Certification Summary

Client: Conestoga-Rovers & Associates, Inc.
Project/Site: 12616-T02-006, OVAP Racer Elyria

TestAmerica Job ID: 240-41799-1

Laboratory: TestAmerica Canton

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Ohio VAP	State Program	5	CL0024	10-31-15

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
8260B		Water	1,1,2-Trichloro-1,2,2-trifluoroethane
8260B		Water	Cyclohexane
8260B		Water	Methyl acetate
8260B		Water	Methylcyclohexane

Project/Site: 12616-T02, Racer Elyria

TestAmerica Job ID: 240-6661-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
X	Surrogate is outside control limits
F	MS or MSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 12616-T02, Racer Elyria

Report Number: 240-6661-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 12/08/2011; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 3.7 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 12/13/2011 and 12/14/2011.

Methylene Chloride was detected in method blank MB 240-26569/5 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Methylene Chloride was detected in method blank MB 240-26699/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. Methylene Chloride was detected in method blank MB 240-26857/5 at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged. 1,2,4-Trichlorobenzene was detected in method blank MB 240-26857/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,1-Dichloroethane, Benzene and Chloroform failed the recovery criteria high for LCS 240-26699/4. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Job ID: 240-6661-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

1,1-Dichloroethane, 1,2-Dichloropropane, 2-Butanone (MEK), 4-Methyl-2-pentanone (MIBK) and Methyl acetate failed the recovery criteria high for LCS 240-26857/4. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

Chloroform failed the recovery criteria high for the MS of sample WG-12616-120511-DN-16MS (240-6661-15) in batch 240-26569.

Samples WG-12616-120611-DN-27 (240-6661-26)[20X] and WG-12616-120711-DN-31 (240-6661-30)[4X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Surrogate Legend

12DCE = 1,2-Dichloroethane-d4 (Surr)

Surrogate Summary

Client: Conestoga-Rovers & Associates, Inc.
Project/Site: 12616-T02, Racer Elyria

TestAmerica Job ID: 240-6661-1

BFB = 4-Bromofluorobenzene (Surr)
TOL = Toluene-d8 (Surr)
DBFM = Dibromofluoromethane (Surr)

Client: Conestoga-Rovers & Associates, Inc.
Project/Site: 12616-T02, Racer Elyria

TestAmerica Job ID: 240-6661-1

Method: 8260B - Volatile Organic Compounds (GC/MS)

Lab Sample ID: MB 240-26569/5
Matrix: Water
Analysis Batch: 26569

Client Sample ID: Method Blank
Prep Type: Total/NA

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
X	Surrogate is outside control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC Semi VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
U	Indicates the analyte was analyzed for but not detected.

General Chemistry

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 12616-T02, Racer Elyria

Report Number: 240-7896-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 01/24/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.5, 3.1C.

TCLP VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP volatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 1311/8260B. The samples were leached on 01/31/2012 and 02/02/2012 and analyzed on 02/01/2012 and 02/07/2012.

No difficulties were encountered during the VOCs analyses.

All quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 01/30/2012.

1,2,4-Trichlorobenzene was detected in method blank MB 240-31943/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above

Job ID: 240-7896-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

the MDL and/or RL, the result has been “B” flagged.

The presence of the '4' qualifier in the data indicates analytes where the concentration in the unspiked sample exceeded four times the spiking amount.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

TCLP SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Methods 1311/8270C. The samples were leached on 01/31/2012, prepared on 02/01/2012 and analyzed on 02/02/2012.

No difficulties were encountered during the SVOCs analyses.

All quality control parameters were within the acceptance limits.

SEMIVOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for semivolatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8270C. The samples were prepared on 01/25/2012 and analyzed on 01/27/2012.

Bis(2-ethylhexyl) phthalate was detected in method blank MB 240-31311/18-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

2,4,6-Tribromophenol (Surr) failed the surrogate recovery criteria low for WG-12616-012312-DN-02 (240-7896-4). The laboratory's SOP allows one acid surrogate and/or one base surrogate to be outside acceptance limits; therefore, re-extraction/re-analysis was not performed.

No other difficulties were encountered during the SVOC analyses.

All other quality control parameters were within the acceptance limits.

TCLP CHLORINATED PESTICIDES

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP chlorinated pesticides in accordance with EPA SW-846 Methods 1311/ 8081A. The samples were leached on 01/31/2012, and prepared and analyzed on 02/01/2012.

The opening and closing continuing calibration verifications (CCVs) for Technical Chlordane associated with batch 32235 were recovered above the upper control limit. The samples associated with these CCVs were not detected above the reporting limit for Technical Chlordane; therefore the data have been reported. S-12616-012312-DN-01 (240-7896-1), S-12616-012312-DN-02 (240-7896-2).

No difficulties were encountered during the pesticides analyses.

All quality control parameters were within the acceptance limits.

TCLP CHLORINATED HERBICIDES

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP chlorinated herbicides in accordance with EPA SW-846 Methods 1311/ 8151A. The samples were leached on 01/31/2012, prepared on 02/01/2012 and analyzed on 02/02/2012.

No difficulties were encountered during the herbicides analyses.

Job ID: 240-7896-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

All quality control parameters were within the acceptance limits.

TCLP METALS (ICP)

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP metals (ICP) in accordance with EPA SW-846 Methods 1311/ 6010B. The samples were leached on 01/31/2012, prepared on 02/02/2012 and analyzed on 02/03/2012.

Barium, Lead and Selenium were detected in method blank LB 240-32073/1-D at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

TOTAL RECOVERABLE METALS (ICP)

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for total recoverable metals (ICP) in accordance with EPA SW-846 Method 6010B. The samples were prepared on 02/03/2012 and 02/06/2012 and analyzed on 02/06/2012, 02/07/2012 and 02/08/2012.

Antimony was detected in method blank MB 240-32539/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Several analytes were detected in method blank MB 240-32539/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Antimony was detected in method blank MB 240-32809/1-A at a level exceeding the reporting limit. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged. Several analytes were detected in method blank MB 240-32809/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

No other difficulties were encountered during the metals analyses.

All other quality control parameters were within the acceptance limits.

HEXAVALENT CHROMIUM

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for hexavalent chromium in accordance with EPA SW-846 Method 7196A. The samples were analyzed on 01/24/2012.

No difficulties were encountered during the hexavalent chromium analyses.

All quality control parameters were within the acceptance limits.

TCLP MERCURY

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for TCLP mercury in accordance with EPA SW-846 Methods 1311/7470A. The samples were leached on 01/31/2012, prepared on 02/02/2012 and analyzed on 02/03/2012.

No difficulties were encountered during the mercury analyses.

All quality control parameters were within the acceptance limits.

TOTAL MERCURY

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for total mercury in accordance with EPA SW-846 Methods 7470A. The samples were prepared and analyzed on 02/03/2012.

No difficulties were encountered during the mercury analyses.

Job ID: 240-7896-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

All quality control parameters were within the acceptance limits.

FLASHPOINT
Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for flashpoint in accordance with EPA SW-846 Method 1010. The samples were analyzed on 01/26/2012.

No difficulties were encountered during the flashpoint analyses.

All quality control parameters were within the acceptance limits.

FLASHPOINT
Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for flashpoint in accordance with EPA SW-846 1010. The samples were analyzed on 01/26/2012.

No difficulties were encountered during the flashpoint analyses.

All quality control parameters were within the acceptance limits.

TOTAL AND AMENABLE CYANIDE
Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for total and amenable cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 01/31/2012.

Cyanide, Total was detected in method blank MB 240-32054/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged “J”. If the associated sample reported a result above the MDL and/or RL, the result has been “B” flagged.

No other difficulties were encountered during the cyanide analyses.

All other quality control parameters were within the acceptance limits.

TOTAL CYANIDE
Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for total cyanide in accordance with EPA SW-846 Method 9012A. The samples were prepared and analyzed on 01/25/2012.

No difficulties were encountered during the cyanide analyses.

All quality control parameters were within the acceptance limits.

SULFIDE
Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for sulfide in accordance with EPA SW-846 Method 9034. The samples were prepared and analyzed on 01/25/2012.

No difficulties were encountered during the sulfide analyses.

All quality control parameters were within the acceptance limits.

SULFIDE
Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for sulfide in accordance with EPA SW-846 Method 9034. The samples were prepared and analyzed on 01/25/2012.

No difficulties were encountered during the sulfide analyses.

All quality control parameters were within the acceptance limits.

Job ID: 240-7896-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

PH

Samples WG-12616-012312-DN-01 (240-7896-3) and WG-12616-012312-DN-02 (240-7896-4) were analyzed for pH in accordance with EPA SW-846 Method 9040C. The samples were analyzed past the method recommended 15 minute holding time on 01/24/2012.

No difficulties were encountered during the pH analyses.

All quality control parameters were within the acceptance limits.

PH

Samples S-12616-012312-DN-01 (240-7896-1) and S-12616-012312-DN-02 (240-7896-2) were analyzed for pH in accordance with EPA SW-846 Method 9045C. The samples were analyzed on 01/24/2012.

No difficulties were encountered during the pH analyses.

All quality control parameters were within the acceptance limits.

TestAmerica Project Number: G2A250459
PO/Contract: SUB NC 240-7896-1

Denise Heckler
TestAmerica North Canton
4101 Shuffel Street NW
North Canton, OH 44720

Dear Ms. Heckler,

This report contains the analytical results for the samples received under chain of custody by TestAmerica on January 25, 2012. These samples are associated with your 240-7896 project.

The test results in this report meet all NELAC requirements for parameters that accreditation is required or available. Any exceptions to NELAC requirements are noted in the case narrative. The case narrative is an integral part of this report.

If you have any questions, please feel free to call me at (916) 374-4384.

Sincerely,

Karen Dahl
Project Manager

Case Narrative

TestAmerica West Sacramento Project Number G2A250459

General Comments
Replacement sample volume was received on 2/17/12.

WATER, 8290, Dioxins/Furans
Sample(s): 1, 2
Some analytes for these samples & the method blank have been qualified with a "Q" flag since their ion abundance ratios did not meet acceptance criteria. These analytes have been reported as "estimated maximum possible concentrations" (EMPCs) since their quantitation was based on theoretical ion abundance ratios.

There were no other anomalies associated with this project.

QC Parameter Definitions

QC Batch: The QC batch consists of a set of up to 20 field samples that behave similarly (i.e., same matrix) and are processed using the same procedures, reagents, and standards at the same time.

Method Blank: An analytical control consisting of all reagents, which may include internal standards and surrogates, and is carried through the entire analytical procedure. The method blank is used to define the level of laboratory background contamination.

Laboratory Control Sample and Laboratory Control Sample Duplicate (LCS/LCSD): An aliquot of blank matrix spiked with known amounts of representative target analytes. The LCS (and LCSD as required) is carried through the entire analytical process and is used to monitor the accuracy of the analytical process independent of potential matrix effects. If an LCSD is performed, it may also be used to evaluate the precision of the process.

Duplicate Sample (DU): Different aliquots of the same sample are analyzed to evaluate the precision of an analysis.

Surrogates: Organic compounds not expected to be detected in field samples, which behave similarly to target analytes. These are added to every sample within a batch at a known concentration to determine the efficiency of the sample preparation and analytical process.

Matrix Spike and Matrix Spike Duplicate (MS/MSD): An MS is an aliquot of a matrix fortified with known quantities of specific compounds and subjected to an entire analytical procedure in order to indicate the appropriateness of the method for a particular matrix. The percent recovery for the respective compound(s) is then calculated. The MSD is a second aliquot of the same matrix as the matrix spike, also spiked, in order to determine the precision of the method.

Isotope Dilution: For isotope dilution methods, isotopically labeled analogs (internal standards) of the native target analytes are spiked into the sample at time of extraction. These internal standards are used for quantitation, and monitor and correct for matrix effects. Since matrix effects on method performance can be judged by the recovery of these analogs, there is little added benefit of performing MS/MSD for these methods. MS/MSD are only performed for client or QAPP requirements.

Control Limits: The reported control limits are either based on laboratory historical data, method requirements, or project data quality objectives. The control limits represent the estimated uncertainty of the test results.

Sample Summary

TestAmerica West Sacramento Project Number G2A250459

WO#	Sample #	Client Sample ID	Sampling Date	Received Date
MQEJP	1	WG-12616-012312-DN-01	1/23/2012 03:00 PM	1/25/2012 09:15 AM

Notes(s):

- The analytical results of the samples listed above are presented on the following pages.
- All calculations are performed before rounding to avoid round-off errors in calculated results.
- Results noted as "ND" were not detected at or above the stated limit.
- This report must not be reproduced, except in full, without the written approval of the laboratory.
- Results for the following parameters are never reported on a dry weight basis: color, corrosivity, density, flashpoint, ignitability, layers, odor, paint filter test, pH, porosity, pressure, reactivity, redox potential, specific gravity, spot tests, solids, solubility, temperature, viscosity, and weight.

Project/Site: 12616-T02, Racer Elyria

TestAmerica Job ID: 240-8929-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
*	LCS or LCSD exceeds the control limits
F	MS or MSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job ID: 240-8929-1

Laboratory: TestAmerica North Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 12616-T02, Racer Elyria

Report Number: 240-8929-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

A revised chain of custody was received on March 12, 2012.

RECEIPT

The samples were received on 03/03/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 1.9 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 03/07/2012 and 03/09/2012.

1,2,4-Trichlorobenzene was detected in method blank MB 240-36298/5 at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been flagged "J". If the associated sample reported a result above the MDL and/or RL, the result has been "B" flagged.

1,1,2-Trichloro-1,2,2-trifluoroethane failed the recovery criteria low for LCS 240-36073/4. Several analytes failed the recovery criteria high.

1,2-Dichloropropane and Dichlorobromomethane failed the recovery criteria high for the MS/MSD of sample WG-12616-022812-DN-01(240-8929-1) in batch 240-36073. 1,2-Dichloropropane and Dichlorobromomethane failed the recovery criteria high in the MSD.

Job ID: 240-8929-1 (Continued)

Laboratory: TestAmerica North Canton (Continued)

Samples WG-12616-030212-DN-23 (240-8929-23)[14.29X], WG-12616-030212-DN-26 (240-8929-26)[1.67X] and WG-12616-030212-DN-30 (240-8929-30)[1.67X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Method Summary

Client: Conestoga-Rovers & Associates, Inc.

2. Were custody seals on the outside of the cooler(s)? If Yes Quantity____	Yes (No)	
-Were custody seals on the outside of the cooler(s) signed & dated?	Yes No (NA)	
-Were custody seals on the bottle(s)?	Yes (No)	
3. Shippers' packing slip attached to the cooler(s)?	(Yes)	No
4. Did custody papers accompany the sample(s)?	(Yes)	No
5. Were the custody papers relinquished & signed in the appropriate place?	(Yes)	No
6. Did all bottles arrive in good condition (Unbroken)?	(Yes)	No
7. Could all bottle labels be reconciled with the COC?	(Yes)	No
8. Were correct bottle(s) used for the test(s) indicated?	(Yes)	No
9. Sufficient quantity received to perform indicated analyses?	(Yes)	No
10. Were sample(s) at the correct pH upon receipt?	Yes No (NA)	
11. Were VOAs on the COC?	(Yes) (No)	
12. Were air bubbles >6 mm in any VOA vials?	Yes (No)	NA
13. Was a trip blank present in the cooler(s)?	(Yes)	No

Contacted PM DDH Date 3-5-12 by MS via Verbal (Voice Mail) Other

Concerning #14

14. CHAIN OF CUSTODY & SAMPLE DISCREPANCIES

Rec'd 4x40 TB not on COC will log

15. SAMPLE CONDITION

Sample(s)_____ were received after the recommended holding time had expired.

Sample(s)_____ were received in a broken container.

Sample(s)_____ were received with bubble >6 mm in diameter. (Notify PM)

16. SAMPLE PRESERVATION

Sample(s) _____ were further preserved in Sample Receiving to meet recommended pH level(s). Nitric Acid Lot# 110410-HNO3; Sulfuric Acid Lot# 041911-H2SO4; Sodium Hydroxide Lot# 121809 - NaOH; Hydrochloric Acid Lot# 041911-HCl; Sodium Hydroxide and Zinc Acetate Lot# 100108-(CH3COO)2ZN/NaOH. What time was preservative added to sample(s)? _____

Question	Answer	Comment
Radioactivity either was not measured or, if measured, is at or below background	N/A	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	1.9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Definitions/Glossary

Client: Conestoga-Rovers & Associates, Inc.
Project/Site: 12616-T02, Racer Elyria

TestAmerica Job ID: 240-8985-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F	MS or MSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
☼	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DL, RA, RE, IN	Indicates a Dilution, Reanalysis, Re-extraction, or additional Initial metals/anion analysis of the sample
EDL	Estimated Detection Limit
EPA	United States Environmental Protection Agency
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RL	Reporting Limit
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Laboratory: TestAmerica North Canton

Narrative

CASE NARRATIVE

Client: Conestoga-Rovers & Associates, Inc.

Project: 12616-T02, Racer Elyria

Report Number: 240-8985-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica North Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 03/07/2012; the samples arrived in good condition, properly preserved and on ice. The temperature of the coolers at receipt was 2.7 C.

VOLATILE ORGANIC COMPOUNDS (GC-MS)

Samples were analyzed for volatile organic compounds (GC-MS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 03/12/2012.

Trichlorofluoromethane failed the recovery criteria high for the MS of sample WG-12616-030512-DN-32MS (240-8985-2) in batch 240-36507.

No other difficulties were encountered during the VOCs analyses.

All other quality control parameters were within the acceptance limits.

Method Summary

MEMORANDUM

TO:	Andrew Lavine	REF. NO.:	012616
FROM:	Angela Bown/bjw/3-NF	DATE:	September 22, 2011
CC:	Karen Partington		
RE:	Data Quality Assessment and Validation Remedial Investigation-Soil Sampling General Motors Corporation Elyria, Ohio August 2011		

INTRODUCTION

The following details a quality assessment and validation of the analytical data resulting from the August 2011 collection of 30 soil samples and two (2) quality control samples from the General Motors Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3A and Table 3B present the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with following guidance documents:

i. "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999

ii. "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Review", EPA-540/R-94/013, February 1994.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC), dioxins, and inorganics below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged

these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples summarized in Table 4 were qualified due to violation of sample holding time periods. The remaining samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

The samples presented in Table 5 were qualified due to laboratory contamination. The remaining method blank samples were reported to be free from detectable levels of target analytes or did not warrant qualification.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

Some surrogate recoveries could not be measured or evaluated due to dilutions required to successfully analyze the samples. No qualification of these samples was required. The surrogate recovery acceptance criteria were met for all samples that could be evaluated.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The inorganic control limits are defined by the methods and the NFG, which require recoveries between 75 to 125 percent with RPDs less than 35 percent for soil samples. The samples selected for MS/MSD analysis are identified in Table 1.

In some sample batches, no Site-specific samples were utilized as MS/MSDs; precision and accuracy were verified by the analysis of the laboratory control sample/laboratory control duplicate (LCS/LCD). Qualification of samples associated with these MS/MSDs was not performed. The samples that were

qualified or rejected due to violation of MS/MSD percent recovery criteria are outlined in Table 6. The MS/MSD percent recoveries and associated RPD acceptance criteria were met in the remaining sample analyses.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL DUPLICATE ANALYSIS

The laboratory control sample and laboratory control duplicate (LCS/LCD) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS/LCD percent recoveries were evaluated against method and laboratory established control limits.

The LCS/LCD percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved with the exception of samples presented with qualifiers in Table 7.

Laboratory precision was verified by the relative percent difference (RPD) of the LCS/LCD when a matrix spike/matrix spike duplicate was not analyzed.

The RPDs were within the laboratory control limits, indicating that an acceptable level of overall laboratory precision was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of two (2) rinse blank samples and two (2) field duplicate sample sets.

Rinse Blanks

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blank samples identified in Table 1 were collected and analyzed.

The rinse blank samples were reported with parameters detected but the associated sample concentrations were either non-detect or exceed five (5) or 10 (for common laboratory contaminants) times the rinse blank result; therefore, no qualification was required. The samples that were qualified due to rinsate blank contamination are summarized in Table 8.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is two times the RL value.

Table 9 presents the RPDs of detected analytes in duplicate sample sets with qualifiers.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted with the exception of antimony data were rejected in a number of samples due to MS/MSD recovery violation.

REVISED
March 16, 2012

RE: Data Quality Assessment and Validation
Remedial Investigation-Soil Sampling
RACER Trust
Elyria, Ohio
August 2011

INTRODUCTION

The following details a quality assessment and validation of the analytical data resulting from the August 2011 collection of 30 soil samples and two (2) quality control samples from the RACER Trust Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3A and Table 3B present the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with following guidance documents:

i. "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999

ii. "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Review", EPA-540/R-94/013, February 1994.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOC), semi-volatile organic compounds (SVOC), dioxins, and inorganics below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged

these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples summarized in Table 4 were qualified due to violation of sample holding time periods. The remaining samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

The samples presented in Table 5 were qualified due to laboratory contamination. The remaining method blank samples were reported to be free from detectable levels of target analytes or did not warrant qualification.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

Some surrogate recoveries could not be measured or evaluated due to dilutions required to successfully analyze the samples. No qualification of these samples was required. The surrogate recovery acceptance criteria were met for all samples that could be evaluated.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The inorganic control limits are defined by the methods and the NFG, which require recoveries between 75 to 125 percent with RPDs less than 35 percent for soil samples. The samples selected for MS/MSD analysis are identified in Table 1.

In some sample batches, no Site-specific samples were utilized as MS/MSDs; precision and accuracy were verified by the analysis of the laboratory control sample/laboratory control duplicate (LCS/LCD). Qualification of samples associated with these MS/MSDs was not performed. The samples that were

qualified or rejected due to violation of MS/MSD percent recovery criteria are outlined in Table 6. The MS/MSD percent recoveries and associated RPD acceptance criteria were met in the remaining sample analyses.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL DUPLICATE ANALYSIS

The laboratory control sample and laboratory control duplicate (LCS/LCD) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS/LCD percent recoveries were evaluated against method and laboratory established control limits.

The LCS/LCD percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved with the exception of samples presented with qualifiers in Table 7.

Laboratory precision was verified by the relative percent difference (RPD) of the LCS/LCD when a matrix spike/matrix spike duplicate was not analyzed.

The RPDs were within the laboratory control limits, indicating that an acceptable level of overall laboratory precision was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of two (2) rinse blank samples and two (2) field duplicate sample sets.

Rinse Blanks

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blank samples identified in Table 1 were collected and analyzed.

The rinse blank samples were reported with parameters detected but the associated sample concentrations were either non-detect or exceed five (5) or 10 (for common laboratory contaminants) times the rinse blank result; therefore, no qualification was required. The samples that were qualified due to rinsate blank contamination are summarized in Table 8.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is two times the RL value.

Table 9 presents the RPDs of detected analytes in duplicate sample sets with qualifiers.

MISCELLANEOUS

This report has been revised because the original results for hexavalent chromium were not dry weight corrected.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted with the exception of cyanide data were rejected in a number of samples due to MS/MSD recovery violation.

REF. NO.: 012616

FROM: Angela Bown/bjw/4-NF

DATE: September 26, 2011

CC: Karen Partington

RE: Data Quality Assessment and Validation
Remedial Investigation-Groundwater Sampling
General Motors Corporation
Elyria, Ohio
August 2011

INTRODUCTION

The following details a quality assessment and validation of the analytical data resulting from the August 2011 collection of 38 water samples including quality control samples from the General Motors Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3 presents the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOC) below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

The method blank samples were reported to be free from detectable levels of target analytes.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

The surrogate recovery acceptance criteria were met for all samples.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The samples selected for MS/MSD analysis are identified in Table 1.

The MS/MSD percent recoveries and associated RPD acceptance criteria were met in the sample analyses.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL DUPLICATE ANALYSIS

The laboratory control sample and laboratory control duplicate (LCS/LCD) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS/LCD percent recoveries were evaluated against method and laboratory established control limits.

The LCS/LCD percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved.

Laboratory precision was verified by the relative percent difference (RPD) of the LCS/LCD when a matrix spike/matrix spike duplicate was not analyzed.

The RPDs were within the laboratory control limits, indicating that an acceptable level of overall laboratory precision was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of two (2) rinse blank samples, two (2) trip blank samples, and two (2) field duplicate sample sets.

Rinse Blanks & Trip Blanks

To monitor potential cross-contamination of VOC during aqueous sample transportation and storage, a trip blank was submitted to the laboratory for VOC analysis with each shipping cooler containing multiple samples.

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blanks were collected and analyzed.

Target compounds were detected in the trip blank and rinse blank samples. Table 4 presents the sample data that were qualified due to analyte concentrations in the trip and rinse blank samples.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one times the RL value.

The data indicate that an adequate level of precision was achieved for the sampling event.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted herein.

RE: Data Quality Assessment and Validation
Remedial Investigation-Groundwater Sampling
General Motors Corporation
Elyria, Ohio
December 2011

INTRODUCTION

The following details a quality assessment and validation of the analytical data resulting from the December 2011 collection of 40 water samples including quality control samples from the General Motors Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3 presents the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOC) below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

Most method blank samples were reported to be free from detectable levels of target analytes. Table 4 presents the sample results that were qualified due to method blank contamination.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

The surrogate recovery acceptance criteria were met for all samples.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The samples selected for MS/MSD analysis are identified in Table 1.

The MS/MSD percent recoveries and associated RPD acceptance criteria were met or did not warrant qualification.

LABORATORY CONTROL SAMPLE ANALYSIS

The laboratory control sample (LCS) analysis serves as a monitor of the overall performance in all steps of the sample analysis and is analyzed with each sample batch. The LCS percent recoveries were evaluated against method and laboratory established control limits.

The LCS percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of two (2) rinse blank samples, one (1) trip blank sample, and three (3) field duplicate sample sets.

Rinse Blanks & Trip Blanks

To monitor potential cross-contamination of VOC during aqueous sample transportation and storage, a trip blank was submitted to the laboratory for VOC analysis with each shipping cooler containing multiple samples.

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blanks were collected and analyzed.

Target compounds were detected in the trip blank and rinse blank samples. Table 5 presents the sample data that were qualified due to analyte concentrations in the trip and rinse blank samples.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one times the RL value.

The data indicate that an adequate level of precision was achieved for the sampling event.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted herein.

Quarterly Groundwater Sampling
RACER Trust
Elyria, Ohio
February-March 2012

The following details a quality assessment and validation of the analytical data resulting from the February-March 2012 collection of 41 water samples including quality control samples from the RACER Trust Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3 presents the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOCs) below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

Most method blank samples were reported to be free from detectable levels of target analytes. Table 4 presents the sample results that were qualified due to analyte concentrations in the method blank.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

The surrogate recovery acceptance criteria were met for all samples.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The samples selected for MS/MSD analysis are identified in Table 1.

The MS/MSD percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL DUPLICATE ANALYSIS

The laboratory control sample and laboratory control duplicate (LCS/LCD) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS/LCD percent recoveries were evaluated against method and laboratory established control limits.

Most LCS/LCD percent recoveries were within the laboratory control limits or did not warrant qualification, indicating that an acceptable level of overall performance was achieved. Table 5 presents the data that were qualified due to outlying LCS/LCD percent recoveries.

Laboratory precision was verified by the relative percent difference (RPD) of the LCS/LCD when a matrix spike/matrix spike duplicate was not analyzed.

The RPDs were within the laboratory control limits, indicating that an acceptable level of overall laboratory precision was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of two (2) rinse blank samples, one (1) trip blank sample, and four (4) field duplicate sample sets.

Rinse Blanks & Trip Blanks

To monitor potential cross-contamination of VOC during aqueous sample transportation and storage, a trip blank was submitted to the laboratory for VOC analysis with each shipping cooler containing multiple samples.

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blanks were collected and analyzed.

Target compounds were detected in the trip blank and rinse blank samples. Qualification of the associated sample results was not necessary because the results were either non-detect or were greater than 5 or 10 times the blank result.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one times the RL value.

The data indicate that an adequate level of precision was achieved for the sampling event.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted herein.

RE: Data Quality Assessment and Validation
Quarterly Groundwater Sampling
RACER Trust
Elyria, Ohio
June 2012

INTRODUCTION

The following details a quality assessment and validation of the analytical data resulting from the June 2012 collection of 41 water samples including quality control samples from the RACER Trust Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, quality control samples, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica Laboratories, Inc in North Canton, Ohio (TestAmerica) in accordance with the methodologies presented in Table 2. Table 3 presents the validated sample results.

The quality control criteria used to assess the data were established by the methods and the quality assurance project plan (QAPP). Application of quality assurance criteria was consistent with "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", EPA-540/R-99/008, October 1999.

These guidelines are collectively referred to as "NFGs" in this Memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of volatile organic compounds (VOCs) below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). The laboratory flagged these sample concentrations with a "J". These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

The samples were prepared and/or analyzed with the specified holding time periods.

The samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch and target analytes should be non-detect.

Most method blank samples were reported to be free from detectable levels of target analytes. Qualification of the associated sample results was not necessary because the results were non-detects.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

The surrogate recovery acceptance criteria were met for all samples.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE ANALYSES

To assess the long term accuracy and precision of the analytical methods on various matrices, matrix spike/matrix spike duplicate (MS/MSD) percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. The samples selected for MS/MSD analysis are identified in Table 1.

Most MS/MSD percent recoveries were within the laboratory control limits. Table 4 presents the sample data that were qualified due to outlying MS/MSD recoveries.

LABORATORY CONTROL SAMPLE/LABORATORY CONTROL DUPLICATE ANALYSIS

The laboratory control sample and laboratory control duplicate (LCS/LCD) analyses serve as a monitor of the overall performance in all steps of the sample analysis and are analyzed with each sample batch. The LCS/LCD percent recoveries were evaluated against method and laboratory established control limits.

All LCS/LCD percent recoveries were within the laboratory control limits, indicating that an acceptable level of overall performance was achieved.

Laboratory precision was verified by the relative percent difference (RPD) of the LCS/LCD when a matrix spike/matrix spike duplicate was not analyzed.

The RPDs were within the laboratory control limits, indicating that an acceptable level of overall laboratory precision was achieved.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC) SAMPLES

The field quality assurance/quality control consisted of one (1) rinse blank sample, one (1) trip blank sample, and two (2) field duplicate sample sets.

Rinse Blanks & Trip Blanks

To monitor potential cross-contamination of VOC during aqueous sample transportation and storage, a trip blank was submitted to the laboratory for VOC analysis with each shipping cooler containing multiple samples.

To assess the efficiency of field decontamination procedures and cleanliness of sample containers, the rinse blanks were collected and analyzed.

Target compounds were detected in the trip blank and rinse blank samples. Table 5 presents the sample results that were qualified due to concentrations in the trip and rinse blanks.

Field Duplicates

Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is one times the RL value.

The data indicate that an adequate level of precision was achieved for the sampling event.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision, based on the provided information, and may be used with the qualifications noted herein with the exception of 2-butanone in sample GW-12616-062212-DN-40 which was rejected due to excessive MS/MSD recovery failure.

RE: Data Quality Assessment and Reduced Validation
Soil Sampling
General Motors Corporation
Elyria, Ohio
June 2012

INTRODUCTION

The following details a quality assessment and reduced validation of the analytical data resulting from the June 2012 collection of 5 soil including quality control samples from the Elyria Site in Elyria, Ohio. The sample summary detailing sample identification, sample location, and analytical parameters is presented in Table 1. Sample analysis was completed at TestAmerica, Inc. (TestAmerica) in North Canton, Ohio, in accordance with the methodologies presented in Table 2. The validated sample results are presented in Table 3.

The quality control criteria used to assess the data were established by the methods. Application of quality assurance criteria was consistent with following guidance document: "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) EPA-540/R-99/008, October 1999.

This guideline is referred to as "Guideline" in this memorandum.

SAMPLE QUANTITATION

The laboratory reported detected concentrations of organics below the laboratory's practical quantitation limit (PQL)/report limit (RL) but above the laboratory's method detection limit (MDL). These concentrations should be qualified as estimated (J) values unless qualified otherwise in this memorandum.

SAMPLE PRESERVATION AND HOLDING TIMES

Sample holding time periods and preservation requirements are presented in the methods.

Most samples were prepared and/or analyzed within the specified holding time periods. Table 4 presents the sample results that were qualified due to hold time exceedances.

All samples were shipped and maintained in accordance with the samples preservation requirements.

METHOD BLANK SAMPLES

Method blank samples are prepared from a purified sample matrix and are processed concurrently with investigative samples to assess the presence and the magnitude of sample contamination introduced during sample analysis. Method blank samples are analyzed at a minimum frequency of one per analytical batch, and target analytes should be non-detect.

Target analytes were detected in the method blank samples. Qualification of the sample data was not necessary if the associated sample results were greater than five times the value of the blank sample. Table 5 presents the data that were qualified due to method blank contamination.

The remaining method blank samples were reported to be free from detectable levels of target analytes or did not warrant qualification of the associated sample results.

SURROGATE COMPOUNDS – ORGANIC ANALYSES

Individual sample performance for organic analyses was monitored by assessing the results of surrogate compound percent recoveries. Surrogate percent recoveries are reviewed against the laboratory developed control limits provided in the analytical report.

The surrogate recovery acceptance criteria were met for all samples with the exception of the sample results presented with qualifiers in Table 6.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To assess the long-term accuracy and precision of the analytical methods on various matrices, MS/MSD percent recoveries and the relative percent difference (RPD) of the concentrations were determined. The organic MS/MSD percent recovery and RPD control limits are established by the laboratory. No site-specific samples were selected for MS/MSD spiking.

LABORATORY CONTROL SAMPLE (LCS) ANALYSIS

The LCS analysis serves as a monitor of the overall performance in all steps of the sample analysis and is analyzed with each sample batch. The LCS percent recoveries were evaluated against method and laboratory established control limits.

Most LCS percent recoveries were within the laboratory control limits indicating that an acceptable level of overall performance was achieved. The LCS recoveries for 1,1,2-trichloroethane and 1,2-dichloropropane

recovered with a high bias. The associated sample results were non-detect and qualification of the data was not necessary.

FIELD QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

The field QA/QC samples consisted of one field duplicate sample set.

Field Duplicates
Overall precision for the sampling event and laboratory procedures was monitored using the results of the field duplicate sample sets. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the RL, the evaluation criteria is two times the RL value for soil samples.

The data indicate that an adequate level of precision was achieved for the sampling event.

OVERALL ASSESSMENT

The data were found to exhibit acceptable levels of accuracy and precision based on the provided information and may be used with the qualifications noted herein.

MEMORANDUM

TO:	Andrew LaVine	REF. NO.:	12616-T02
FROM:	Angela Bown/bjw/10-NF *AB/bjw*	DATE:	April 25, 2013
RE:	**Analytical Results and Reduced Validation Quarterly Groundwater Monitoring RACER-Elyria Site Elyria, Ohio March - April 2013**	**E-Mail and Hard Copy if Requested**	

INTRODUCTION

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Quarterly Groundwater Monitoring Program at the RACER-Elyria Site during March and April 2013. Samples were submitted to TestAmerica Laboratories, Inc. (TA) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2. The validated analytical results are summarized in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 2 and the documents entitled "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Most method blank results were non-detect. Table 4 presents the sample results that were qualified due to analyte concentrations in the method blanks.

SURROGATE SPIKE RECOVERIES – ORGANIC ANALYSES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the acceptance criteria.

LABORATORY CONTROL SAMPLE (LCS) ANALYSIS

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

The LCSs contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the measurement procedures and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration (greater than 4 times), the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

The MS/MSD samples were spiked with all compounds of interest. Most percent recoveries and RPD values were within the laboratory control limits. Table 5 presents the sample results that were qualified due to outlying MS/MSD recoveries.

FIELD QA/QC SAMPLES

The field QA/QC consisted of one (1) trip blank sample, one (1) rinse blank sample, and two (2) field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, one trip blank was submitted to the laboratory for VOC analysis. Most results were non-detect for the compounds of interest. Table 6 presents the sample results that were qualified due to analyte concentrations in the trip blank sample.

Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the site, and cleanliness of sample containers, a rinse blank was submitted for analysis, as identified in Table 1. Target analytes were detected in the rinse blank sample. The associated sample results were not affected because the results were either non-detect or were greater than 5 times the blank value.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, two (2) field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criterion is one times the RL value for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the RL but greater than the MDL were qualified as estimated (J) in Table 3 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the RL in Table 3.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted herein.

MEMORANDUM

TO:	Andrew LaVine	REF. NO.:	12616-T02
FROM:	Angela Bown/bjw/11-NF *AB/bjw*	DATE:	July 29, 2013
RE:	**Analytical Results and Reduced Validation Quarterly Groundwater Monitoring RACER-Elyria Site Elyria, Ohio June 2013**	**E-Mail and Hard Copy if Requested**	

INTRODUCTION

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Quarterly Groundwater Monitoring Program at the RACER-Elyria Site during June 2013. Samples were submitted to TestAmerica Laboratories, Inc. (TA) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. A summary of the analytical methodology is presented in Table 2. The validated analytical results are summarized in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 2 and the documents entitled "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 2. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Most method blank results were non-detect. Table 4 presents the sample results that were qualified due to analyte concentrations in the method blanks.

SURROGATE SPIKE RECOVERIES – ORGANIC ANALYSES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compound (VOC) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries met the acceptance criteria.

LABORATORY CONTROL SAMPLE (LCS) ANALYSIS

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

The LCSs contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the measurement procedures and accuracy of a particular analysis, samples are spiked with a known concentration of the analytes of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration (greater than 4 times), the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

The MS/MSD samples were spiked with all compounds of interest. Most percent recoveries and RPD values were within the laboratory control limits. Table 5 presents the sample results that were qualified due to outlying MS/MSD recoveries.

FIELD QA/QC SAMPLES

The field QA/QC consisted of one trip blank sample, one rinse blank sample, and two field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, one trip blank was submitted to the laboratory for VOC analysis. All results were non-detect for the compounds of interest.

Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the site, and cleanliness of sample containers, a rinse blank was submitted for analysis, as identified in Table 1. Target analytes were detected in the rinse blank sample. Table 6 presents the sample results that were qualified due to analyte concentrations in the rinse blank sample.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, two field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the reporting limit (RL), the evaluation criterion is one times the RL value for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the RL but greater than the MDL were qualified as estimated (J) in Table 3 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the RL in Table 3.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted herein.

RE: Analytical Results and Reduced Validation
2013 RFI Soil Sampling
RACER - Elyria Site
Elyria, Ohio
July 2013

INTRODUCTION

The following document details a reduced validation of analytical results for soil samples collected in support of the 2013 RFI Soil Sampling event at the RACER - Elyria Site during July 2013. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and the documents entitled:

i) "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

ii) "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items i) and ii) will subsequently be referred to as the "Guidelines" in this Memorandum.

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

All samples were properly preserved and delivered on ice and stored by the laboratory at the required temperature (0-6°C).

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Most method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation. Table 4 presents the sample results that were qualified due to analyte concentrations in the method blanks.

SURROGATE SPIKE RECOVERIES – ORGANIC ANALYSES

In accordance with the methods employed, all samples, blanks and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for volatile organic compounds (VOC) determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Some extremely low (<10% recovery) surrogate recoveries were reported. All associated detected results were qualified as estimated. Associated non-detect results were rejected based on the poor analytical efficiency. Table 5 presents the sample results that were qualified or rejected due to outlying surrogate recoveries.

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Organic Analyses

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses
The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration (greater than 4 times), the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

Inorganic Analyses
The MS/MSD samples were spiked with the analytes of interest and the results were evaluated using the "Guidelines". All percent recoveries and RPD values were within the control limits, demonstrating acceptable analytical accuracy and precision.

FIELD QA/QC SAMPLES

The field QA/QC consisted of four (4) field duplicate sample sets.

Field Duplicate Sample Analysis
To assess the analytical and sampling protocol precision, four (4) field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is two times the PQL value for soil samples.

Most field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision. Table 6 presents the sample results that were qualified due to variability in the field duplicate results.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

All soil results were reported on a dry weight basis.

MISCELLANEOUS

Most sample dry weights were greater than 50%. Table 7 presents the sample data that were qualified due to low percent solid content. All associated results were qualified as estimated as the amount of moisture present can introduce analytical variability.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted with the exception of the following:

- VOC non-detect data were rejected in sample S-12616-071113-DN-22 due to surrogate recovery failures (see Table 5).

RE: Analytical Results and Reduced Validation
2013 RFI Soil Sampling
RACER - Elyria Site
Elyria, Ohio
July 2013

INTRODUCTION

The following document details a reduced validation of analytical results for soil samples collected in support of the 2013 RFI Soil Sampling event at the RACER - Elyria Site during July 2013. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain-of-custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), and matrix spikes; and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical method referenced in Table 3 and the document entitled, "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

SAMPLE HOLDING TIME AND PRESERVATION

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain-of-custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved and delivered on ice and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

LABORATORY METHOD BLANK ANALYSES

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

Manganese was detected in one method blank. All the associated sample results were greater than five times the blank result and qualification of the data was not necessary. The remaining method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

LABORATORY CONTROL SAMPLE (LCS) ANALYSES

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of one per 20 investigative samples and/or one per analytical batch.

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

MATRIX SPIKE/MATRIX SPIKE DUPLICATE (MS/MSD) ANALYSES

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration (greater than four times), the recovery is not assessed.

MS/MSD analyses were performed as specified in Table 1.

The MS/MSD samples were spiked with the analytes of interest and the results were evaluated using the "Guidelines". Most percent recoveries and RPD values were within the control limits, demonstrating acceptable analytical accuracy and precision. Table 4 presents the sample data that were qualified due to outlying MS/MSD results.

ANALYTE REPORTING

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the practical quantitation limit (PQL) but greater than the

MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

All soil results were reported on a dry weight basis.

MISCELLANEOUS

Most sample dry weights were greater than 50 percent. Table 5 presents the sample data that were qualified due to low percent solid content. All associated results were qualified as estimated as the amount of moisture present can introduce analytical variability.

CONCLUSION

Based on this assessment of the information provided, the data produced by TestAmerica were found to exhibit acceptable levels of accuracy and precision and may be used with the qualifications noted herein.

MEMORANDUM

TO:	Andrew LaVine	REF. NO.:	012616-T02
FROM:	Angela Bown/bjw/15	DATE:	April 3, 2014

RE: Analytical Results and Reduced Validation
RFI-Well Installation Soil Sampling
RACER-Elyria
Elyria, Ohio
March 2014

1.0 Introduction

The following document details a reduced validation of analytical results for soil samples collected in support of the RFI-Well Installation Soil Sampling at the RACER-Elyria Site during March 2014. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the document entitled: "United States Environmental Protection Agency (USEPA) Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", USEPA 540-R-08-01, June 2008.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Some volatile organic compounds (VOCs) were detected in the method blanks. All associated sample results were either non-detect or were significantly greater than the blank value and were not impacted by the indicated contamination.

All remaining method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4.0 Surrogate Spike Recoveries - Organic Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for VOC determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries were within the laboratory control limits.

5.0 Laboratory Control Sample Analyses

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. Most LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Samples associated with outlying recoveries were qualified as follows (see Table 4):

i) Positive sample results associated with outlying LCS recoveries with high bias were qualified as estimated.

ii) Non-detect results associated with high LCS recoveries were not qualified. The indicated high bias would not impact the data.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

No site-specific samples were selected for MS/MSD analyses.

7.0 Field QA/QC Samples

The field QA/QC consisted of one field duplicate sample set.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, one field duplicate sample set was collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 100 percent for soil samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is two times the PQL value for soil samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

8.0 Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

All soil results were reported on a dry weight basis.

9.0 Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

MEMORANDUM

TO:	Andrew LaVine	REF. NO.:	012616-T02
FROM:	Angela Bown/bjw/16-NF	DATE:	April 16, 2014
RE:	**Analytical Results and Reduced Validation RFI-Groundwater Sampling RACER-Elyria Elyria, Ohio March 2014**		

1.0 Introduction

The following document details a reduced validation of analytical results for groundwater samples collected in support of the RFI-Groundwater Sampling at the RACER-Elyria Site during March 2014. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the document entitled: "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", United States Environmental Protection Agency (USEPA) 540-R-08-01, June 2008.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Acetone, carbon disulfide and methylene chloride were detected in the method blanks. All associated sample results that were at a similar concentration were qualified as non-detect. Table 4 presents the sample results that were qualified due to analyte concentrations in the method blanks.

All remaining method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4.0 Surrogate Spike Recoveries - Organic Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for VOC determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries were within the laboratory control limits.

5.0 Laboratory Control Sample Analyses

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCSs were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision. If the original sample concentration is significantly greater than the spike concentration, the recovery is not assessed.

The samples that were selected for MS/MSD analyses are noted in Table 1.

The MS/MSD samples were spiked with all compounds of interest. All percent recoveries and RPD values were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision.

7.0 Field QA/QC Samples

The field QA/QC consisted of two trip blank samples, one rinse blank sample, and three field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, two trip blanks were submitted to the laboratory for volatile organic compound (VOC) analysis. Most results were non-detect for the compounds of interest. Acetone and methylene chloride were detected in the trip blank samples. All associated sample results that were at a similar concentration were qualified as non-detect. Table 5 presents the sample results that were qualified due to analyte concentrations in the trip blanks.

Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the Site, and cleanliness of sample containers, a rinse blank was submitted for analysis, as identified in Table 1. Acetone, 2-butanone, and toluene were detected in the rinse blank sample. All associated sample results that were at a similar concentration were qualified as non-detect. Table 6 presents the sample results that were qualified due to analyte concentrations in the rinse blank.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, one field duplicate sample set was collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is one times the PQL value for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

8.0 Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

9.0 Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

MEMORANDUM

TO:	Andrew LaVine	REF. NO.:	012616-T02
FROM:	Angela Bown/bjw/18-NF	DATE:	September 30, 2014
RE:	**Analytical Results and Reduced Validation RFI-Groundwater Sampling RACER-Elyria Elyria, Ohio September 2014**		

1.0 Introduction

The following document details a reduced validation of analytical results for groundwater samples collected in support of the RFI-Groundwater Sampling at the RACER-Elyria Site during September 2014. Samples were submitted to TestAmerica Laboratories, Inc. (TestAmerica) located in North Canton, Ohio. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes (MS), and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and applicable guidance from the document entitled: "USEPA Contract Laboratory Program National Functional Guidelines for Superfund Organic Methods Data Review", United States Environmental Protection Agency (USEPA) 540-R-08-01, June 2008.

This document will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria and sample preservation requirements for the analyses are summarized in Table 3. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were analyzed within the required holding times.

EQUAL EMPLOYMENT OPPORTUNITY EMPLOYER

REGISTERED COMPANY FOR ISO 9001 ENGINEERING DESIGN

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Methylene chloride was detected in one method blank. All associated sample results were non-detect and therefore qualification was not necessary.

All remaining method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4.0 Surrogate Spike Recoveries - Organic Analyses

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for VOC determinations were spiked with the appropriate number of surrogate compounds prior to sample analysis.

Surrogate recoveries were assessed against laboratory control limits. All surrogate recoveries were within the laboratory control limits.

5.0 Laboratory Control Sample Analyses

LCSs are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects. High LCS recoveries do not impact non-detect sample results.

For this study, LCSs were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits or did not warrant qualification of the associated sample results.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The RPD between the MS and MSD is used to assess analytical precision.

If the original sample concentration is significantly greater than the spike concentration, then the recovery is not assessed. If only the MS or MSD recovery was outside of control limits, no qualification of the data was performed based on the acceptable recovery of the companion spike and the acceptable RPD.

The samples that were selected for MS/MSD analyses are noted in Table 1.

The MS/MSD samples were spiked with all compounds of interest. Most percent recoveries and RPD values were within the laboratory control limits, demonstrating acceptable analytical accuracy and precision. Table 4 presents the sample results that were qualified due to outlying MS/MSD recoveries.

7.0 Field QA/QC Samples

The field QA/QC consisted of two trip blank samples, one rinse blank sample, and three field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, two trip blanks were submitted to the laboratory for volatile organic compound (VOC) analysis. Most results were non-detect for the compounds of interest. Acetone and methylene chloride were detected in the trip blank samples. All associated sample results that were at a similar concentration were qualified as non-detect. Table 5 presents the sample results that were qualified due to analyte concentrations in the trip blanks.

Rinse Blank Sample Analysis

To assess field decontamination procedures, ambient conditions at the Site, and cleanliness of sample containers, a rinse blank was submitted for analysis, as identified in Table 1. All results were non-detect for the compounds of interest.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, three field duplicate sample sets were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is one times the PQL value for water samples.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

8.0 Analyte Reporting

The laboratory reported detected results down to the laboratory's method detection limit (MDL) for each analyte. Positive analyte detections less than the PQL but greater than the MDL were qualified as estimated (J) in Table 2 unless qualified otherwise in this memorandum. Non-detect results were presented as non-detect at the PQL in Table 2.

9.0 Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

Cobalt (cont.'d)

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detected data is small such as < 0.1
For such situations, GROS method tends to yield inflated values of UCLs and BTVs
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	3.9	Mean	8.88
Maximum	44	Median	7.85
SD	7.1	CV	0.8
k hat (MLE)	3.684	k star (bias corrected MLE)	3.338

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detected data is small such as < 0.1
For such situations, GROS method tends to yield inflated values of UCLs and BTVs
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Minimum	9	Mean	18.61

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detected data is small such as < 0.1
For such situations, GROS method tends to yield inflated values of UCLs and BTVs
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

Detected Data appear Approximate Lognormal at 5% Significance Level

Lognormal ROS Statistics Using Imputed Non-Detects

Mean in Original Scale	12.65	Mean in Log Scale	2.412
SD in Original Scale	7.409	SD in Log Scale	0.478
95% t UCL (assumes normality of ROS data)	14.8	95% Percentile Bootstrap UCL	14.81
95% BCA Bootstrap UCL	15.21	95% Bootstrap t UCL	15.78
95% H-UCL (Log ROS)	14.68		

UCLs using Lognormal Distribution and KM Estimates when Detected data are Lognormally Distributed

KM Mean (logged)	2.412	95% H-UCL (KM -Log)	14.68
KM SD (logged)	0.478	95% Critical H Value (KM-Log)	1.922
KM Standard Error of Mean (logged)	0.0845		

DL/2 Statistics

DL/2 Normal		**DL/2 Log-Transformed**	
Mean in Original Scale	29.96	Mean in Log Scale	2.53
SD in Original Scale	101	SD in Log Scale	0.834
95% t UCL (Assumes normality)	59.28	95% H-Stat UCL	24.66

DL/2 is not a recommended method, provided for comparisons and historical reasons

Nonparametric Distribution Free UCL Statistics

Detected Data appear Approximate Lognormal Distributed at 5% Significance Level

Suggested UCL to Use

95% KM (Chebyshev) UCL	18.4

Note: Suggestions regarding the selection of a 95% UCL are provided to help the user to select the most appropriate 95% UCL.
Recommendations are based upon data size, data distribution, and skewness.
These recommendations are based upon the results of the simulation studies summarized in Singh, Maichle, and Lee (2006).
However, simulations results will not cover all Real World data sets; for additional insight the user may want to consult a statistician.

Gamma ROS Statistics using Imputed Non-Detects

GROS may not be used when data set has > 50% NDs with many tied observations at multiple DLs
GROS may not be used when kstar of detected data is small such as < 0.1
For such situations, GROS method tends to yield inflated values of UCLs and BTVs
For gamma distributed detected data, BTVs and UCLs may be computed using gamma distribution on KM estimates

October 13, 2011

Christine Potts
Conestoga-Rovers & Associates, Inc.
410 Eagleview Blvd., Suite 110
Exton, PA 19341

Dear Ms. Potts:

I have reviewed the Biodiversity Database for the REALM RCRA RFI project area, including a one mile radius, at their Lowell St. closed landfill site in Elyria, Lorain County, Ohio, and on the Oberlin Quad (012616). The letters on the list below correspond to the areas marked on the accompanying map.

Lorain/Oberlin Quads
A. Rowland Nature Preserve – Elyria Township
B. North Coast Inland Trail – Lorain Co. Metro Parks

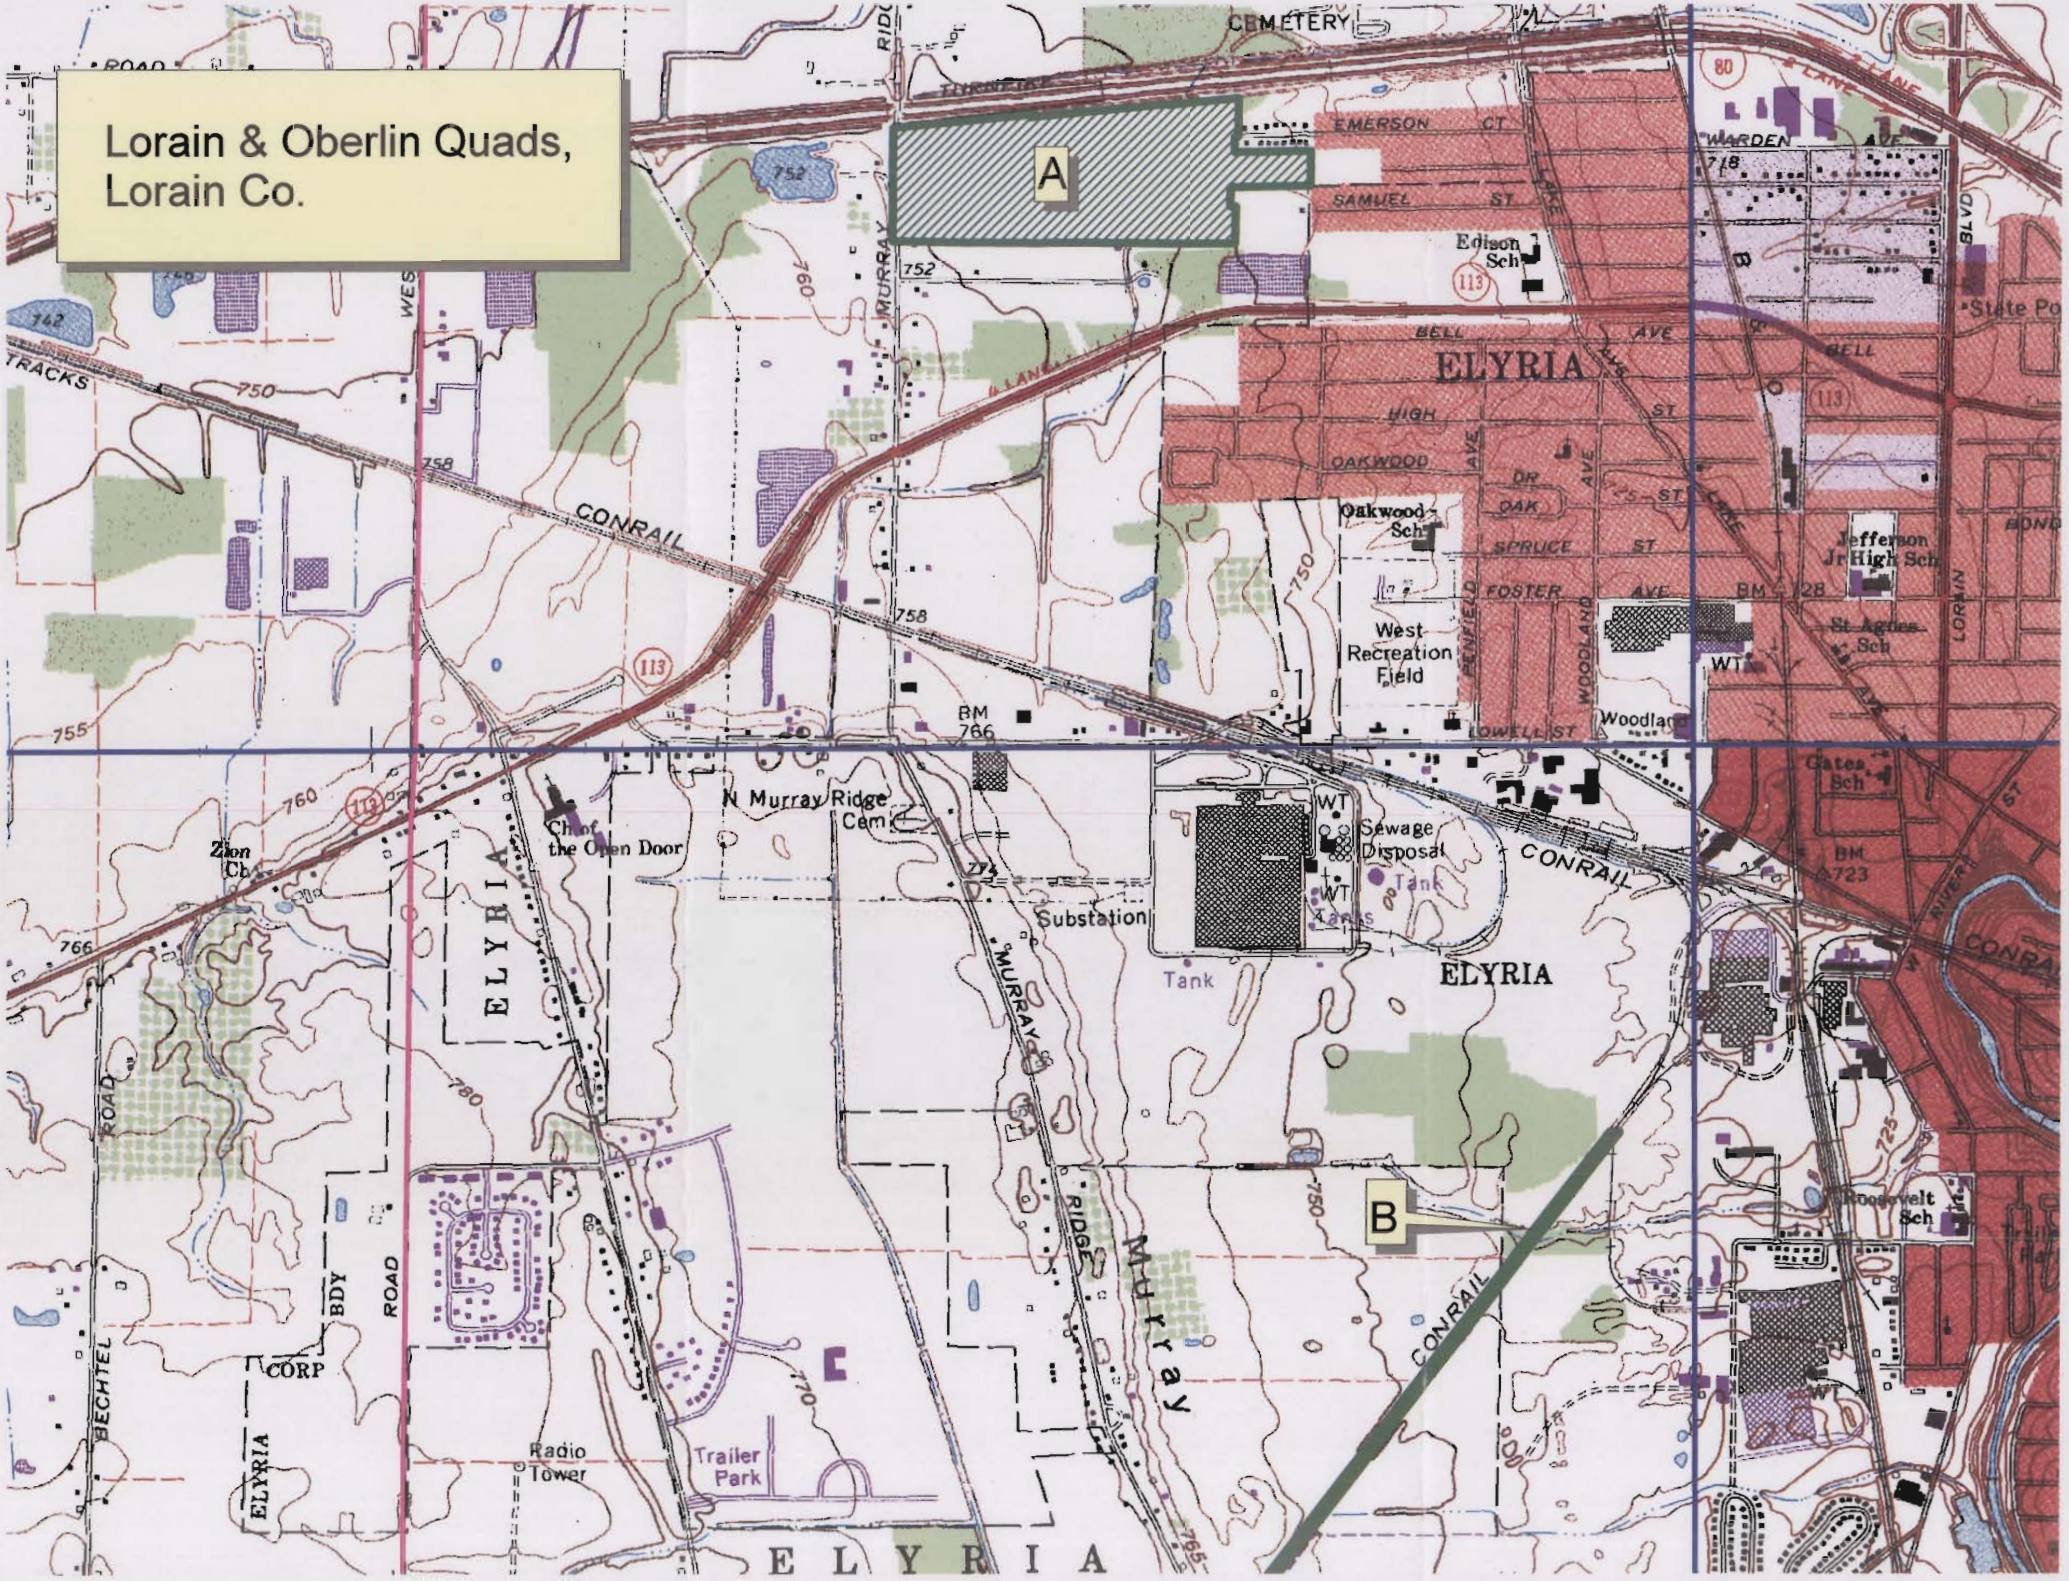
We are unaware of any unique ecological sites, geologic features, animal assemblages, scenic rivers, state wildlife areas, nature preserves, parks or forests or national wildlife refuges, parks or forests within a one mile radius of the project area.

Our inventory program has not completely surveyed Ohio and relies on information supplied by many individuals and organizations. Therefore, a lack of records for any particular area is not a statement that rare species or unique features are absent from that area. Please note that although we inventory all types of plant communities, we only maintain records on the highest quality areas.

Please contact me at 614-265-6818 if I can be of further assistance.

Sincerely,

Debbie Woischke, Ecological Analyst
Ohio Biodiversity Database Program



Lorain & Oberlin Quads,

Re: Technical Assistance
REALM Property – Closed Landfill Site
Elyria, Lorain County, Ohio

Dear Ms. Potts:

This is in response to the August 19, 2011 letter requesting information on Threatened and Endangered species in the project area. The proposed project is located near the Northern Ohio Industrial Park in Elyria, Lorain County, Ohio. CRA proposes to perform a Level 1 Scoping Ecological Rick Assessment at the site.

There are no Federal wilderness areas, wildlife refuges, or designated Critical Habitat within the vicinity of the proposed site.

ENDANGERED SPECIES COMMENTS: The proposed project lies within the range of the **Indiana bat** (*Myotis sodalis*), a federally listed endangered species. Since first listed as endangered in 1967, their population has declined by nearly 60%. Several factors have contributed to the decline of the Indiana bat, including the loss and degradation of suitable hibernacula, human disturbance during hibernation, pesticides, and the loss and degradation of forested habitat, particularly stands of large, mature trees. Fragmentation of forest habitat may also contribute to declines. During winter, Indiana bats hibernate in caves and abandoned mines. Summer habitat requirements for the species are not well defined but the following are considered important:

(1) dead or live trees and snags with peeling or exfoliating bark, split tree trunk and/or branches, or cavities, which may be used as maternity roost areas;
(2) live trees (such as shagbark hickory and oaks) which have exfoliating bark;
(3) stream corridors, riparian areas, and upland woodlots which provide forage sites.

Should the proposed site contain trees or associated habitats exhibiting any of the characteristics listed above, we recommend that the habitat and surrounding trees be saved wherever possible. If the trees must be cut, further coordination with this office is requested to determine if surveys

are warranted. Any survey should be designed and conducted in coordination with the Endangered Species Coordinator for this office. Surveyors must have a valid Federal permit.

The project lies within the range of the **piping plover** (*Charadrius melodus*), a federally listed endangered species. Due to the project type, location, and onsite habitat, this species would not be expected within the project area, and no impacts to this species are expected. Relative to this species, this precludes the need for further action on this project as required by the 1973 Endangered Species Act.

The proposed project lies within the range of the **Kirtland's warbler** (*Setophaga kirtlandii*), a federally listed endangered species. The Kirtland's warbler is a small blue-gray songbird with a bright yellow breast. This species migrates through Ohio in the spring and fall, traveling between its breeding grounds in Michigan, Wisconsin, and Ontario and its wintering grounds in the Bahamas. During migration, individual birds usually forage in low vegetation and stay in one area for a few days. Precautions should be taken to avoid impacting this species in the spring from late April through May and from late August to early October.

The project lies within the range of the **bald eagle** (*Haliaeetus leucocephalus*), a species protected under the Bald and Golden Eagle Protection Act and the Migratory Bird Treaty Act. Due to the project type, location, and onsite habitat, this species would not be expected within the project area, and no impact to this species is expected. Relative to this species, this precludes the need for further action on this project as required by the Migratory Bird Treaty Act and the Bald and Golden Eagle Protection Act.

Should additional information on listed or proposed species or their critical habitat become available or if new information reveals effects of the action that were not previously considered, our comments and recommendations may be reconsidered. These comments have been prepared under the authority of the Fish and Wildlife Coordination Act (48 Stat. 401, as amended; 16 U.S.C. 661 et seq.), the Endangered Species Act of 1973 (ESA), as amended, and are consistent with the intent of the National Environmental Policy Act of 1969 and the U. S. Fish and Wildlife Service's Mitigation Policy.

If you have questions, or if we may be of further assistance in this matter, please contact Sarah Bowman at extension 18 in this office, or through email at sarah_bowman@fws.gov.

Sincerely,

Mary Knapp

MEMORANDUM

30 December 2015
File No. 41753-001

TO: RACER Trust
Pam Barnett

FROM: Haley & Aldrich, Inc.
Lloyd S. Ross and David J. Hagen

SUBJECT: Groundwater Evaluation, RCRA Facility Investigation, Delphi Interior Elyria (11110), Elyria, Ohio

DRAFT

Groundwater was investigated as an area of interest during RCRA Facility Investigation conducted at the Delphi Interior Elyria Site (facility). Haley & Aldrich has conducted additional data collection and reviewed the other RFI data summarized herein. This memorandum summarizes this work and the results of our evaluation of the site groundwater for the RFI.

Geology and Hydrogeology

The site geology is described in the RFI Report as having three main stratigraphic units from the surface downwards:

1. drift (clay till);
2. Berea Sandstone; and
3. Bedford Shale.

The RFI identified two water bearing units consisting of:

1. The Till unit and the contact with the Berea Sandstone (referred to as Till Contact unit)
2. The upper portion of the Berea Sandstone aquifer (referred to as the Bedrock unit)

Additional information on the geology is provided in the RFI Report.

Groundwater Flow Direction

Groundwater flow in the Till Contact unit and the Bedrock unit is observed as having similar hydraulic conductivities, elevations and groundwater flow patterns when evaluated on a Site wide basis. These two units are in contact with each other with no apparent aquitard separating the two stratigraphic

units. As such, the previously identified two hydrostratigraphic units groundwater have been interpreted (as discussed herein) as a single hydrostratigraphic unit.

Haley & Aldrich reviewed groundwater contour plans previously prepared by others and found groundwater depressions that could only be explained by groundwater discharge/withdrawl (to a pumping well or a sewer system for example). An interpretation of the conditions that would cause these groundwater depressions was not provided by the authors of the plans. Haley & Aldrich reviewed drawings of the site storm sewers and found that the groundwater depressions were coincident with the locations of the site storm sewer system indicating the possibility that leaking storm sewers may be the cause of the observed groundwater depressions. Based on this observation, Haley & Aldrich conducted a site visit and collected storm sewer depths at points along the storm sewer alignment that crosses the RACER Elyria site to determine if the storm sewers were acting as discharge points for site groundwater.

The based on field measurements, the invert elevations were lower than groundwater elevations from wells installed proximal to the sewers. In addition, we visually observed water flowing in the storm sewers during prolonged periods of dry weather indicating groundwater is entering the pipe during periods when storm water runoff was absent (ie. groundwater discharge).

Additional and updated invert elevations of the storm sewers were surveyed to the site benchmarks (Table 1) to allow sewer elevations to be incorporated into groundwater flow interpretations (contour plans) and a round of water levels was collected on April 27, 2015. A comparison of these water elevations to historic measurements is provided in Table 2. Based on this review, the storm sewer system at the facility is acting as a groundwater discharge point much like that of a gaining stream. The groundwater elevation data from April 2015 and the sewer invert elevations were used to develop groundwater contours Figure 1.

Based on these contours, the consideration of the storm sewers does not alter the interpretations of the groundwater flow direction beneath the RCRA landfill primarily because there are no sewers located beneath the landfill. Groundwater flow direction beneath the RCRA landfill remains toward the Northwest. The storm sewer system that bisects the northern portion of the property receives groundwater much like a gaining stream and has a “watershed area.” Because of the low permeability soils (Till Contact and Bedrock Unit), the groundwater gradients are greatest (steepest) immediately adjacent to the storm sewer alignment.

The influence of the storm sewers should be considered and factored into the previous groundwater contours developed and presented for the northern portion of the site. Based on review of the elevations (Table 2) the groundwater flow direction appears consistent.

Groundwater Contamination

During the RFI activities, the chlorinated solvents trichloroethylene (TCE), 1,2-dichloroethene (cis and trans) (DCE) and vinyl chloride have been detected in groundwater samples collected from the adjacent property and the RACER property at concentrations greater than the Maximum Contaminant Levels (MCLs) (Table 3). Details of the sampling are provided in the RFI Report.

DRAFT

Based on the exceedance of MCL for the chlorinated compounds, groundwater is considered to be contaminated. We note that use of groundwater at the site for drinking water is unlikely and is to be restricted under the site-wide institutional controls to be proposed under corrective action.

A summary of the groundwater sample concentrations of TCE, DCE and vinyl chloride are shown for on Figures 2, 3 and 4, respectively. Each figure shows the maximum sample concentration from the 2012, 2013 and 2014 groundwater sampling events. Although the Till Contact and Bedrock Unit are considered to be a single hydrogeological unit, contaminant stratification within this unit is possible and may be significant with respect to evaluation of future vapor intrusion exposures.

The maximum concentration of vinyl chloride was detected in a sample collected from MW-22S from the adjacent property. Based on the groundwater flow directions in Figure 1, the predominant groundwater flow from the adjacent property is east toward the RACER property and storm sewers. Based on groundwater flow direction and groundwater sample concentration gradients, the low-level detections of vinyl chloride at MW-16R and MW-18 may be migration from groundwater migration on to the RACER property. The chlorinated solvents detected on-site at P-05R, P5SR, P-1 and MW-19 may be related to former activities at the Southern Former Die Storage Pad.

Based on the groundwater flow direction and groundwater sample concentrations, chlorinated solvents are not migrating off of the RACER property at concentrations greater than the MCLs. However, chlorinated compounds in groundwater are likely discharging to the storm sewers.

Storm Water Contamination

As described above, there are contaminants greater than the MCL present in the adjacent and on-site groundwater that may discharge to the site storm sewer. Based on site visit, the former NPDES 001 Outfall is contained within a manhole and water within the sewer does not daylight on-Site. According to the draft RFI Report, the closest major water body is the West Branch of the Black Creek which is more than 0.8 mile to the east of the Site.

The surface water quality criteria can be considered in evaluating the eventual discharge of groundwater to and eventually from the storm sewer to surface water. For this screening, the maximum chlorinated solvent concentrations in groundwater were compared to the following surface water criteria:

a. OMZA Non-drinking Human Health Criteria Table 33-2. Lake Erie drainage basin water quality criteria for the protection of human health and wildlife. OAC 3745-1-33;

b. OMZA Aquatic Life Criteria from Lake Erie Basin Aquatic Life and Human Health Tier I Criteria, Tier II Values and Screening Values. Ohio EPA, Division of Surface Water 10/20/2009; and

c. Non-drinking Human Health Criteria from Lake Erie Basin Aquatic Life and Human Health Tier I Criteria, Tier II Values and Screening Values. Ohio EPA, Division of Surface Water 10/20/2009.

DRAFT

With the exception of trichloroethylene at P-05R, the on-site groundwater sample concentrations of trichloroethene, dichloroethene and vinyl chloride are less than the surface water criteria. The maximum on-site groundwater sample concentration of trichloroethene is greater than the surface water criteria as summarized below. The maximum concentrations of trichloroethene and vinyl chloride in groundwater samples from off-site are greater than the surface water criteria.

Compound	Aquatic Life OMZA (µg/l)		Human Health Nondrinking (µg/l)		Maximum RFI Concentration on-site (µg/l)	Maximum RFI Concentration adjacent-site (µg/l)
1,2-Dichloroethene	970	Tier II (total)	25000	Tier I	670 at P-05R	907 at MW-22S
Trichloroethene	220	Tier II	370	Table 33-2	**580** at P-05R	**490** at MW-22S
Vinyl chloride	930	Tier II	28	Tier I c	140 at P-05R	**1,200** at MW-22S

Based on the above, trichloroethene in groundwater from P-05R and trichloroethene and vinyl chloride in groundwater on the adjacent site have the potential to discharge to the storm sewer at concentrations greater than surface water quality criteria. However, groundwater flow direction from P-05R is east toward P-1 and MW-19. The groundwater sample concentrations from P-1 and MW-19 are less than the surface water quality criteria. The storm sewer outfall is located over 700 feet east of P-05R.

To evaluate the potential for discharge of volatile organic compounds in the site sewer network off-site, samples from the former NPDES Outfall 001 were collected on 31 August 2015. Outfall 001 location is an enclosed confluence of the site sewer system prior to leaving the site (see attached figures). Daylighting of the sewer flow was not observed on site. Pictures of the manhole access and former sampling piping are shown below.

There was no rainfall at the site for 48-hours prior to sampling and the site ditches and ground surface was dry. Samples were collected from the former Outfall 001 using a disposable bailer. Samples were

DRAFT

submitted to TestAmerica for analysis of volatile organic compounds. The analytical results from the sewer sampling are summarized below and the laboratory reports are attached.

Compound	Aquatic Life OMZA (µg/l)		Human Health Nondrinking (µg/l)		Storm Outfall Sample Concentration 31 Aug 2015 (µg/l)
1,2-Dichloroethene	970	Tier II (total)	25000	Tier I	112
Trichloroethene	220	Tier II	370	Table 33-2	12
Vinyl chloride	930	Tier II	28	Tier I c	6.5

Concentrations of 1,2-dichloroethene, trichloroethene and vinyl chloride were detected in the sewer sample at concentrations less than the OMZA surface water quality criteria. These results provide additional evidence that groundwater discharges to the storm sewer. In addition, based on the sample concentrations from the former Outfall 001 the concentrations at the property boundary are less than surface water quality criteria and therefore would not exceed surface water quality criteria at the point of daylighting to surface water.

Conclusions

Two areas of groundwater contamination are evident: 1) off-site and extending on-Site in the vicinity of the former WWTP and 2) adjacent to the Southern Former Die Storage Area (AOI-7). Based on the groundwater sample concentrations of trichloroethene, 1,2-dichloroethene and vinyl chloride greater than the MCL; therefore restriction on the use of groundwater for potable purposes is a likely remedy for the site. In addition, because volatile organic compounds have been detected in groundwater in the Till Contact unit, the construction of future structures should evaluate the potential for vapor intrusion to indoor air.

Based on groundwater flow direction, migration of contamination in groundwater is the limited by the influence of the storm sewer network. Based on the groundwater contours and storm sewer samples, the VOC contaminants in groundwater are collected by the existing storm sewer. The VOCs detected in the storm sewer at the property boundary are less than the surface water OMZA criteria and therefore do not pose a risk to surface water.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
U	Indicates the analyte was analyzed for but not detected.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Narrative

CASE NARRATIVE

Client: Haley & Aldrich, Inc.

Project: Racer Elyria

Report Number: 240-53848-1

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

TestAmerica Canton attests to the validity of the laboratory data generated by TestAmerica facilities reported herein. All analyses performed by TestAmerica facilities were done using established laboratory SOPs that incorporate QA/QC procedures described in the application methods. TestAmerica's operations groups have reviewed the data for compliance with the laboratory QA/QC plan, and data have been found to be compliant with laboratory protocols unless otherwise noted below.

The test results in this report meet all NELAP requirements for parameters for which accreditation is required or available. Any exceptions to NELAP requirements are noted in this report. Pursuant to NELAP, this report may not be reproduced, except in full, without the written approval of the laboratory.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

All solid sample results are reported on an "as received" basis unless otherwise indicated by the presence of a % solids value in the method header.

This laboratory report is confidential and is intended for the sole use of TestAmerica and its client.

RECEIPT

The samples were received on 8/1/2015 11:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.6° C.

VOLATILE ORGANIC COMPOUNDS (GCMS)

Samples 0171-073115-1600 (240-53848-1) and 0171-073115-0001 (240-53848-2) were analyzed for volatile organic compounds (GCMS) in accordance with EPA SW-846 Method 8260B. The samples were analyzed on 08/04/2015.

Sample 0171-073115-1600 (240-53848-1)[5.71X] required dilution prior to analysis. The reporting limits have been adjusted accordingly.

No analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.
