Re: Use of General Fill at the Linden Road Site
Genessee County, Michigan

Dear Mr. Innes:

This letter is to inform you (on behalf of General Motors [GM]) regarding a change in the type of material used as general fill during Phase 2 construction activities at the above-referenced site.

A soil management plan for the Linden Road Landfill site was submitted by Roy F. Weston, Inc. (WESTON®) to the Michigan Department of Environmental Quality (MDEQ) on 31 December 1997. According to this plan, GM intended to provide foundry sand from another GM facility for use as part of the cover material. However, in order to maintain schedule, GM decided to obtain and use virgin soil material from another off-site source to replace the foundry sand. Sample analytical results from the virgin soil material will be obtained consistent with the requirements presented in the specifications for the project.

If you have any questions or require additional information, please call me at (847) 918-4018.

Very truly yours,

ROY F. WESTON, INC.
