Mr. D. O. Cummins, Geologist
Lansing Compliance District
Groundwater Quality Division

Dear Mr. Cummins,

This letter is in response to your letter of May 7, 1985 acknowledging receipt of the analysis of the fourth quarter samples from the Linden Rd. landfill site. It is our proposal to sample and analyze 4 wells on an annual basis. These wells are identified as 2d, 5d, 7d and 8d (see attached site map). The analysis that will be performed will be as follows: pH, TDS, Oil, Phenol, NO₃, Cl, Cn, F, SO₄, As, Ba, Cd, Cr, Cu, Fe, Pb, Hg, Ni, Se, Ag, Zn, Na, K, Mg, Ca, HCO₃, CO₃, Conductance, PCB's and the priority pollutants.

Prior to sampling, the wells will be pumped dry and then sampled in approximately 3 to 4 weeks due to the slow recovery rate. The sampling will be conducted in late spring or early summer as conditions allow.

Should you have any questions or comments regarding this proposed sampling and analysis schedule, please contact this office at (313) 575-5663.

Sincerely,

C-P-C Group
GMC
