Pontiac, Michigan 48341-3147

Dear Ms. Tucker-Billingslea:

SUBJECT: No Further Interest (NFI) Request; General Motors Corporation (GM);
13000 Eckles Road Site; Livonia, Michigan; MID 005 356 621

This letter is in response to an April 18, 2007 e-mail on behalf of GM to the Michigan Department of Environmental Quality (MDEQ), Waste and Hazardous Materials Division (WHMD), requesting an NFI determination for the former GM Delphi Chassis Systems property located at 13000 Eckles Road (Property) in Livonia, Michigan (see enclosed map). The MDEQ understands that GM has conducted corrective measures at the Property under the U.S. Environmental Protection Agency (U.S. EPA), Region 5, oversight and that the U.S. EPA, pursuant to its authority under the federal Resource Conservation and Recovery Act, as amended (RCRA), issued an NFI letter to GM on March 19, 2007, for the Property contingent upon the following conditions being met pursuant to an Administrative Order on Consent issued to GM under Section 3008(h) of the Solid Waste Disposal Act:

1. Continued operation and monitoring of the French drain collection system, treatment system and barrier wall to control the off-site migration of chromium and nickel-impacted groundwater and the discharge of treated groundwater in compliance with applicable standards (see enclosed map);
2. Implementation of a groundwater monitoring program at Area 1, AOI 31 and AOI 21 to confirm that concentrations in these areas remain stable and meet risk based criteria under current and reasonably expected groundwater exposures (see enclosed map);
3. Maintenance of and compliance with the restrictive covenant to restrict use of the Property to non-residential purposes and prohibit groundwater use at the Property unless and until groundwater meets applicable performance standards; and

4. Implementation of and compliance with the Dust Control Plan to control particulate emissions from surface soils along the northern boundary of the Property, referred to as AOI 39 (see enclosed map).

Based on the information provided by the U.S. EPA and GM, the MDEQ neither plans nor anticipates pursuing any further corrective action at the Property unless (1) new information, a change of site conditions, or subsequent activities indicate additional hazardous constituents exist at the Property that pose a threat to public health, safety, welfare, or the environment; (2) the MDEQ is notified of a change in the limited land-use category of any portion of the Property such that the limited industrial and commercial II, III, and IV cleanup criteria, upon which the corrective action was based, would no longer apply; or (3) the conditions of approval specified in the U.S. EPA's March 19, 2007, NFI determination are not complied with.

Pursuant to R 299.9522(2) of the administrative rules promulgated pursuant to Part 111, Hazardous Waste Management, of the Michigan Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (Act 451), a new owner or operator of a facility is required to submit a revised Part A permit application not later than 90 days before the scheduled ownership change. The MDEQ has determined that a revised Part A permit application must be submitted by the new owner of the Property because the Property has corrective action controls in place that require long-term operation and maintenance obligations.

Please be aware that, according to R 299.9522(4), the responsibility for remedial measures to correct any environmental problems resulting from previous operations at the Property shall be assumed by the new and any subsequent owner(s) or operator(s). Also, the new owner(s) or operator(s) needs to be aware that performing a baseline environmental assessment under Part 201, Environmental Remediation, of Act 451, and its administrative rules does not afford the new owner(s) or operator(s) any liability protections from performing those remedial measures under Part 111 or RCRA, if determined necessary in the future.

Please note that this NFI determination does not preclude the MDEQ from requiring further corrective action at a later date, if determined necessary. The MDEQ understands that corrective action has been conducted at the Property and that the final remedy decision requires a restrictive covenant on the property to restrict the uses of the Property for any purpose other than those characterized by the MDEQ as limited industrial and commercial II, III, and IV, unless otherwise agreed to by GM and the U.S. EPA in consultation with the MDEQ. If future activities and uses of the Property are desired that are not consistent with the limited industrial and commercial II, III, and IV cleanup criteria and the exposure characteristics of those land-use categories/subcategories, or are inconsistent with the restrictive covenant, then additional corrective action may be required of the current or subsequent owner(s) of the Property to meet the cleanup criteria for the desired activities and uses. Further information on the types of activities and uses that fall under limited industrial and commercial II, III, and IV land-use categories refer to the MDEQ, Remediation and
