Subject: RE: RACER - Hemphill Rd Ind. Land - Soil, Stockpile & VI Sampling Evaluation

Cliff,

The sampling plan is approved with the following clarifications discussed on our 9/7 conference call.

- Care will be taken when penetrating the asphalt for Incremental Sampling, to limit dragging down asphalt into the subgrade. Also, a systematic approach will be developed for removing asphalt from the actual sample interval and removal of the subgrade material as necessary to avoid having gravel that limits recovery in the sample equipment.
- All sample locations on site will be preselected with associated coordinate's established prior to going into the field. A handheld GPS unit will be used in the field to locate the pre-selected sample locations. The coordinate system used to identify points on the desktop, and the coordinate system used on the handheld device in the field, will be consistent.
- The depth of the six soil samples used to characterize the soil pile will be selected based on the thickness of the soil pile at the sample location and will be collected from the center of the pile at that location.

Also, please coordinate the sampling schedule with me so I have a chance to be in the field during the initiation of the IS sampling activities.

Paul

Subject: RACER - Hemphill Rd Ind. Land - Soil, Stockpile & VI Sampling Evaluation

Paul,
The Soil, Stockpile, and VI Sampling Evaluation work plan is attached for your approval.
Do you want this submitted in hard copy? If so, how many copies?

Our next conference call is scheduled for September 7, 2018, but feel free to contact Dave or me prior to our call if you have any questions or concerns.

Thank you and have a wonderful afternoon and week,
CSY
