LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

DC#_Title: ENV-FRM-WCOL-0286 v02_Samples Receipt Checklist (SRC)
Effective Date: 8/2/2022

Sample Receipt Checklist (SRC)

Client: Arcadis Cooler Inspected by/date: KDRW / 11/07/2023 Lot #:

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:

☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA

Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA

3.2 / 3.2 °C NA / NA °C NA / NA °C NA / NA °C

Method: ☐ Temperature Blank ☑ Against Bottles IR Gun ID: 8 IR Gun Correction Factor: 0 °C

Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☑ Yes	☐ No	☐ NA	3. Were all coolers received at or below 6.0°C? If no, was Project Manager notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC and all sample containers?
☑ Yes	☐ No		7. Was collection date & time listed on the COC and all sample containers?
☑ Yes	☐ No		8. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		9. Were tests to be performed listed on the COC?
☑ Yes	☐ No		10. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		11. Was adequate sample volume available?
☐ Yes	☑ No		12. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☑ Yes	☐ No		13. Were all samples containers accounted for? (No missing/excess)
☐ Yes	☐ No	☑ NA	14. Were VOA, 8015C and RSK-175 samples free of bubbles >"pea-size" (¼" or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	15. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	16. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	17. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☑ Yes	☐ No	☐ NA	18. Was the quote number listed on the container label? If yes, Quote # 25329

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H_2SO_4, HNO_3, HCl, NaOH using SR # NA. ☐

Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Unique ID: NA.

Case Narrative
Arcadis U.S., Inc.
Lot Number: YJ26022

This Report of Analysis contains the analytical result(s) for the sample(s) listed on the Sample Summary following this Case Narrative. The sample receiving date is documented in the header information associated with each sample.

All results listed in this report relate only to the samples that are contained within this report.

Sample receipt, sample analysis, and data review have been performed in accordance with the Pace Quality Assurance Management Plan (QAMP), applicable Shealy standard operating procedures (SOPs), the 2003 NELAC standard, and Shealy policies. Additionally, the DoD QSM version 5.4 has been followed for these samples, and specifically Table B-15 was followed for all PFAS samples. Any exceptions to the QAMP, SOPs, NELAC standards, the DoD QSM, or policies are qualified on the results page or discussed below.

All QC associated with these samples were compliant with DOD QSM 5.4 table B-15 and our PFAS SOP.

Correction factors (CF) are used to calculate the original sample concentration. The CF is the inverse of the concentration factor (sample volume / extract final volume) times the dilution factor (DF). The CF is calculated as follows:

CF = DF * FV / Vo

FV is volume of extract (mL)
Vo is initial sample volume (mL)
DF is dilution factor. For undiluted analysis, DF = 1.

Sample concentration for aqueous samples:
Concentration (ng/L) = Cs*CF,

$$C_s = \frac{\left(\frac{(A_s x C_{is})}{A_{is}}\right) - B}{M1}$$

Where

C_s is on column concentration of target analyte in the sample (ng/L)
C_{is} is concentration of internal standard in the sample (ng/L)
A_s is peak response of target analyte in the sample
A_{is} is peak response of internal standard in the sample
M1 is the average RF from ICAL or the slope from linear regression ICAL
B is the y-intercept from the ICAL

Pace is a TNI accredited laboratory; however, the following analyses are currently not listed on our TNI scope of accreditation: E. coli and Total coliforms SM 9223 B-2004, Solid Chemical Material: TOC Walkley-Black, Biological Tissue: All, Non-Potable Water: SGT-HEM EPA 1664B, Silica EPA 200.7, Boron, Calcium, Silicon, Strontium EPA 200.8, Bicarbonate, Carbonate, and Hydroxide Alkalinity SM 2320 B-2011, SM 9221 C E-2006 & SM 9222D-2006, Strontium SW-846 6010D, VOC SM 6200 B-2011, Fecal Coliform Colilert-18. If you have any questions regarding this report, please contact the Pace Project Manager listed on the cover page.

PFAS
Samples YJ26022-001, YJ26022-003, YJ26022-005, YJ26022-008, YJ26022-017, YJ26022-019 required centrifugation prior to extraction, due to excessive solids present in the samples. Centrifugation was performed following the PFAS Aqueous Centrifuge Protocol; samples were spiked with Surrogate (SUR; Extracted Internal Standard/EIS) and shaken vigorously before being poured into a conical bottle and centrifuged. The centrifuged aqueous sample was decanted back into the original sample bottle, off of the condensed solids remaining in the centrifuge bottle. Original sample bottle was rinsed as normal and centrifuge bottle was rinsed with 4mL of MeOH. Centrifuge bottle rinsate was added to the elution. Samples concentrated to <5mL and reconstituted to 5mL using MeOH by transfer pipet.

Surrogate recovery for the following samples was outside the upper control limit: YJ26022-001, YJ26022-002, YJ26022-003, YJ26022-004, YJ26022-005, YJ26022-006, YJ26022-007, YJ26022-008, YJ26022-009, YJ26022-010, YJ26022-011, YJ26022-012, YJ26022-013, YJ26022-014, YJ26022-015, YJ26022-016, YJ26022-017, YJ26022-018, YJ26022-019, YJ26022-020, YJ26022-021, YJ26022-022, YJ26022-023. This sample did not contain any target analytes; therefore, re-extraction and/or re-analysis was not performed.

The method blank associated with batches 88543, 89091 had 6:2 FTS detected at a concentration that was above the MDL but below the PQL. All samples associated with this method blank that have detections for 6:2 FTS have been flagged with a "B".

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

Means of receipt: ☐ Pace ☐ Client ☐ UPS ☑ FedEx ☐ Other:			
☑ Yes	☐ No		1. Were custody seals present on the cooler?
☑ Yes	☐ No	☐ NA	2. If custody seals were present, were they intact and unbroken?

pH Strip ID: NA Chlorine Strip ID: NA Tested by: NA
Original temperature upon receipt / Derived (Corrected) temperature upon receipt %Solid Snap-Cup ID: NA
3.5 / 3.5 °C 1.4 / 1.4 °C 3.4 / 3.4 °C NA / NA °C
Method: ☑ Temperature Blank ☐ Against Bottles IR Gun ID: 8 IR Gun Correction Factor: 0 °C
Method of coolant: ☑ Wet Ice ☐ Ice Packs ☐ Dry Ice ☐ None

☑ Yes	☐ No	☐ NA	3. Were all coolers received at or below 6.0°C? If no, was Project Manager notified? PM was Notified by: phone / email / face-to-face (circle one).
☑ Yes	☐ No	☐ NA	4. Is the commercial courier's packing slip attached to this form?
☑ Yes	☐ No		5. Were proper custody procedures (relinquished/received) followed?
☑ Yes	☐ No		6. Were sample IDs listed on the COC and all sample containers?
☑ Yes	☐ No		7. Was collection date & time listed on the COC and all sample containers?
☑ Yes	☐ No		8. Did all container label information (ID, date, time) agree with the COC?
☑ Yes	☐ No		9. Were tests to be performed listed on the COC?
☑ Yes	☐ No		10. Did all samples arrive in the proper containers for each test and/or in good condition (unbroken, lids on, etc.)?
☑ Yes	☐ No		11. Was adequate sample volume available?
☑ Yes	☐ No		12. Were all samples received within ½ the holding time or 48 hours, whichever comes first?
☑ Yes	☐ No		13. Were all samples containers accounted for? (No missing/excess)
☐ Yes	☐ No	☑ NA	14. Were VOA, 8015C and RSK-175 samples free of bubbles >"pea-size" (¼"or 6mm in diameter) in any of the VOA vials?
☐ Yes	☐ No	☑ NA	15. Were all DRO/metals/nutrient samples received at a pH of < 2?
☐ Yes	☐ No	☑ NA	16. Were all cyanide samples received at a pH > 12 and sulfide samples received at a pH > 9?
☐ Yes	☐ No	☑ NA	17. Were all applicable NH_3/TKN/cyanide/phenol/625.1/608.3 (< 0.5mg/L) samples free of residual chlorine?
☐ Yes	☑ No	☐ NA	18. Was the quote number listed on the container label? If yes, Quote #

Sample Preservation (Must be completed for any sample(s) incorrectly preserved or with headspace.)

Sample(s) NA were received incorrectly preserved and were adjusted accordingly in sample receiving with NA mL of circle one: H2SO4, HNO3, HCl, NaOH using SR # NA. ☐
Time of preservation NA. If more than one preservative is needed, please note in the comments below.

Sample(s) NA were received with bubbles >6 mm in diameter.

Samples(s) NA were received with TRC > 0.5 mg/L (If #19 is *no*) and were adjusted accordingly in sample receiving with sodium thiosulfate ($Na_2S_2O_3$) with Unique ID: NA.

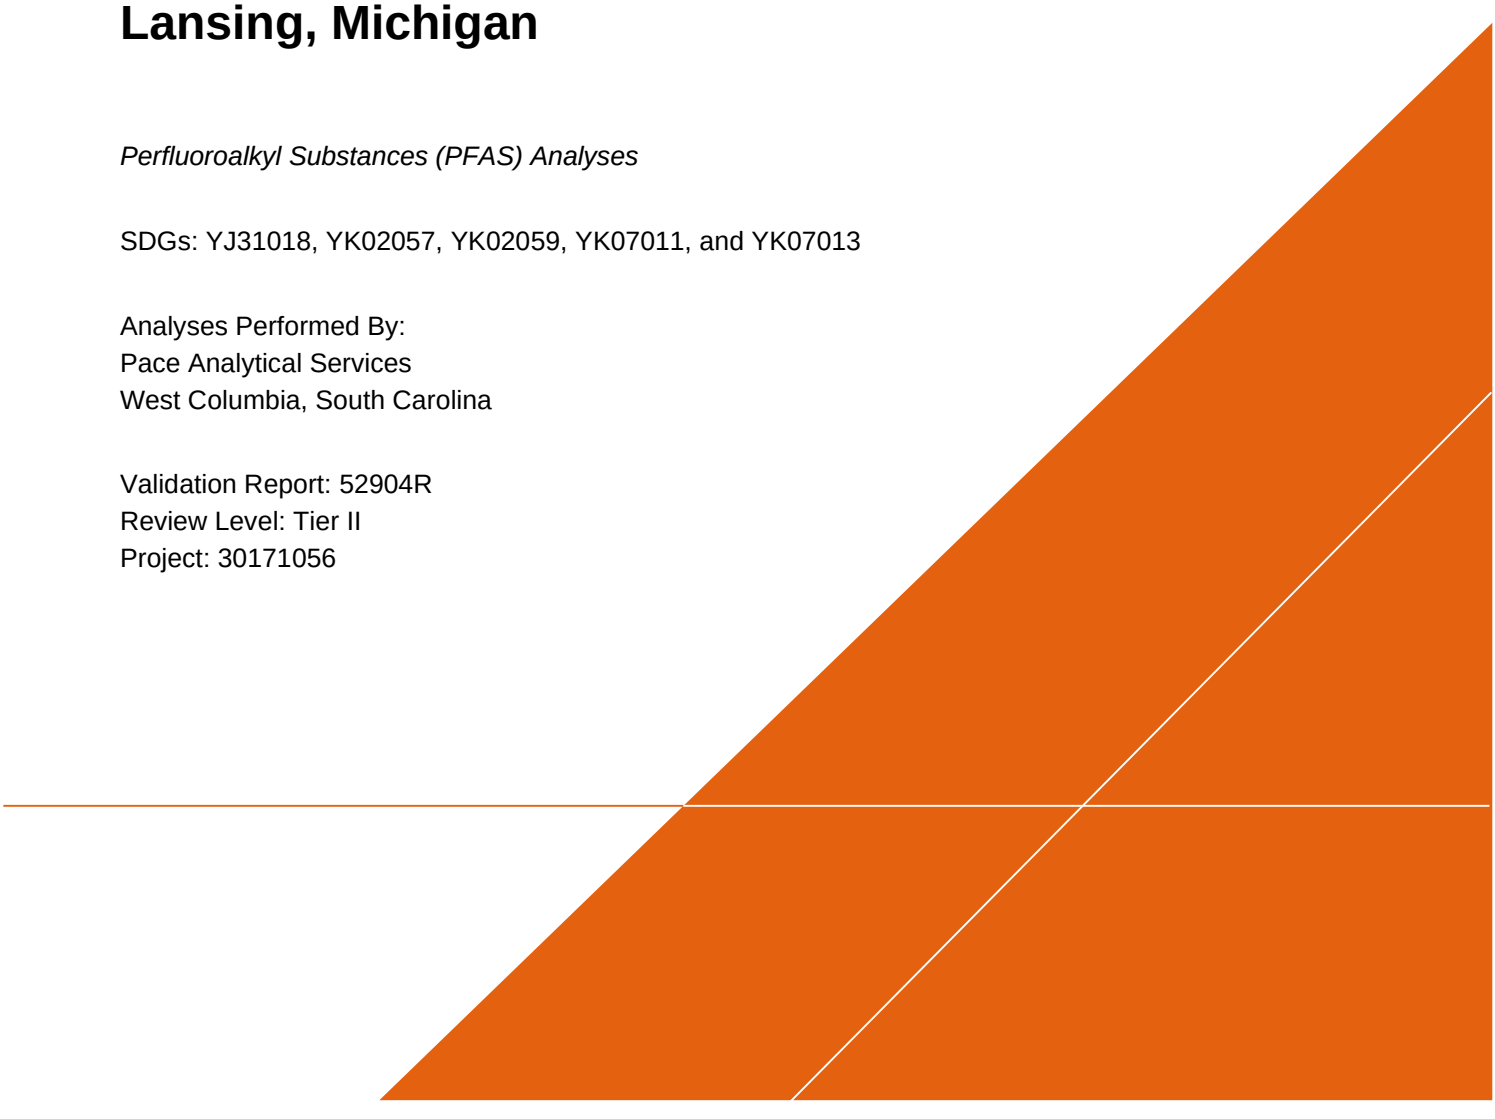
Data Review



Lansing, Michigan

Perfluoroalkyl Substances (PFAS) Analyses

SDGs: YJ31018, YK02057, YK02059, YK07011, and YK07013

Analyses Performed By:
Pace Analytical Services
West Columbia, South Carolina

Validation Report: 52904R
Review Level: Tier II
Project: 30171056

Summary

This data quality assessment summarizes the review of Sample Delivery Groups (SDGs) YJ31018, YK02057, YK02059, YK07011, and YK07013 for samples collected in association with the Plants 2, 3 and 6 sites in Lansing Michigan. The review was conducted as a Tier II evaluation and included review of data package completeness. Only analytical data as reported by the laboratory were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain-of-custody (COC) records. Analyses were performed on the following samples:

11. Narrative summary of quality assurance (QA) or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Organic Analysis Introduction

Samples were analyzed for per- and poly-fluoroalkyl substances (PFAS) using Modified United States Environmental Protection Agency (USEPA) Method 537 (modified). The data were reviewed in accordance with the following guidance documents:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA 540-R-2020-005), dated November 2020 (with reference, as appropriate, to the historical USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, OSWER 9240.1-05A-P, October 1999).
- DoD Final General Data Validation Guidelines, November 2019, DoD Final Data Validation Guidelines Module 3: PFAS, May 2020.
- Data Review and Validation Guidelines for Perfluoroalkyl Substances (PFASs) Analyzed Using EPA Method 537 (EPA 910-R-18-001, November 2018).
- Quality Assurance Project Plan, Revitalizing Auto Communities Environmental Response (RACER) Trust, August 2011.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  J The reported value was obtained from a reading less than the reporting limit but greater than or equal to the method detection limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

R The sample results are rejected as unusable. The compound may or may not be present in the sample.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

Perfluoroalkyl Substances (PFAS) Analyses

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
USEPA 537 (modified)	Water	28 days from collection to extraction and 30 days from extraction to analysis	Cool to < 6 °C; Extracts must be stored at room temperature until analysis.

Note: the holding time has been changed from the original holding time documented in USEPA 537 of 14 days to a holding time of 28 days to extraction and 30 days from extraction to analysis. This was documented in EPA Technical Brief EPA/600/F-17/022h Updated January 2020 and Wisconsin PFAS Aqueous (Non-Potable Water) and Non-Aqueous Matrices Method Expectations (EA-19-0001), dated December 2019.

The analyses that exceeded the holding time are presented in the following table; all other holding times were met.

SDG	Sample	Analyte	Extraction Holding Time Criteria	Extraction Completed
YK02057	MW-14-67_103123	Perfluorobutanoic acid (PFBA)	28 Days	39 Days
YK07013	MW-18-90_110323	Perfluorooctane sulfonic acid		48 Days
	CH-14-RO_110423	All PFAS compounds		47 Days

Sample results for parameters that were analyzed past the recommended holding times were qualified as specified in the table below.

Criteria	Qualification	
	Detects	Non-detects
Analysis or extraction completed > holding time (but < 2x holding time)	J	UJ

2. Blank Contamination

Quality assurance (QA) blanks (i.e., laboratory method blanks and equipment rinse blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Rinse blanks measure contamination of samples during field operations.

If a compound is detected in a blank at a concentration greater than the detection limit (DL), a blank action level (BAL) is calculated at five times the concentration detected in the blank. Detected compounds in the associated samples are compared to the BAL. If the result is greater than the BAL, no qualification is required, and any laboratory-assigned flags are removed, otherwise the result is qualified.

Target compounds were not detected above the MDL in the associated blanks; therefore, detected sample results are not associated with blank contamination.

3. Isotopically Labeled Extracted Internal Standards (EIS)

Labeled standards must be added to all field samples and QC samples prior to extraction. For aqueous samples prepared by serial dilution instead of solid phase extraction, they must be added to samples prior to analysis. EIS recoveries must be within the control limits of 25% to 150%.

Samples associated with EIS exhibiting recoveries outside of the control limits are presented in the following table.

SDG	Sample	EIS	Recovery	Associated Compound
YJ31018	MW-14-58R_102423	13C2-4:2FTS	> 150 %	4:2 FTS

		13C2-8:2FTS	> 150 %	8:2FTS

SDG	Sample	EIS	Recovery	Associated Compound
YK07013	MW-18-90_110323	13C4-PFBA	< 10 %	Perfluorobutanoic acid (PFBA)
		13C5-PFPeA	< 25 % but > 10 %	Perfluoropentanoic acid (PFPeA)
	MW-18-95_110323	13C2-4:2FTS	> 150 %	4:2 FTS
		13C2-6:2FTS	> 150 %	6:2FTS
	MW-18-91_110423	13C2-4:2FTS	> 150 %	4:2 FTS
		13C2-6:2FTS	> 150 %	6:2FTS
		13C2-8:2FTS	> 150 %	8:2FTS
	UNK-15_110423	13C2-4:2FTS	> 150 %	4:2 FTS
		13C2-6:2FTS	> 150 %	6:2FTS

The criteria used to evaluate the EIS recoveries are presented in the following table. In the case of an EIS deviation, the sample results associated with the EIS are qualified as documented.

Control Limit	Sample Result	Qualification
> 150%	Non-detect	No Action
	Detect	J
< 25% but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	R

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD are used to assess the precision and accuracy of the analytical method. The compounds used to perform the MS/MSD analysis must exhibit recoveries within the laboratory-established acceptance limits. When an MSD analysis is performed, the relative percent difference (RPD) between the MS/MSD results must be no greater than 30%.

Note: The MS/MSD recovery control limits do not apply for MS/MSDs performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

Samples P2-MW-02_102523, MW-21-135_110123, MW-22-147_103123, and MW-19-107_110423 were used in the MS/MSD analyses, and samples MW-21-138_103023, MW-12-11_103123, MW-18-101_110323, and MW-18-104_110223 were used in the MS analyses. The MS/MSD analysis exhibited acceptable results except as follows.

SDG	Sample	Compound	MS Recovery	MSD Recovery
YK02057	MW-21-135_110123	6:2FTS	> UL	> UL
		Perfluorooctanoic acid	< LL but > 10%	Acceptable

The criteria used to evaluate the MS/MSD recoveries are presented in the following table. In the case of MS/MSD deviations, the sample results are qualified as documented in the table below.

Control Limit	Sample Result	Qualification
> the upper control limit (UL)	Non-detect	No Action
	Detect	J
< the lower control limit (LL) but > 10%	Non-detect	UJ
	Detect	J
< 10%	Non-detect	R
	Detect	J
Parent sample concentration > 4x the MS/MSD spiking solution concentration.	Detect	No Action
	Non-detect	

Sample results associated with MS/MSD analyses exhibiting RPDs greater than the control limits are presented in the following table.

SDG	Sample	Compound
YK02057	MW-21-135_110123	4:2 FTS
YK02059	MW-22-147_103123	6:2FTS N-ethyl perfluorooctane sulfonamidoacetic acid (NEtFOSAA)

The criteria used to evaluate the RPD between the MS and MSD are presented in the following table; in the case of RPD deviations, the sample results are qualified as documented.

Control Limit	Sample Result	Qualification
> UL	Non-detect	UJ
	Detect	J

5. Laboratory Duplicate Sample Analysis

Laboratory duplicate sample results are used to assess precision and may be used in addition to or in lieu of the MSD analysis. The laboratory duplicate sample RPD criteria are applied when parent and duplicate sample concentrations are at least five times the RL and are established by the analytical laboratory. In the case where the parent and duplicate sample concentrations are less than five times the RL, a control limit of one times the RL for water matrices and two times the RL for soil matrices is applied to the difference between the results.

Samples MW-22-145_103023, P6-SB-07_110123, MW-18-97_110323, and MW-18-98_110223 were used in the laboratory duplicate sample analyses. The laboratory duplicate sample analyses exhibited acceptable results.

6. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS analysis must exhibit recoveries within the laboratory-established acceptance limits.

The LCS analyses exhibited acceptable results.

7. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. The control limits of 30% for water matrices and 50% for soil and sediment matrices are applied to the RPDs between the primary and field duplicate sample results. In the instance when the parent and duplicate sample concentrations are less than five times the reporting limit (RL), a control limit of two times the RL for water matrices or three times to RL for soil and sediment matrices is applied to the difference between the results.

Results for the field duplicate sample results are summarized in the following tables.

Sample and Field Duplicate Sample: MW-12-18_102623 and DUP-02_102623						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
Perfluorobutanesulfonic acid (PFBS)	0.77 J	1.1 J	N/A	0.33	3.7	Acceptable
Perfluorobutanoic acid (PFBA)	8.4	8.3	N/A	0.1	3.7	Acceptable

Perfluoropentanoic acid (PFPeA)	6.7	5.4	N/A	1.3	3.5	Acceptable

Notes: N/A = Not applicable
U = Not detected
J = Estimated (result is < reporting limit)

The field duplicate samples exhibited acceptable results.

8. Compound Identification

PFAS compounds are identified using the compound's ion abundance ratios, signal-to-noise values, and relative retention times. All detected sample results met the identification criteria.

The laboratory extrapolated the calibration curve to quantify the following sample result because the concentration was over-range, and no dilution analysis was performed. Therefore, this result was qualified as estimated.

SDG	Sample	Compound	Result
YJ31018	MW-21-139_102523	Perfluorooctane sulfonic acid	2100 EJ

9. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Data Validation Checklist for PFAS

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

Turn Around Time Required (Prior lab approval required for expedited TAT): ☒ Standard ☐ Rush (Please Specify)

Sample Disposal: ☐ Return to Client ☒ Disposal by Lab

Possible Hazard Identification (List any known hazards in the remarks): ☒ Non-Hazardous ☐ Flammable ☐ Skin Irritant ☐ SDS provided ☐ Unknown

QC Requirements:

	Date	Time		Date	Time
1. Relinquished by: Austin Westhuis/Arcadis	11/6/23	1630	1. Received by: FedEx	11/6/23	1630
2. Relinquished by:	Date	Time	2. Received by	Date	Time
3. Relinquished by	Date	Time	3. Received by	Date	Time
4. Relinquished by	11.7.23	950	4. Laboratory Received by	11.7.23	950

Note: All samples are retained for four weeks from receipt unless other arrangements are made

LAB USE ONLY: Received on Ice (Check) ☑ Y ☐ N ☐ Ice Pack

Receipt Temp: 3.2 °C

Temp. Blank: ☐ Y / ☒ N

d3-MeFOSAA		65	25-150

LOQ = Limit of Quantitation
ND = Not detected at or above the DL
H = Out of holding time
B = Detected in the method blank
N = Recovery is out of criteria
W = Reported on wet weight basis
E = Quantitation of compound exceeded the calibration range
P = The RPD between two GC columns exceeds 40%
DL = Detection Limit
J = Estimated result < LOQ and ≥ DL
Q = Surrogate failure
L = LCS/LCSD failure
S = MS/MSD failure

LOQ = Limit of Quantitation
B = Detected in the method blank
E = Quantitation of compound exceeded the calibration range
DL = Detection Limit
Q = Surrogate failure
ND = Not detected at or above the DL
N = Recovery is out of criteria
P = The RPD between two GC columns exceeds 40%
J = Estimated result < LOQ and ≥ DL
L = LCS/LCSD failure
H = Out of holding time
W = Reported on wet weight basis
S = MS/MSD failure

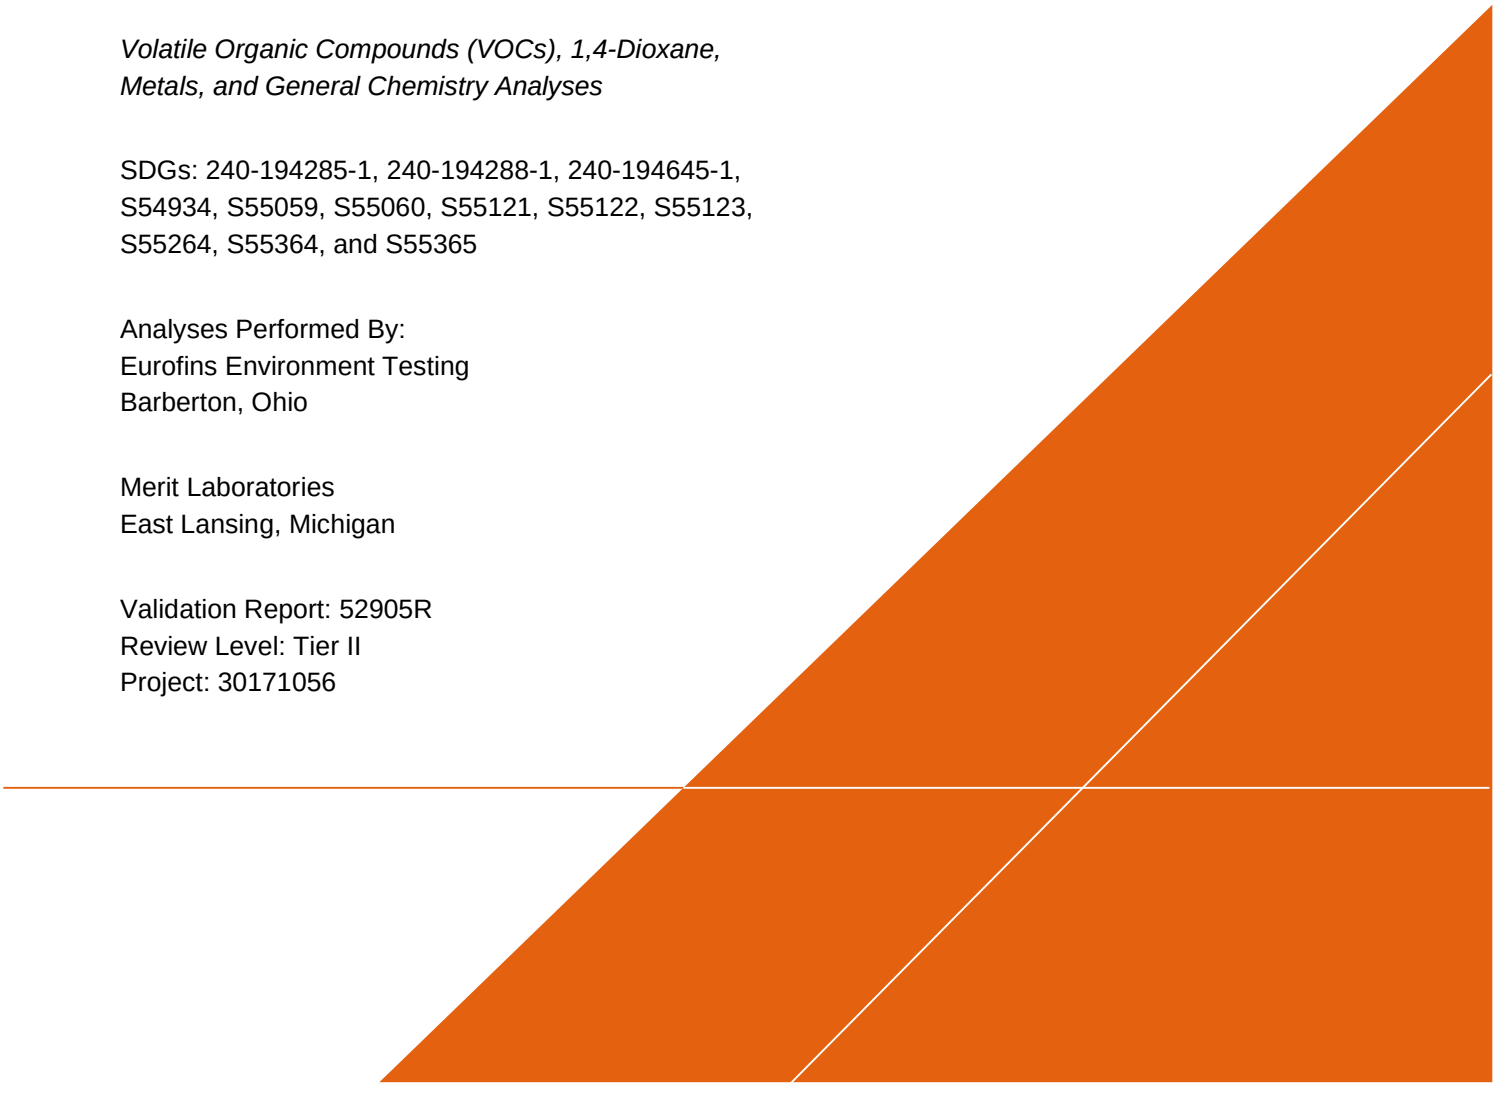
Racer – Lansing Plant 2,3&6

Data Review

Lansing, Michigan



Volatile Organic Compounds (VOCs), 1,4-Dioxane, Metals, and General Chemistry Analyses

SDGs: 240-194285-1, 240-194288-1, 240-194645-1, S54934, S55059, S55060, S55121, S55122, S55123, S55264, S55364, and S55365

Analyses Performed By:
Eurofins Environment Testing
Barberton, Ohio

Merit Laboratories
East Lansing, Michigan

Validation Report: 52905R
Review Level: Tier II
Project: 30171056

Summary

This data quality assessment summarizes the review of Sample Delivery Groups (SDGs) 240-194285-1, 240-194288-1, 240-194645-1, S54934, S55059, S55060, S55121, S55122, S55123, S55264, S55364, and S55365 for samples collected in association with the Plants 2, 3 and 6 sites in Lansing Michigan. The review was conducted as a Tier II evaluation and included review of data package completeness. Only analytical data as reported by the laboratory were reviewed for this validation. Field documentation was not included in this review. Included with this assessment are the validation annotated sample result sheets, and chain-of-custody (COC) records. Analyses were performed on the following samples:

10. Fully executed Chain-of-Custody (COC) form		X		X	
11. Narrative summary of quality assurance (QA) or sample problems provided		X		X	
12. Data Package Completeness and Compliance		X		X	

Organic Analysis Introduction

Analyses were performed according to United States Environmental Protection Agency (USEPA) Method 522 and SW-846 Methods 8260C and 8260B with selected ion monitoring (SIM). The data were reviewed in accordance with the following guidance documents:

- USEPA National Functional Guidelines for Organic Superfund Methods Data Review (EPA 540-R-2017-002), dated January 2020 (with reference, as appropriate, to the historical USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review, OSWER 9240.1-05A-P, October 1999).
- Quality Assurance Project Plan, Revitalizing Auto Communities Environmental Response (RACER) Trust, August 2011.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  J The reported value was obtained from a reading less than the reporting limit but greater than or equal to the method detection limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

R The sample results are rejected as unusable. The compound may or may not be present in the sample.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

Volatile Organic Compound (VOC) Analyses

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
VOCs by SW-846 8260C or 8260B-SIM	Water	Preserved: 14 days from collection to analysis	Cool to < 6 °C; pH < 2 with HCl
		Unpreserved: 7 days from collection to analysis	Cool to < 6 °C
	Soil	48 hours from collection to extraction and 14 days from collection to analysis	Cool to < 6 °C

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., laboratory method blanks, and equipment rinse blanks, and trip blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Equipment and field blanks also measure contamination of samples during field operations. Trip blanks also measure contamination during shipping and storage.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Sample results less than the BAL were qualified as documented in the following table.

SDG	Sample	Analyte	Sample Result	Qualification
S55059	MW-20-128_102623 TW-14-02_102623 MW-21-139_102523 MW-14-57_102623	1,4-Dioxane	Detected sample results > RL and < BAL	"UB" at detected sample concentration
S55121	MW-16-82_102723 MW-16-74_102723 MW-16-75_102823 MW-16-77_102823 MW-16-78_102823	1,4-Dioxane		
S55122	MW-14-63_102723	1,4-Dioxane		
S55264	PW-14-01_103023 MW-19-122_103023	1,4-Dioxane		

3. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

All sample analyses exhibited surrogate recoveries within the control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The spiked compounds used in the MS/MSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS and MSD results must be within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSDs performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

Samples MW-19-119D_110123, MW-16-74_102723, MW-16-84_102823, MW-12-21_110123, and MW-13-25_110223 were used in the MS/MSD analyses. The MS/MSD analyses exhibited acceptable results.

5. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS/LCSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the LCS and LCSD results must be within the laboratory-established acceptance limits.

The LCS/LCSD analyses exhibited acceptable results.

6. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. The control limits of 30% for water matrices and 50% for soil and sediment matrices are applied to the RPDs between the primary and field duplicate sample results. In the instance when the parent and duplicate sample concentrations are less than five times the reporting limit (RL), a control limit of two times the RL for water matrices or three times to RL for soil and sediment matrices is applied to the difference between the results.

Results for the field duplicate sample results are summarized in the following tables.

Sample and Field Duplicate Sample: MW-23-163_102423 and DUP-03_102423						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	12	56	129.4 %	N/A	1.0	Exceedance

Sample and Field Duplicate Sample: MW-19-121_102623 and Dup-05_102623						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	1.0 U	1.0 U	N/A	N/A	1.0	Acceptable

Sample and Field Duplicate Sample: MW-13-29_102623 and Dup-10_102623						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	7.0	7.0	0.0 %	N/A	1.0	Acceptable

Sample and Field Duplicate Sample: MW-14-56_102723 and DUP-04_102723						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	17	14	19.4 %	N/A	1.0	Acceptable

Sample and Field Duplicate Sample: MW-22-152_102723 and DUP-16_102723						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
All compounds	U	U	N/A	N/A	Varies	Acceptable

Sample and Field Duplicate Sample: MW-21-141_103023 and DUP-13_103023						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	1.0 U	1.0 U	N/A	N/A	1.0	Acceptable

Sample and Field Duplicate Sample: MW-03-05_103023 and DUP-11_103023						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	1.0 U	1.0 U	N/A	N/A	1.0	Acceptable

Sample and Field Duplicate Sample: MW-13-46_110223 and Dup-08_110223						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	1.0 U	1.0 U	N/A	N/A	1.0	Acceptable

Notes: N/A = Not applicable
U = Not detected
J = Estimated (result is < reporting limit)

Most of the field duplicate samples exhibited acceptable results. The 1,4-dioxane results for MW-23-163_102423 and DUP-03_102423 exhibited an RPD greater than the control limit. The 1,4-dioxane results for MW-23-163_102423 and DUP-03_102423 were qualified as estimated.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Semivolatile Organic Compound (SVOC) Analyses

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
1,4-Dioxane by USEPA 522	Water	28 days from collection to extraction and 28 days from extraction to analysis	Cool to < 6 °C; Na_2SO_3 and $NaHSO_3$

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., laboratory method blanks, and equipment rinse blanks, and trip blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Equipment and field blanks also measure contamination of samples during field operations. Trip blanks also measure contamination during shipping and storage.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

1,4-Dioxane was not detected above the MDL in the associated blanks; therefore, detected sample results are not associated with blank contamination.

3. Surrogates/System Monitoring Compounds

All samples to be analyzed for organic compounds are spiked with surrogate compounds prior to sample preparation to evaluate overall laboratory performance and efficiency of the analytical technique. VOC analysis requires that all surrogates associated with the analysis exhibit recoveries within the laboratory-established acceptance limits.

All sample analyses exhibited surrogate recoveries within the control limits.

4. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

MS/MSD data are used to assess the precision and accuracy of the analytical method. The spiked compounds used in the MS/MSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the MS and MSD results must be within the laboratory-established acceptance limits.

Note: The MS/MSD recovery control limits do not apply for MS/MSDs performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

Sample MW-19-119D_110123 was used in the MS/MSD analysis. The MS/MSD analysis exhibited acceptable results.

5. Laboratory Control Sample/Laboratory Control Sample Duplicate (LCS/LCSD) Analysis

The LCS/LCSD analysis is used to assess the precision and accuracy of the analytical method independent of matrix interferences. The spiked compounds used in the LCS/LCSD analysis must exhibit recoveries within the laboratory-established acceptance limits. The relative percent difference (RPD) between the LCS and LCSD results must be within the laboratory-established acceptance limits.

The LCS/LCSD analyses exhibited acceptable results.

6. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. The control limits of 30% for water matrices and 50% for soil and sediment matrices are applied to the RPDs between the primary and field duplicate sample results. In the instance when the parent and duplicate sample concentrations are less than five times the reporting limit (RL), a control limit of two times the RL for water matrices or three times to RL for soil and sediment matrices is applied to the difference between the results.

Results for the field duplicate sample results are summarized in the following tables.

Sample and Field Duplicate Sample: TWP-90-04_102523 and DUP-01_102523						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	0.24	0.30	N/A	0.06	0.2	Acceptable

Sample and Field Duplicate Sample: MW-13-44_102523 and DUP-06_102523						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
1,4-Dioxane	5.7	5.0	13.1 %	N/A	0.2	Acceptable

Note: N/A = Not applicable

The field duplicate samples exhibited acceptable results.

7. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Inorganic Analysis Introduction

Analyses were performed according to Standard Methods (SM) 4500-NO3-F, 4500-N/NH3-G, 4500-NH3-G, and 4500-P-E. The data were reviewed in accordance with the following guidance documents:

- USEPA National Functional Guidelines for Inorganic Superfund Methods Data Review, OLEM 9240.1-66 (November 2020) (with reference, as appropriate, to the historical USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review, OSWER 9240.1-45, October 2004).
- Quality Assurance Project Plan, Revitalizing Auto Communities Environmental Response (RACER) Trust, August 2011.

The data review process is an evaluation of data on a technical basis rather than a determination of contract compliance. As such, the standards against which the data are being weighed may differ from those specified in the analytical method. It is assumed that the data package represents the best efforts of the laboratory and had already been subjected to adequate and sufficient quality review prior to submission.

During the review process, laboratory data are verified against the supporting documentation. Based on this evaluation, qualifier codes may be added, deleted, or modified by the data reviewer. Results are qualified with the following codes in accordance with USEPA National Functional Guidelines:

- Concentration (C) Qualifiers

  U The compound was analyzed for but not detected. The associated value is the compound quantitation limit.

  J The reported value was obtained from a reading less than the reporting limit but greater than or equal to the method detection limit.

  B The compound has been found in the sample as well as its associated blank, its presence in the sample may be suspect.

- Quantitation (Q) Qualifiers

  E The compound was quantitated above the calibration range.

  D Concentration is based on a diluted sample analysis.

- Validation Qualifiers

  UB Compound considered non-detect at the listed value due to associated blank contamination.

  J The compound was positively identified; however, the associated numerical value is an estimated concentration only.

  UJ The compound was not detected above the reported sample quantitation limit. However, the reported limit is approximate and may or may not represent the actual limit of quantitation.

  JN The analysis indicates the presence of a compound for which there is presumptive evidence to make a tentative identification. The associated numerical value is an estimated concentration only.

  R The sample results are rejected as unusable. The compound may or may not be present in the sample.

Two facts should be noted by all data users. First, the "R" flag means that the associated value is unusable. In other words, due to significant quality control (QC) problems, the analysis is invalid and provides no information as to whether the compound is present or not. "R" values should not appear on data tables because they cannot be relied upon, even as a last resort. The second fact to keep in mind is that no compound concentration, even if it has passed all QC tests, is guaranteed to be accurate. Strict QC serves to increase confidence in data, but any value potentially contains error.

General Chemistry Analyses

1. Holding Times

The specified holding times for the following methods are presented in the following table.

Method	Matrix	Holding Time	Preservation
Ammonia-N by SM 4500-NH3	Water	28 days from collection to analysis	Cool to < 6 °C; pH of < 2
Nitrate by SM 4500-NO3-F	Water	48 hours from collection to analysis	Cool to < 6 °C
Phosphorus by SM 4500-P-E	Water	28 days from collection to analysis	Cool to < 6 °C; pH of < 2
Total Kjeldahl Nitrogen (TKN) by SM 4500-N/NH3-G	Water	28 days from collection to analysis	Cool to < 6 °C; pH of < 2

All samples were analyzed within the specified holding time criteria.

2. Blank Contamination

Quality assurance (QA) blanks (i.e., laboratory method blanks, and equipment rinse blanks, and trip blanks) are prepared to identify any contamination which may have been introduced into the samples during sample preparation or field activity. Method blanks measure laboratory contamination. Equipment and field blanks also measure contamination of samples during field operations. Trip blanks also measure contamination during shipping and storage.

A blank action level (BAL) of five times the concentration of a detected compound in an associated blank (common laboratory contaminant compounds are calculated at ten times) is calculated for QA blanks containing concentrations greater than the method detection limit (MDL). The BAL is compared to the associated sample results to determine the appropriate qualification of the sample results, if needed.

Target analytes were not detected above the MDL in the associated blanks; therefore, detected sample results are not associated with blank contamination.

3. Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analysis

All analytes must exhibit recoveries within the established acceptance limits of 75% to 125%. When a MSD analysis is performed, the relative percent difference (RPD) between the MS/MSD results must be within the established acceptance limits of 20% for water matrices and 35% for soil matrices.

Note: The MS/MSD recovery control limits do not apply for MS/MSDs performed on samples where the compound concentration detected in the parent sample exceeds the MS/MSD spiking concentration by a factor of four or greater. Sample results associated with MS/MSD exceedances where the parent samples are not site-specific are not qualified.

Sample MW-14-61_102623 was used in the MS analyses. The MS analyses exhibited acceptable results.

4. Laboratory Duplicate Sample Analysis

The laboratory duplicate sample relative percent difference (RPD) criterion is applied when parent and duplicate sample concentrations are greater than or equal to five times the reporting limit (RL). A control

limit of 20% for water matrices and 35% for soil matrices is applied when the criteria above is true. In the instance when the parent and/or duplicate sample concentrations are less than or equal to five times the RL, a control limit of one times the RL is applied for water matrices and two times the RL for soil matrices.

The laboratory duplicate sample analyses exhibited acceptable results.

5. Laboratory Control Sample (LCS) Analysis

The LCS analysis is used to assess the accuracy of the analytical method independent of matrix interferences. The analytes associated with the LCS analysis must exhibit recoveries between the control limits of 80% and 120%.The LCS analyses exhibited acceptable results.

5. Field Duplicate Sample Analysis

The field duplicate sample analysis is used to assess the overall precision of the field sampling procedures and analytical method. The control limits of 30% for water matrices and 50% for soil and sediment matrices are applied to the RPDs between the primary and field duplicate sample results. In the instance when the parent and duplicate sample concentrations are less than five times the reporting limit (RL), a control limit of two times the RL for water matrices or three times to RL for soil and sediment matrices is applied to the difference between the results.

Results for the field duplicate sample results are summarized in the following tables.

Sample and Field Duplicate Sample: MW-19-121_102623 and Dup-05_102623						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
Ammonia	0.02 U	0.06	N/A	0.04	0.02	Acceptable
Total Kjeldahl Nitrogen (TKN)	1.3	9.8	153.2 %	N/A	0.4	Exceedance
Total Phosphorus	10.3	112	166.3 %	N/A	12	Exceedance

Sample and Field Duplicate Sample: MW-13-29_102623 and Dup-10_102623						
Compound	Sample Result	Duplicate Result	RPD	Difference	RL	Evaluation
Ammonia	0.13	0.12	8.0 %	N/A	0.02	Acceptable
Total Kjeldahl Nitrogen (TKN)	0.4	0.2	N/A	0.2	0.1	Acceptable
Total Phosphorus	0.02	0.02	N/A	0.0	0.01	Acceptable

Notes: N/A = Not applicable
U = Not detected
J = Estimated (result is < reporting limit)

The TKN and phosphorus results for MW-19-121_102623 and Dup-05_102623 exhibited an RPD greater than the control limit. The TKN and phosphorus results for MW-19-121_102623 and Dup-05_102623 were qualified as estimated.

6. System Performance and Overall Assessment

Overall system performance was acceptable. Other than for those deviations specifically mentioned in this review, the overall data quality is within the guidelines specified in the method.

Preservation Used: 1= Ice, 2= HCl; 3= H2SO4; 4=HNO3; 5=NaOH; 6= Other _____

Possible Hazard Identification:
Are any samples from a listed EPA Hazardous Waste? Please List any EPA Waste Codes for the sample in the Comments Section if the lab is to dispose of the sample.

☑ Non-Hazard ☐ Flammable ☐ Skin Irritant ☐ Poison B ☐ Unknown

Sample Disposal (A fee may be assessed if samples are retained longer than 1 month)

☐ Return to Client ☑ Disposal by Lab ☐ Archive for _____ Months

Special Instructions/QC Requirements & Comments:

Custody Seals Intact: ☐ Yes ☐ No	Custody Seal No.:		Cooler Temp. (°C): Obs'd: _____	Corr'd: _____	Therm ID No.: _____

Soil Vapor Laboratory Analytical Reports

Fibertec
environmental
services

Monday, March 13, 2023

Fibertec Project Number:	A13506 Amended
Project Identification:	RACER Lansing (30171056.00102) /30171056.00102
Submittal Date:	02/14/2023

Ms. Kaitlyn Hunt
Arcadis U.S., Inc. - Novi
28550 Cabot Drive
Suite 500
Novi, MI 48377

Dear Ms. Hunt,

Thank you for selecting Fibertec Environmental Services as your analytical laboratory. The samples you submitted have been analyzed in accordance with NELAC standards and the results compiled in the attached report. Any exceptions to NELAC compliance are noted in the report. These results apply only to those samples submitted. Please note TO-15 samples will be disposed of 7 calendar days after the reporting date. All other samples will be disposed of 30 days after the reporting date.

This report has been amended to correct the project number and sample descriptors per client request. This replaces the report sent on Feburaury 19th, 2023.

If you have any questions regarding these results or if we may be of further assistance to you, please contact me at (517) 699-0345.

Sincerely,

Bailey Welch

Surrogate Summary

			Control Limits	Instrument	Batch	Run Time	Column	Inst. Method
4-Bromofluorobenzene(S)	**92**	%	80-120	VQ	VQ23B15A	2/16/2023 01:33	1	VQ400

Definitions/ Qualifiers:

A: Spike recovery or precision unusable due to dilution.
B: The analyte was detected in the associated method blank.
E: The analyte was detected at a concentration greater than the calibration range, therefore the result is estimated.
J: The concentration is an estimated value.
M: Modified Method
U: The analyte was not detected at or above the reporting limit.
X: Matrix Interference has resulted in a raised reporting limit or distorted result.
W: Results reported on a wet-weight basis.
***:** Value reported is outside QC limits
D: The sample or extract was analyzed at a DF greater than 1.

Exception Summary:

Analysis Locations:

All analyses performed in Holt.

Ms. Kaitlyn Hunt
Arcadis U.S., Inc. - Novi
28550 Cabot Drive
Suite 500
Novi, MI 48377

Dear Ms. Hunt,

Thank you for selecting Fibertec Environmental Services as your analytical laboratory. The samples you submitted have been analyzed in accordance with NELAC standards and the results compiled in the attached report. Any exceptions to NELAC compliance are noted in the report. These results apply only to those samples submitted. Please note TO-15 samples will be disposed of 7 calendar days after the reporting date. All other samples will be disposed of 30 days after the reporting date.

If you have any questions regarding these results or if we may be of further assistance to you, please contact me at (517) 699-0345.

Sincerely,

By Sue Ricketts at 2:28 PM, May 09, 2023

Definitions/ Qualifiers:

A: Spike recovery or precision unusable due to dilution.
B: The analyte was detected in the associated method blank.
E: The analyte was detected at a concentration greater than the calibration range, therefore the result is estimated.
J: The concentration is an estimated value.
M: Modified Method
U: The analyte was not detected at or above the reporting limit.
X: Matrix Interference has resulted in a raised reporting limit or distorted result.
W: Results reported on a wet-weight basis.
***:** Value reported is outside QC limits
D: The sample or extract was analyzed at a DF greater than 1.

Exception Summary:

Analysis Locations:

Definitions/ Qualifiers:

U: The analyte was not detected at or above the Reporting Limit (RL).
***:** Value reported is outside QC limits

Exception Summary:

Exceptions have been properly noted on reported results or affected samples have been scheduled for reanalysis when appropriate.

Novi, MI 48377

Dear Ms. Hunt,

Thank you for selecting Fibertec Environmental Services as your analytical laboratory. The samples you submitted have been analyzed in accordance with NELAC standards and the results compiled in the attached report. Any exceptions to NELAC compliance are noted in the report. These results apply only to those samples submitted. Please note TO-15 samples will be disposed of 7 calendar days after the reporting date. All other samples will be disposed of 30 days after the reporting date.

If you have any questions regarding these results or if we may be of further assistance to you, please contact me at (517) 699-0345.

Sincerely,

By Sue Ricketts at 1:14 PM, Sep 05, 2023

Definitions/ Qualifiers:

A: Spike recovery or precision unusable due to dilution.
B: The analyte was detected in the associated method blank.
E: The analyte was detected at a concentration greater than the calibration range, therefore the result is estimated.
J: The concentration is an estimated value.
M: Modified Method
U: The analyte was not detected at or above the reporting limit.
X: Matrix Interference has resulted in a raised reporting limit or distorted result.
W: Results reported on a wet-weight basis.
***:** Value reported is outside QC limits
D: The sample or extract was analyzed at a DF greater than 1.

Exception Summary:

V+ : Recovery in the associated continuing calibration verification sample (CCV) exceeds the upper control limit. Results may be biased high.

Analysis Locations:

All analyses performed in Holt.

Dear Ms. Hunt,

Thank you for selecting Fibertec Environmental Services as your analytical laboratory. The samples you submitted have been analyzed in accordance with NELAC standards and the results compiled in the attached report. Any exceptions to NELAC compliance are noted in the report. These results apply only to those samples submitted. Please note TO-15 samples will be disposed of 7 calendar days after the reporting date. All other samples will be disposed of 30 days after the reporting date.

If you have any questions regarding these results or if we may be of further assistance to you, please contact me at (517) 699-0345.

Sincerely,

By Jacob Sutherlund at 1:02 PM, Nov 06, 2023

Surrogate Summary

			Control Limits	Instrument	Batch	Run Time	Column	Inst. Method
4-Bromofluorobenzene(S)	**101**	%	80-120	VQ	VQ23J31A	10/31/2023 18:32	1	VQ400

Definitions/ Qualifiers:

A: Spike recovery or precision unusable due to dilution.
B: The analyte was detected in the associated method blank.
E: The analyte was detected at a concentration greater than the calibration range, therefore the result is estimated.
J: The concentration is an estimated value.
M: Modified Method
U: The analyte was not detected at or above the reporting limit.
X: Matrix Interference has resulted in a raised reporting limit or distorted result.
W: Results reported on a wet-weight basis.
***:** Value reported is outside QC limits
D: The sample or extract was analyzed at a DF greater than 1.

Exception Summary:

Analysis Locations:

All analyses performed in Holt.

Definitions/ Qualifiers:

U: The analyte was not detected at or above the Reporting Limit (RL).
***:** Value reported is outside QC limits

Exception Summary:

Exceptions have been properly noted on reported results or affected samples have been scheduled for reanalysis when appropriate.

Comments: Tablet deleted readings before 1100.
Well casing with j plug causes metal protective casing to catch and could cause a pinch point. Removed j plug and added plastic water bottle end as a temporary cap until well casing can be cut down and resurveyed.

Comments: The screened area has collapsed. Spread sheet states that the well is screened from 100-115 below grade. The total depth from grade is now 100'. In June of 2022 I measured the total depth at 104.75 which would have been 102.25 from grade. Today I measured the total depth at 102.5, which is 100' from grade.

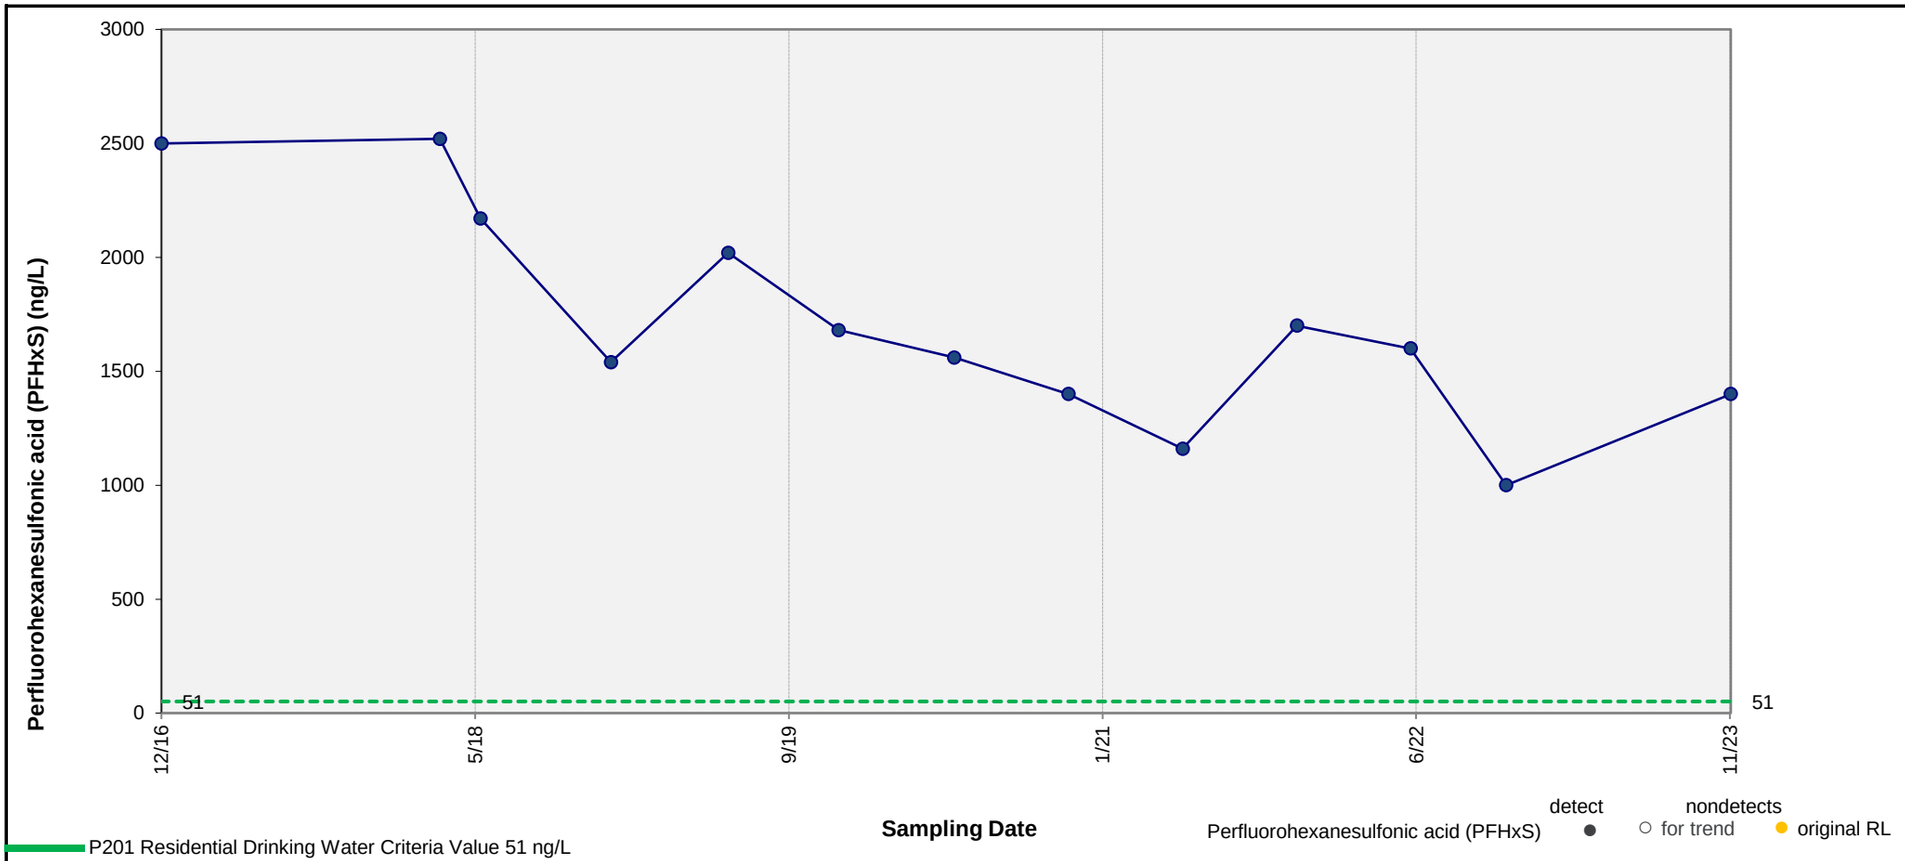
Abbreviations:

-- insufficient data for calculating statistics (n < 4) or not available
FOD = frequency of detection (# detects / # samples)
mean = arithmetic mean
SD = standard deviation



NST = no significant trend
NT = no trend
DWN = downward trend
UP = upward trend

Notes:

1. All analytical results for PFAS are in ng/L and VOCs are in µg/L.
   Result values less than 10 are reported to 2 significant figures; values greater than 10 are reported to 3 significant figures. P-values are reported to 3 decimal places.
2. Trend results are presented when at least seven samples, 50% detected values, and 25% exceedances in the last six samples are available. Significance of trends evaluated at 90% confidence (alpha = 0
3. Non-detects were assigned a common value less than the minimum detected value, equal to half the minimum reporting limit (RL) in the dataset (USEPA, 2009).
   If half the minimum RL was greater than the minimum detected value, then half the minimum detect was assigned.
4. Statistically significant trend defined as having p-value ≤ 0.1, or 90% confidence.
5a. MK and Sen's Trend results for datasets with fewer than 8 samples may not be reliable and should be treated with caution.
6. All well/analyte pairs were analyzed in 2023, except for 1,1-DCE at MW-14-59 and vinyl chloride at MW-03-06 and MW-14-60.
   These datasets are still included in the MK results since the wells were sampled in 2023.
