST IDENTIFIED BY PREVIOUS INVESTIGATIONS

CRA reviewed information provided by GM on each of the following areas, which were historically identified as areas of environmental interest:

1) C-10 Dock Area;
2) Scotten Avenue Area; and
3) Plating Area.

The location of these historic areas of environmental interest is presented on Figure 3.4.

3.3.1 C-10 DOCK AREA

This section presents a summary of information from GM files regarding the C-10 Dock Area. The C-10 Dock Area Plan is presented on Figure 3.5.

3.3.1.1 ENVIRONMENTAL HISTORY OF C-10 DOCK AREA

The C-10 Dock Area was a former loading dock and the location of two USTs (GM #112 and #121) which were installed in 1984 for the storage of paint thinners. Each tank had a capacity of 10,000 gallons and was encased in a vault of natural clay, below 2 to 6 feet of fill at the surface.

The USTs were removed in August 1988, and evidence of leakage was reported at that time. An initial assessment of soil and groundwater was conducted.

3.3.1.2 SUBSURFACE INVESTIGATION

The investigation included the installation of eight soil borings and two monitoring wells. Soil boring and monitoring well locations are presented on Figure 3.6. Soil and water samples were collected and analyzed for parameters associated with the paint thinners previously stored in the tanks.

A. Soil Investigation

Twelve soil samples were collected from eight soil boring locations. No parameters were detected above the Michigan Act 451, Part 201/Part 213 Generic Industrial Direct Contact Values.

B. Water Investigation

Water samples were collected from borings C-10-1 and C-10-2 and analyzed for selected volatile organic compounds (VOCs) and naphthalene. No parameters were detected in water samples above Michigan Act 451, Part 213 Tier 1 Groundwater Direct Contact Criteria.

3.3.1.3 CURRENT STATUS

GM conducted a groundwater monitoring and perched water removal program in the Scotten Avenue and C-10 Dock Area. The groundwater monitoring and perched water removal program consisted of the removal and disposal of water from three recovery wells at the facility. Two of the recovery wells, RW-1 and RW-2, were located in the vicinity of the C-10 Dock Area. The approximate locations of RW-1 and RW-2 are presented on Figure 3.6.

The analytical data collected during previous investigations indicates that the soil and perched water in the C-10 Dock Area has not been impacted in excess of the Michigan Act 451, Part 201 or Part 213 Direct Contact Values. MDEQ-USTD does not have a confirmed release on record for the C-10 Dock Area. RW-1 and RW-2 were abandoned by removal in September 1996.

3.3.1.4 CONCLUSIONS

Based upon the information reviewed and summarized in this Phase I ESA, the C-10 Dock Area is not identified as a PAOC.

3.3.2 SCOTTEN AVENUE AREA

This section presents a summary of information from GM files regarding the Scotten Avenue Area. The Scotten Avenue Area Plan is presented on Figure 3.7.

The environmental issues in the Scotten Avenue Area are associated with USTs located east of the Site (i.e., within the area immediately east of Scotten Avenue). A review of conditions within the Scotten Avenue Area is required because of the potential for subsurface contamination to have migrated westerly into Parcel B.

3.3.2.1 ENVIRONMENTAL HISTORY OF SCOTTEN AVENUE AREA

GM reported a confirmed release of a regulated substance at the Scotten Avenue Area to the Michigan State Police, Fire Marshal Division (MSP-FMD), on July 2, 1992. The release was in the area of the UST pump house and was assigned Incident Number C-997-92. The release was discovered during a hydrostatic pressure test of the underground piping from the UST pump house to Building 29 (as shown on Figure 3.7). The piping system supplied premium unleaded gasoline to pumps located at Building 3 and Building 29.

3.3.2.2 INITIAL ABATEMENT

In response to the discovery of the release, an Initial Abatement (IA) Report was submitted to the MDNR on July 22, 1992 (currently MDEQ-USTD). The initial abatement Scope of Work consisted of the following:

- monitoring the Site for potential fire and safety hazards;
- disconnecting the potentially leaking underground piping, draining all remaining product, and sealing the connection;
- completing test trenches to locate the underground piping; and
- installing a temporary monitoring well on the east side of Scotten Avenue to allow the interim removal of potential free product and the collection of groundwater samples.

4.0 SUMMARY OF IDENTIFIED PAOCs

Based on the Phase I ESA including the Site inspection, information provided by GM representatives and regulatory agencies, documents reviewed, the environmental database searches, and demolition oversight activities, the following list of PAOCs has been identified for the Parcel B Site, General Motors Clark Avenue Facility, Detroit, Michigan.

i) **PAOC B-1 (PAOC #20, Building 29):** During Site demolition activities a 900-square foot area of black stained sand and clay was uncovered.

ii) **PAOC B-2 (PAOC #21, Building 29):** Site demolition activities revealed a 2,250-square foot area of black, stained sand and clay.

iii) **PAOC B-3 (PAOC #22, Building 3-H):** Site demolition activities revealed a 28,000-square foot area of black stained sand and clay.

iv) **PAOC B-4 (PAOC #23, Building 3-H):** During Site demolition activities a 2,375-square foot area of black stained sand and clay was discovered.

v) **PAOC B-5 (PAOC #24, Building 3-H):** A 2,750-square foot area of black, stained sand and clay was discovered during Site demolition activities.

vi) **PAOC B-6 (PAOC #25, Building 3-H):** During Site demolition activities black, stained sand and clay was discovered over a 2,750-square foot area.

vii) **PAOC B-7 (PAOC #26, Building 6/6-C):** Site demolition activities revealed 25,550-square foot area of black stained sand and clay.

viii) **PAOC B-8 (PAOC #27, Building 3-H):** Site demolition activities uncovered 1,200-square feet of black stained clay with an oily sheen and gasoline-like odor.

ix) **PAOC B-9 (PAOC #28, Building 29):** A 3,750-square foot area of black stained clay with a garbage-like odor was uncovered during Site demolition activities.

x) **PAOC B-10 (PAOC #29, Buildings 3-B/3-C):** A 500-square foot area of black stained foundry sand was discovered during Site demolition activities.

xi) **PAOC B-11 (PAOC #30, Building 3-B/Court 3-D):** Site demolition activities uncovered black stained foundry sand over an 800-square foot area.

xii) **PAOC B-12 (PAOC #31, Truck Space):** During Site demolition activities a 325-square foot area of blue/green stained sand and clay was discovered in the area of a historic 20,000-gallon UST, which contained antifreeze.

xiii) **PAOC B-13 (PAOC #32, Building 5-A):** Site demolition activities revealed a 600-square foot area of black stained sand and blue stained clay.

xiv) **PAOC B-14 (Scotten Avenue Area PAOC):** Past activities in the Scotten Avenue Area have indicated the presence of impacted soils.

xv) **PAOC B-15 (Plating Area PAOC):** Records indicate that spills and releases were reported in the former plating area. Additional evaluation is required in this area.

A summary of identified PAOCs is included as Table 4.1. Figure 4.1 presents the identified PAOC locations.

All of Which is Respectfully Submitted,
CONESTOGA-ROVERS & ASSOCIATES

ERIIS DISCLAIMER

The information contained in this report has been obtained from publicly available sources and other secondary sources of information produced by entities other than Environmental Risk Information & Imaging Services (ERIIS). Although great care has been taken by ERIIS in compiling and checking the information contained in this report to insure that it is current and accurate, ERIIS disclaims any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence or otherwise, and for any consequences arising therefrom. The data provided hereunder neither purports to be nor constitutes legal or medical advice. It is further understood that ERIIS MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND, INCLUDING, BUT NOT LIMITED TO, THE WARRANTIES OF FITNESS FOR A PARTICULAR PURPOSE OF MERCHANTABILITY, NOR ANY SUCH REPRESENTATIONS OR WARRANTIES TO BE IMPLIED WITH RESPECT TO THE DATA FURNISHED, AND ERIIS ASSUMES NO RESPONSIBILITY WITH RESPECT TO CUSTOMER'S, ITS EMPLOYEES', CLIENTS', OR CUSTOMERS' USE THEREOF. ERIIS SHALL NOT BE LIABLE FOR ANY SPECIAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES RESULTING, IN WHOLE OR IN PART, FROM CUSTOMER'S USE OF THE DATA. Liability on the part of the Environmental Risk Information & Imaging Services (ERIIS) is limited to the monetary value paid for this report. The report is valid only for the geographical parameters specified on the cover page of this report, and any alteration or deviation from this description will require a new report. This report does not constitute a legal opinion.

ERIIS REPORT OVERVIEW

The following features are available for an ERIIS report:

* Database Report
    * Statistical Profile
    * Database Records
* Related Maps
    * Digital Custom Plotted Map
    * Sanborn Fire Insurance Map(s)
    * Topographical Map(s)

Statistical Profile

The statistical profile is an at-a-glance numeric summary of the databases searched for your ERIIS Report.

Database Records

The detailed federal and state database information indicates potential and actual environmental threats within the study radius. These records are sorted by their distance from the study site.

Digital Custom Map

The digital custom map is cross referenced with the database records. The cross-in-circle in the center of the map represents the study site. The red circles represent distances from the study site. The plottable sites in the report are distinguished on the map by symbols of different shape and color.

Historic Fire Insurance Maps

The ERIIS collection of historical Sanborn Fire Insurance Maps covers 14,000 cities and towns. These maps may indicate prior use of the study site. If no maps are available for the study site, a notice to that effect is included. This notice should serve as evidence of due diligence.

Topographical Map

USGS topographical maps show natural and man-made features as well as the shape and elevation of the terrain. The 7.5 minute quad maps are produced at a scale of 1:24,000, or one inch represents 2,000 feet.

			6	16	49	256	327

Radon Zone Level: 3

Zone 3 has a predicted average indoor screening level < 2 pCi/L

A Radon Zone should not be used to determine if individual homes need to be tested for radon. The EPA's Office of Radiation and Indoor Air (202/233-9320) recommends that all homes be tested for radon, regardless of geographic location or the zone designation in which the property is located.

**A property is defined as a .05 mile buffer around the site's latitude and longitude.

A blank radius count indicates that the database was not searched by this radius per client instructions.

NR in a radius count indicates that the database cannot be reported by this search criteria due to insufficient and/or inaccurate addresses reported by a federal/state agency.

Date of Data: 05/01/1996
Release Date: 05/13/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8881

National Priorities List

The NPL Report, also known as the Superfund List, is an EPA listing of uncontrolled or abandoned hazardous waste sites. The list is primarily based upon a score which the site receives from the EPA's Hazardous Ranking System. These sites are targeted for possible long-term remedial action under the Superfund Act of 1980.

RCRIS_TS
Date of Data: 05/10/1996
Release Date: 06/10/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
202/260-4610

Resource Conservation and Recovery Information System - Treatment, Storage, And Disposal Facilities

The RCRIS_TS Report contains information pertaining to facilities which either treat, store, or dispose of EPA regulated hazardous waste. The following information is also included in the RCRIS_TS Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties
- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

CERCLIS
Date of Data: 05/01/1996
Release Date: 05/13/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8730

Comprehensive Environmental Response, Compensation, and Liability Information System

The CERCLIS Database is a comprehensive listing of known or suspected uncontrolled or abandoned hazardous waste sites. These sites have either been investigated, or are currently under investigation by the U.S. EPA for the release, or threatened release of hazardous substances. Once a site is placed in CERCLIS, it may be subjected to several levels of review and evaluation, and ultimately placed on the National Priorities List (NPL). As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from the CERCLIS Database.

NFRAP
Date of Data: 05/01/1996
Release Date: 05/13/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
703/603-8881

No Further Remedial Action Planned Sites

The No Further Remedial Action Planned Report (NFRAP), also known as the CERCLIS Archive, contains information pertaining to sites which have been removed from the U.S. EPA's CERCLIS Database. NFRAP sites may be sites where, following an initial investigation, either no contamination was found, contamination was removed quickly without need for the site to be placed on the NPL, or the contamination was not serious enough to require federal Superfund action or NPL consideration.

RCRIS_LG
Date of Data: 05/10/1996
Release Date: 06/10/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
202/260-4610

Resource Conservation and Recovery Information System - Large Quantity Generators

The RCRIS_LG Report contains information pertaining to facilities which either generate more than 1000kg of EPA regulated hazardous waste per month, or meet other applicable requirements of the Resource Conservation And Recovery Act. The following information is also included in the RCRIS_LG Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties
- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

RCRIS_SG

Release Date: 06/10/1996
US Environmental Protection Agency
Office of Solid Waste and Emergency Response
202/260-4610

Resource Conservation and Recovery Information System - Small Quantity Generators

The RCRIS_SG Report contains information pertaining to facilities which either generate between 100kg and 1000kg of EPA regulated hazardous waste per month, or meet other applicable requirements of the Resource Conservation And Recovery Act. On advice of the U.S. EPA, ERIIS does not report so-called "RCRA Protective Filers." Protective Filers, commonly called Conditionally Exempt Small Quantity Generators (CESQG's), are facilities that have completed RCRA notification paperwork, but are not, in fact, subject to RCRA regulation. The determination of CESQG status is made by the U.S. EPA. The following information is also included in the RCRIS_SG Report:
- Information pertaining to the status of facilities tracked by the RCRA Administrative Action Tracking System (RAATS)
- Inspections & evaluations conducted by federal and state agencies
- All reported facility violations, the environmental statute(s) violated, and any proposed & actual penalties

- Information pertaining to corrective actions undertaken by the facility or EPA
- A complete listing of EPA regulated hazardous wastes which are generated or stored on-site

SITE DESCRIPTION: The Carter Industrial Inc Site Is A Former Industrial Scrap Metal Yard Covering Approximately 3 1/2 Acres In Detroit From 1971 To 1986 The Metal Salvaging Operation Handled A Wide Variety Of Materials That Included Electrical Transformers & Capacitors Containing Polychlorinated Biphenyl (pcb)-contaminated Oil Oil Was Drained From The Transformers & The Copper Component Was Removed For On-site Processing The Facilities Included Furnaces For Melting Aluminum & Copper A Brick Warehouse & An Office Building Numerous Piles Of Scrap Metal & Equipment Were Lying Uncovered Throughout The Yard In 1984 A Fire Broke Out In An Area Of Wooden Pallets & Scrap Iron Mounds During An Investigation By The Michigan Dept Of Natural Resources & The City Fire Marshall Oil Was Found Near The Fire Area & Near The Base Of Three Large Tr*ansformers The Soil Was Sampled & Found To Contain Pcbs During Another Investigation In 1986 He State Found Barrels Of Used Pcb-contaminated Oil In & Around Scrap Metal Piles Oil Leaking From The Barrels Contained As Much As 50% Pcbs

SITE RESPONSIBILITY: This Site Is Being Addressed Through Federal State & Potentially Responsible Parties' Actions

THREATS AND CONTAMINANTS: Sediments In The Sewer Lines & On-site Soils Are Contaminated With Pcbs & Heavy Metals Including Arsenic Cadmium & Lead People Who Trespass On The Site May Be Exposed To Pcbs Through Direct Contact With Or Ingestion Of Contaminated Soils Or Sediments Cleanup Activities Such As Repaving Streets & Vacuuming Yards & Alleys Have Reduced The Public Health Threat In The Residential Areas

RESPONSE ACTION STATUS: Interim Actions: Beginning In 1986 The Epa Excavated The Off-site Contaminated Soil & Cleaned The Streets & Alleys With A Pressure Sprayer & Steel-wire Brushes Alleys & Streets That Could No Be Cleaned By The Presure Sprayer Were Repaved With 2 Feet Of Asphalt Approximately 10000 Cubic Yards Of Soil Were Removed From Backyards Parkways & Vacant Lots Surrounding The Facility The Excavated Soil Was Stored On Site During Excavation Some Residents Were Relocated Temporarily A System Was Installed To Control Drainage & To Treat The Collected Runoff In Addition The Site Was Fenced To Prevent Access In 1988 The Epa Overpacked Or Placed In Sturdy Containers Several Hundred Capacitors Leaking Pcb & 30 To 40 Drums Containing Pcb-contaminated Oil About 600 Cubic Yards Of Pcb-contaminated Debris The Capacitors & Transformers Were Disposed Of At Federally-approved Facilities Approximately 45 Tons Of Scrap Metal Were Decontaminated & Removed By A Local Salvage Company The Epa Also Repaired & Upgraded The Fence Which Had Been Demaged By Vandals In 1989 The Parties Potentially Responsible For The Site Contamination Were Ordered By The Epa To Undertake Interim Safety Measures At The Site

SITE FACTS: In 1989 The Epa Issued An Administrative Order To Several Parties Potentially Responsible For Site Contamination Requiring Them To Undertake Interim Measures To Clean Up The Site

ENVIRONMENTAL PROGRESS: The Numerous Interim Actions Taken To Remove The Contaminants From The Area Fencing The Area & Repaving Streets & Alleyways In The Area Of The Site Have Reduced The Potential For Exposure To Hazardous Substances At The Carter Industrial Inc Site While Final Cleanup Activities Are Being Planned

SITE REPOSITORY: Main Library Reference Department Detroit Public Library 5201 Woodward Ave Detroit Mi 48202

APPENDIX A

GaiaTech's Standard Terms and Conditions

1. Unless the Scope of Work provides otherwise, the Estimated Fees contained therein constitute GAIATECH's estimate of the probable cost required to complete the proposed Project. The Estimated Fees identified in GAIATECH's proposal shall not be deemed to be either a guaranteed maximum or "guaranteed not-to-exceed" amount with respect to the cost of performing the Project identified in any such proposal. However, in performing any Project, GAIATECH will not perform work for which it will charge more than the Estimated Fees without the client's prior approval.

2. Where the payment for GAIATECH's services is to be calculated on a time and material or cost reimbursement basis, the following commercial terms shall apply:

   (a) Where any agreement is based on the hourly or unit rate of specific individuals, equipment or inventory item, normal and customary increases will become effective immediately upon notice to the Client and will be reflected in GAIATECH's next invoice submitted to the Client.

   (b) Expenses properly chargeable to the Project shall include: reasonable travel and living expenses of GAIATECH personnel on business connected with the Project; shipping costs; reproduction and photographic costs; agency fees; map costs; equipment rental costs; telephone charges; expendable materials and supplies purchased specifically for the Project; and professional, analytical and technical subcontractors and advisors retained in connection with the Project. These are referred to collectively as third-party expenses. A 15 percent handling and administrative charge will be added to all third-party Project expenses, including subcontractor expenses. If GAIATECH services are subject to local or state taxes or fees these additional costs will be charged to the Project and reimbursed by the Client.

   (c) If GAIATECH personnel are called or subpoenaed for depositions, examination, court appearances, or otherwise to appear or testify in proceedings in connection with the Project, GAIATECH shall be paid on a time-and material basis in accordance with GAIATECH's then current standard billing rates for such matters.

3. Invoices will be submitted to the Client on a monthly basis and shall be payable upon receipt. Unpaid balances shall be considered past due 30 days after the invoice date. Past due balances shall be subject to an interest rate of 1.5 percent per month or the maximum permissible under state law, whichever is less. Payments received will be applied first to any accrued interest, with the balance of the payment then applied to any unpaid fees. In addition, GAIATECH may, after giving seven (7) days written notice, suspend services under any agreement without liability until all past due accounts (including fees and accrued interest) have been paid. Timely payment is an essential condition of Client's performance of any agreement between GAIATECH and Client. In the event GAIATECH must take legal action to be paid for its services and prevails, all costs associated with such action including reasonable attorney fees, shall be reimbursed by the Client.

4. **Information and Access**

(a) Upon request of GAIATECH, Client shall furnish or cause to be furnished to GAIATECH all documents and information in Client's possession or control that relate to the identity, location, quantity, nature or characteristics of any hazardous substance or wastes at, on or under the Site. In addition, upon request of GAIATECH, to the extent of Client's possession or control, Client shall furnish or cause to be furnished to GAIATECH all existing reports, data, studies, plans, specifications, documents and other information of surface or subsurface site conditions, including but not limited to the location of all subsurface structures such as pipes, tanks, cables, and utilities, required by GAIATECH for proper performance of its services hereunder. GAIATECH shall be responsible for requesting utility marking from all applicable utility marking services prior to the performance of its services hereunder.

GAIATECH and its subcontractors shall be entitled to rely upon Client provided documents and information in performing the services required under this contract; however, GAIATECH assumes no responsibility or liability for their accuracy or completeness. Client provided documents shall remain the property of the Client.

(b) Client shall provide for right of entry and access to the Site for GAIATECH, its agents, employees, and subcontractors, and all necessary equipment and personnel, in order to perform the Scope of Work. GAIATECH shall take all reasonable precautions to minimize damage to the Site from use of equipment, but the parties understand and agree that in the normal course of work some damage may occur.

5. **Subcontractors**

GAIATECH may employ qualified subcontractors to perform portions of the Scope of Work.

6. **Permits and Licenses**

(a) GAIATECH shall secure all permits, approvals, and licenses, and shall require its subcontractors, if any, to secure all permits and licenses necessary for performance under this contract.

(b) GAIATECH shall comply with all municipal, state and federal ordinances, laws, statutes, rules, and regulations that are applicable to the Scope of Work.

7. **Warranty**

(a) GAIATECH is an independent contractor and GAIATECH's services will be performed, findings obtained, and recommendations prepared in accordance with generally and currently accepted professional practices and standards for nationally recognized firms engaged in similar work. THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES EITHER EXPRESS OR IMPLIED.

(b) GAIATECH shall correct any defects in the materials or in services that are not performed in accordance with the foregoing warranty, at no additional charge to Client. Any claim pursuant to this contract must be in writing and received by GAIATECH within one (1) year of the completion of the services or such claims shall be deemed waived.

8. **Insurance**

GAIATECH has furnished Client certifications of insurance reflecting the limits of insurance coverage GAIATECH has obtained, and which shall remain in full force and effect during the term of this contract, for the following types of insurance: worker's compensation insurance (as required by the laws of the state where the work is performed); professional liability insurance; comprehensive general liability insurance; and automobile liability insurance.

9. **Indemnity**

(a) GAIATECH shall indemnify, defend, and hold Client harmless from and against all claims, suits, and proceedings, and any losses or damages actually incurred by Client, which are caused by GAIATECH's negligent acts, errors, or omissions or those of its agents or employees in the performance of this contract; provided, however, that GAIATECH's liability under this subparagraph:

(i) Shall be paid from and limited to the proceeds of the applicable policy of insurance provided for and in effect pursuant to this contract;

(ii) Shall not include any loss or damages for lost profits or consequential damages of any kind or nature; and

(iii) Shall apply only if Client notifies GAIATECH in writing of its claim for indemnity within one (1) year of completion of the Scope of Work.

(b) Client shall indemnify, defend and hold GAIATECH harmless from and against all claims, suits, and proceeds and any damages or losses incurred by GAIATECH, including but not limited to any claims, damages, or costs for damages or losses to any subsurface structures or utilities, which are caused by the acts, errors, or omissions of Client, its agents or employees, and the work of any third parties obligated directly to Client to perform work at or about the Site; provided, however, that Client's liability under this subparagraph:

(i) Shall not include any loss or damages for lost profits or consequential damages of any kind or nature; and

(ii) Shall apply only if GAIATECH notifies Client in writing of its claim for indemnity within one (1) year of completion of the Scope of Work.

(c) Absent of GAIATECH's negligence, Client acknowledges that GAIATECH has neither created nor contributed to the creation or existence of any type of hazardous or toxic waste, material, or substance, or any other type of environmental hazard or pollution, at Client's Site or in connection with the Scope of Work; and it is understood and agreed by Client that GAIATECH shall have no liability therewith. Client shall indemnify, defend and hold GAIATECH harmless for all claims, suits and proceedings, and any losses or damages actually incurred by GAIATECH in connection therewith.

10. **Force Majeure**

Costs and schedule commitments shall be extended for delays caused by Client's failure to provide information or access to the Site as required, or by Client's delay in responding to a Change Order request, or for delays caused by changes in the waste stream or unforeseen conditions at the Site, such as fire, floods, strikes, riots, unavailability of labor or materials or services, bad weather, or action, inaction or regulations of any governmental agency. If work stoppage or interruption caused by any of the above result in additional cost and/or time to complete the Scope of Work beyond that set forth in this Contract, GAIATECH shall be entitled to a reasonable adjustment to the Estimated Fees and work schedule.

11. **Title to Materials**

Materials removed from the Site, including but not limited to soils, water, samples, and cuttings shall remain the property of Client. When off-site treatment, storage or disposal is required, GAIATECH shall, using a manifest signed by Client as generator, assist Client in having such materials transported or arrange for transportation to a location selected by Client.

12. **Confidentiality**

(a) GAIATECH agrees that its observations of Client's operation, plant and equipment, and its receipt of any documentation pertaining to Client's business operations, shall be held in strict confidence and not be disclosed to any other party except to the extent such information may:

(i) Be or later become part of the public domain; or

(ii) Be already lawfully in the possession of GAIATECH at the time it was acquired hereunder; or

(iii) Be required by law or court order to be publicly disclosed.

13. **Termination by Client**

The client may, after giving seven (7) days written notice to GAIATECH, stop the Scope of Work and /or terminate this contract.

14. **Termination by GAIATECH**

(a) GAIATECH, for any of the following reasons, after giving seven (7) days notice to the Client, shall have the right to the stop the Project and/or terminate this Contract:

(i) If Client shall fail to pay GAIATECH in accordance with the payment terms set forth herein;

(ii) If Client is adjudged bankrupt, or makes general assignment for the benefit of creditors, or if a receiver is appointed on account of its insolvency.

15. **Effect of Termination by Client or GAIATECH**

In the event Client or GAIATECH terminates this Contract or stops the Project under the conditions set forth in paragraphs 13 or 14 above, Client shall remain obligated to pay GAIATECH for all portions of the Scope of Work performed, for all of its obligations under the subcontracts which it was unable through reasonable efforts to cancel, and for any additional reasonable costs of demobilization incurred by GAIATECH.

16. **Reference**

GAIATECH upon obtaining Client permission to do so shall have the authority to use Clients name as a client and a general description of the Project, work, or service performed as reference for other prospective clients.

17. **Severability**

If any provision of this Contract, shall to any extent be held invalid, the remainder of this Contract shall not be affected thereby and each remaining provision of this Contract shall be valid and enforceable to the fullest extent permitted by law.

18. **Survival**

The parties' respective obligations, as set forth in these terms and conditions, including Client's obligation to pay GAIATECH for work GAIATECH has performed, shall survive the termination or expiration of this Contract.

19. **Applicable Law**

This Contract and performances thereunder, shall be governed by and construed in accordance with the laws of the State of Illinois.

Unplottable Sites

The remaining report pages list additional environmental sites that have been selected based on geographic criteria unique to your study site. They are classified as "unplottable sites" and require further investigation to assess their potential impact on your site.

How to Evaluate Unplottable Sites

Step 1
Streets Within the Radius: the following page is an alphabetical index of all streets that intersect or are contained within the largest study radius (usually one mile).

Step 2
Cross-Reference: use the "Streets Within the Radius" index to cross-reference the unplottable sites. For example, if Maple Avenue and Oak Avenue are listed in the street index, then any unplottable sites with a Maple Avenue or Oak Avenue address should be checked for possible impact on study site.

Questions on ERIIS' Proprietary Geocoding?

We're happy to answer any questions you might have about our data processing and **point-geocoding** (assigning a latitude and longitude to each address). Just give us a call on our toll-free number at (800) 989-0402 and let us know what state you're calling from. Our customer service staff is available from 8 a.m. to 8 p.m. (EST).

The ASTM Standard Practice For Environmental Site Assessments

As stated in the recently published **Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process** (E1527) by the American Society for Testing and Materials (ASTM):

> "For large databases with numerous facility records (such as RCRA hazardous waste generators and registered underground storage tanks), the records are not practically reviewable unless they can be obtained from the source agency in the smaller geographic area of ZIP code (3.3.24)."

Therefore, this Report contains information available by latitude/longitude or by ZIP code. If your research requires environmental records for which only city or county information is available (i.e., no valid street or ZIP code) ERIIS will include this data at no extra charge.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

D001 -- A solid waste that exhibits the characteristic of ignitability, but is not listed as a hazardous waste in Subpart D.

D002 -- A solid waste that exhibits the characteristic of corrosivity, but is not listed as a hazardous waste in Subpart D.

D003 -- A solid waste that exhibits the characteristic of reactivity, but is not listed as a hazardous waste in Subpart D.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

F001 -- The following spent halogenated solvents used in degreasing: Tetrachloroethylene, trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

F002 -- The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents or those listed in F001, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

F003 -- The following spent non-halogenated solvents: Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; all spent solvent mixtures/blends containing, before use, only the above spent non-halogenated solvents; and all spent solvent mixtures/blends containing, before use, one or more of the above non-halogenated solvents, and, a total of ten percent or more (by volume) of one or more of those solvents listed in F001, F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

F004 -- The following spent non-halogenated solvents: Cresols and cresylic acid, and nitrobenzene: all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogentaed solvents or those solvents listed in FOO1, FOO2, and FOO5; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

F005 -- The following spent non-halogenated solvents: Toluene, methyl ethyl ketone, carbon disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above non-halogenated solvents or those solvents listed in FOO1, F002, or FOO4; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.

F006 -- Wastewater treatment sludges from electroplating operations except from the following processes: (1) Sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning/stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.

F007 -- Spent cyanide plating bath solutions from electroplating operations.

F008 -- Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

F009 -- Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.

F010 -- Quenching bath residue from oil baths from metal heat treating operations where cyanides are used in the process.

F011 -- Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.

F012 -- Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.

F019 -- Wastewater treatment sludges from the chemical conversion coating of aluminum.

F020 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- or tetrachlorophenol, or of intermediates used to produce their pesticide derivatives. (This listing does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.)

F021 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of pentachlorophenol, or of intermediates used to produce its derivatives.

F022 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzenes under alkaline conditions.

F023 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the production or manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tri- and tetrachlorophenols. (This listing does not include wastes from equipment used only for the production or use of hexachlorophene from highly purified 2,4,5- trichlorophenol.)

F024 -- Wastes, including but not limited to, distillation residues, heavy ends, tars, and reactor clean-out wastes from the production of chlorinated aliphatic hydrocarbons, having carbon content from one to five, utilizing free radical catalyzed processes. (This listing does not include light ends, spent filters and filter aids, spent dessicants, wastewater, wastewater treatment sludges, spend catalysts, and wastes listed in §261.32.)

F026 -- Wastes (except wastewater and spent carbon from hydrogen chloride purification) from the production of materials on equipment previously used for the manufacturing use (as a reactant, chemical intermediate, or component in a formulating process) of tetra-, penta-, or hexachlorobenzene under alkaline conditions.

F027 -- Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols. (This listing does not include formulations containing hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component.)

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

F028 -- Residues resulting from the incineration or thermal treatment of soil contaminated with EPA Hazardous Waste Nos. F020, F021, F022, F023, F026, and F027.

K001 -- Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and/or pentachlorophenol.

K002 -- Wastewater treatment sludge from the production of chrome yellow and orange pigments.

K003 -- Wastewater treatment sludge from the production of molybdate orange pigments.

K004 -- Wastewater treatment sludge from the production of zinc yellow pigments.

K005 -- Wastewater treatment sludge from the production of chrome green pigments.

K006 -- Wastewater treatment sludge from the production of chrome oxide greenpigments (anhydrous and hydrated).

K007 -- Wastewater treatment sludge from the production of iron blue pigments.

K008 -- Oven residue from the production of chrome oxide green pigments.

K009 -- Distillation bottoms from the production of acetaldehyde from ethylene.

K010 -- Distillation side cuts from the production of acetaldehyde from ethylene.

K011 -- Bottom stream from the wastewater stripper in the production of acrylonitrile.

K013 -- Bottom stream from the acetonitrile column in the production of acrylonitrile.

K014 -- Bottoms from the acetonitrile purification column in the production of acrylonitrile.

K015 -- Still bottoms from the distillation of benzyl chloride.

K016 -- Heavy ends or distillation residues from the production of carbon tetrachloride.

K017 -- Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.

K018 -- Heavy ends from the fractionation columnmn in ethyl chloride production.

K019 -- Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.

K020 -- Heavy ends from the distillation of vinly chloride in vinly chloride monomer production.

K021 -- Aqueous spend antimony catalyst waste from fluoromethane production.

K022 -- Distillation bottom tars from the production of phenol/acetone from cumene.

K023 -- Distillation light ends from the production of phthalic anhydride from naphthalene.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

K024 -- Distillation bottoms from the production of phthalic anhydride from naphthalene.

K025 -- Distillation bottoms from the production of nitrobenxene by the nitration of benzene.

K026 -- Stripping still tails from the production of methyl ethyl pyridines.

K027 -- Centrifuge and distillation residues from toluene diisocyanate production.

K028 -- Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.

K029 -- Wastes from the product steam stripper in the production of 1,1,1-trichloroethane.

K030 -- Column bottoms or heavy ends from the combined production of trichloroethtlene and perchloroethtlene.

K031 -- By-product salts generated in the production of MSMA and cacodylic acid.

K032 -- Wastewater treatment sludge from the production of chlordane.

K033 -- Wastewater and scrub water from the chlorination of cyclopentadiene in the production of chlordane.

K034 -- Filter solids from the filtration of hexachlorocyclopentadiene in the prodution of chlordane.

K035 -- Wastewater treatment sludges generated in the production of creosote.

K036 -- Still bottoms from toluene reclamation distillation in the production of disulfoton.

K037 -- Wastewater treatment sludges from the production of disulfoton,

K038 -- Wastewater from the washing and stripping of phorate production.

K039 -- Filter cake from the filtration of diethylphosphorodithioic acid in the productionof phorate.

K040 -- Wastewater treatment sludge from the production of phorate.

K041 -- Wastewater treatment sludge from the production of toxaphene.

K071 -- Brine purification muds from the mercury cell process in chlorine production, where separatelty prepurified brine is not used.

K073 -- Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.

K083 -- Distillation bottoms from aniline production.

EPA HAZARDOUS WASTE NUMBERS -- HAZARDOUS WASTE DESCRIPTION

K085 -- Distillation or fractionation column bottoms from the production of chlorobenzenes.

K093 -- Distillation light ends from the production of phthalic anhydride from ortho-xylene.

K095 -- Distillation bottoms from the production of 1,1,1-trichloroethane.

K096 -- Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.

K097 -- Vacuum stripper discharge from the chlordane chlorinator in the production of chlordane.

K098 -- Untreated process wastewater from the production of toxaphene.

K103 -- Process residues from aniline extraction from the production of aniline.

K104 -- Combined wastewater streams generated from nitrobenzene/aniline production,

K105 -- Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.

K106 - Wastewater treatment sludge from the mercury cell process in chlorine production.

K111 - Product washwaters from the production of dinitrotoluene via nitration of toluene.

K112 -- Reaction by-product water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.

K113 -- Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.

K114 -- Vicinals from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.

K115 -- Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.

K116 -- Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.

K117 -- Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.

K118 -- Spent absorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.

K136 -- Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.

CERTIFIED MAIL

Ms. Bridget R. Pitlock
Environmental and Regulatory Support Remediation Team
Worldwide Facilities Group
General Motors Corporation
485 West Milwaukee Avenue, MC 482-310-004
Detroit, Michigan 48202-3220

Dear Ms. Pitlock:

SUBJECT: Acceptance of Closure Certification, Cadillac Motor Car-Clark Street Facility, General Motors Corporation, Detroit, Wayne County: MID 005 356 704

The Michigan Department of Environmental Quality, Waste Management Division, has reviewed the closure certification and its addenda, received June 11, 1990, February 6, 1996, and December 26, 1996, respectively, for General Motors Corporation's (GM's) Cadillac Motor Car-Clark Street facility located in Detroit, Michigan (the facility). The closure certification was submitted pursuant to the requirements of Part 111 (Hazardous Waste Management) of Michigan's Natural Resources and Environmental Protection Act, 1994 PA 451, as amended. Based on our review, GM is hereby released from its closure responsibilities at the facility under Part 111. GM is, therefore, no longer required to demonstrate financial capability for closure and liability coverage at the facility.

Facility Status

With this acceptance of the certification of closure, the facility can no longer be operated as a hazardous waste treatment, storage, or disposal facility. If hazardous waste is generated at the facility, it must be managed in accordance with all applicable generator requirements in Part 3 of the Part 111 Administrative Rules.

Financial Capability

GM demonstrates financial assurance for closure of the facility by use of a Financial Test. In accordance with R 299.9703(5), this acceptance of the certification of closure constitutes a release from the requirement to maintain such financial assurance. GM is no longer required to demonstrate closure coverage for the facility with updated Financial Test information.

GM demonstrates financial responsibility for pollution liability coverage for its facility by use of a Financial Test. In accordance with R 299.9710(16), this acceptance of the certification of closure constitutes a release from the requirement to maintain such financial responsibility. GM is no longer required to demonstrate liability coverage for the facility with updated financial test information.

Corrective Action Responsibilities

This letter does not constitute a release from any facility-wide corrective action responsibilities GM may have under Part 111 or the federal Resource Conservation and Recovery Act of 1976, as amended. In addition to the responsibility to close regulated hazardous waste management units, owners and operators are responsible to conduct corrective actions for releases of hazardous wastes and hazardous constituents at waste management units.

If you have questions, please contact Mr. Dan Dailey of the Hazardous Waste Program Section, at 517-335-6610, or me.

Sincerely,

Jim Sygo, Chief
Waste Management Division
