Introduction and Overview of Pontiac North Campus Property

On October 10, 2000, the U.S. Environmental Protection Agency (USEPA) and the former General Motors Corporation (GMC) entered into a Voluntary Corrective Action Agreement (Voluntary Agreement) for the Pontiac North Campus (PNC Site) located in Pontiac, Michigan. The Voluntary Agreement required GMC to work independently and voluntarily to investigate and, as necessary, stabilize and remediate releases of hazardous waste or hazardous constituents at or from the PNC Site in accordance with the Resource Conservation and Recovery Act (RCRA) and relevant USEPA corrective action guidance documentation. Many of the investigation activities were completed by GMC prior to the bankruptcy filing on June 1, 2009.

On June 1, 2009, GMC filed for Chapter 11 protection in federal court under the Bankruptcy Code. On July 10, 2009, what would subsequently become GM LLC (GM) was created and purchased certain GMC assets pursuant to Section 363 of the Bankruptcy Code. Motors Liquidation Company (MLC) was formed to manage the assets (89 properties) that were not sold to GM. The entire PNC Site was split into separate operational portions on July 10, 2009, with MLC controlling some portions and GM controlling the remainder. Effective March 31, 2011, the Revitalizing Auto Communities Environmental Response (RACER) Trust was created through a Bankruptcy Settlement Agreement. Ownership and responsibility for certain environmental conditions for select PNC parcels were transferred to RACER (Site, **Figure 1**).

An Administrative Order on Consent was executed on September 29, 2011, between USEPA and RACER calling for RACER to complete corrective action at the Site.

Cleanup activities are currently being performed by RACER Trust under the federal RCRA Corrective Action program, with the approval and oversight of USEPA. The Settlement Agreement that created RACER established funding for corrective action work at the Site.

Fiero Powerhouse Environmental Summary

Current Ownership and Operations

The Fiero Powerhouse property is a portion of the larger Site and is located at 824 Saint Clair Street in the City of Pontiac, Oakland County, Michigan (Property, **Figure 1**). The Property consists of approximately 18.19 acres with Parcel ID 14-20-201-004. The Property is currently owned by RACER.

Most of the Fiero Powerhouse property is currently leased by Green for Life (GFL) from RACER. A small area of land in the southeast portion of the Fiero Powerhouse property is currently owned and operated by Jimenez Investments, LLC and consists of 0.57 acre with Parcel ID 14-20-201-005 (**Figure 1**); this parcel was sold by RACER to Jimenez Investments on June 25, 2015.

Historical Operations

The majority of the Property previously housed a gas and coal-fired electrical and steam generating plant which was owned and operated by GMC for the purpose of providing power and steam to its entire PNC Site from the mid-late 1920s when the PNC Site was first developed. Operations at the Fiero Powerhouse were leased to DTE Energy by GMC in 2007 and carried over under RACER's ownership until 2017. Activities were phased out by DTE between 2009 and 2012. RACER Trust decommissioned and demolished the entire Fiero Powerhouse facility in 2019 and 2020. Refer to **Attachment 1** for historical aerial photographs depicting the powerhouse property from the late 1930s to 2016.

The southeastern portion of the Powerhouse property (referred to as the Panhandle) formerly housed a closed container storage area (CSA). This area managed both liquid and solid waste and was identified as solid waste management unit (SWMU) 4 in historical reports (referenced as Area of Interest [AOI] F-4 in the table below and on **Figure 2**). Based on historical records the closed CSA was in operation from before 1977 to August 1985 (PRC 1992). Clean closure certification of the CSA was received from the Michigan Department of Natural Resources (MDNR – currently the Michigan Department of Environment, Great Lakes, and Energy (EGLE)) in February 1988. Refer to **Attachment 2** for the clean closure certification letter. The closed CSA was situated on an enclosed, bermed concrete pad with a maximum capacity of 375 55-gallon drums. Waste stored in the closed CSA included scraped sealers, adhesives, paint thinners, and waste solvents (PRC 1992). The closed CSA ceased being used on August 15, 1985. A total of 37 containers were removed from the closed CSA (AOI F-4), visible residue was removed from the concrete pad and the pad was washed with detergent and water. Wastewater was collected and transferred to the wastewater treatment plant (formerly located in the southeastern portion of the powerhouse property). The closed CSA berm and concrete pad was dismantled, removed, and paved.

A former wastewater treatment plant (WWTP) was also historically located in the eastern portion of the Powerhouse Property (AOI F-5 **Figure 2**). The WWTP consisted of above-grade steel tanks situated on a concrete pad with secondary containment and operated from 1973 through 1983. Based on historical aerial photographs of the area (**Attachment 1**), the WWTP was removed prior to 1987. As outlined in historical reports, no documented releases were associated with the WWTP.

The 2001 ENCORE Current Conditions Report (CCR) and the CCR Addendum (ENCORE 2002) identified ten AOIs within the Powerhouse property as having potential environmental issues, which also included AOIs F-4 and F-5 discussed above. The AOIs and a summary of the relevant information pertaining to each one of them is provided in the table below and the location of the AOIs are shown on **Figure 2**.

Exhibit 1: Summary of Former Fiero Powerhouse Areas of Interest

Area ID	AOI Description	Materials Managed	RFI/Interim Measures Activities
F-1	Powerhouse Satellite Accumulation Areas: Located in the Powerhouse basement	Managed waste paint thinner	AOI F-1 consisted of two Satellite Accumulation Areas (SAA). SAA1 was identified as a solid waste management unit (SWMU) in the Fiero Preliminary Assessment/Visual Site Inspection (PA/VS) Report (PRC 1992). No known releases reported, and no visual evidence of a release observed. No further action was recommended in the CCR.
F-3	Container Storage Area: Located on the south side of the storage dock of Plant 17	Storage of chlorinated solvents, paint waste, waste sealers, and waste adhesives	Two soil and groundwater investigations were completed in 1990 and 1992. A closure report was submitted to MDNR in Jan. 1995. Final closure is being pursued through the RCRA Corrective Action process.
F-4	Closed Container Storage Area: Southwest driveway, adjacent to railroad tracks	Storage of scrap sealers, adhesives, paint thinners, and solvents	An ENCORE RFI Work Plan Addendum No. 13 (ENCORE 2004) indicated two soil borings were installed in the AOI F-4 area. The report stated that data from the soil borings did not contain volatile organic compounds (VOCs) or semi-volatile organic compounds (SVOCs) above the laboratory quantitation limit. Closure of the area was accepted by MDNR in February 1988 (Attachment 2).
F-5	Former Fiero Wastewater Treatment Plant (WWTP): Located 100 yards north of Owens Street	Managed wastewater, wastewater treatment sludge, paint sludge, and Bonderite sludge	The former Fiero WWTP operated from 1977 to 1983. Consisted of above grade tanks situated on a concrete pad with secondary containment. No known releases reported. No further action was recommended in the CCR.

Area ID	AOI Description	Materials Managed	RFI/Interim Measures Activities
F-7	Wastewater Collection Sumps: Located in the basement of the Powerhouse	Industrial wastewater	The sumps were cleaned and inspected. No known releases occurred at the wastewater collection sumps and were noted to be in good condition during the Fiero PA/VSI. In addition, two groundwater monitoring wells were installed.
F-10	High-Pressure Fly Ash Storage Silo: Silo east of the Powerhouse	Non-hazardous fly ash	No further action was recommended in the CCR. Structures were demolished between 2019 and 2020.
F-11	Low-Pressure Fly Ash Storage Silos: Silos east of the Powerhouse	Non-hazardous coal fly ash	No further action was recommended in the CCR. Structures were demolished between 2019 and 2020.
F-12	Coal Storage Area Located southeast of the Powerhouse	Coal (Reported waste solvent added to coal to increase BTU)	Two groundwater monitoring wells were installed in relation to this area.
F-14	Fuel AST Area - Located west of the low- pressure fly ash storage silos - The area included three ASTs	Diesel fuel and gasoline	Two soil borings were completed in relation to this area.
F-15	Oil/Solvent Catch Basin - Located in the Fiero Loading dock - Potential source of cVOC impacts	Unknown oil sludge and solvents	The catch basin was cleaned and inspected. In addition, two soil borings were completed and one groundwater monitoring well was installed.

Summary of Property Characterization

As summarized above, of these ten AOIs identified, four were further investigated for potential release of hazardous waste or hazardous constituents. For each of these four areas, soil and groundwater samples were collected and analyzed for hazardous constituents. In addition, potential releases of light non-aqueous phase liquid (LNAPL) were also investigated at each area that was further investigated. LNAPL was not detected at the Property during any of the subsurface investigations. Refer to **Table 1** and **Table 2** for soil and groundwater data compared to EGLE December 2020 Residential and Non-Residential Criteria. Refer to **Figure 2** for soil and groundwater investigation locations.

Shallow groundwater across the Site generally flows towards the southwest. Offsite wells downgradient of the Property are located along Saint Clair Street and East Montcalm Street and act as indicators if any significant release occurred from upgradient AOIs as well as other portions of the former Fiero property. These offsite wells have been historically and more recently sampled for VOCs and do not contain concentrations which exceed applicable criteria.

Based on a recent review of data compared to site-specific vapor intrusion (VI) criteria issued by EGLE in 2020, exceedances of chlorinated volatile organic compounds (cVOCs) have been identified at the property boundary. Additional investigation and monitoring activities to investigate and delineate potential cVOC source areas and further evaluate the potential off-site vapor intrusion pathway were initiated in 2020 and are currently ongoing.

Currently anticipated corrective measures associated with the Property include, but are not limited to the following:

- Deed restrictions, including but not limited to the below;
 - o limit the use of the property to commercial or industrial uses (non-residential)
 - o limit the ability to excavate or construct any sub-grade structures without properly managing/disposing of excavated material and implementing appropriate health and safety procedures as required by USEPA and EGLE soil management requirements and OSHA
 - o prohibit extraction or use of groundwater
 - o prohibition of installation of subsurface features unless approved in advance in writing by USEPA or EGLE as applicable and RACER Trust
 - o prohibition of construction and/or occupancy of any new buildings, structures, basements and/or additions to existing structures on the property, unless such construction and/or occupancy incorporates engineering controls designed to eliminate the potential for subsurface vapor phase contaminants or hazardous substances to migrate into the new structure at concentrations greater than the appropriate concentrations protective of public health; or unless prior to the construction and/or occupancy of any structure, an evaluation of the potential for any contaminants or hazardous substances to volatilize into indoor air assures the protection of persons who may be present in the buildings. Plans and/or evaluations must be approved in advance in writing by USEPA or EGLE as applicable.
- Off-site groundwater ordinance which prohibits the installation of wells for groundwater use within the ordinance area, which includes the Property and downgradient areas.

Table 1
Soil Sample Analytical Summary Table - Notes
RACER Trust Pontiac North Campus
Former Fiero Powerhouse

Notes:

- 1) Criteria listed are from the Michigan Department of Environment, Great Lakes, and Energy (EGLE) Clean Up Criteria Requirements Table 1: Soil: Residential and Nonresidential, Part 201 Generic Cleanup Criteria and Screening Levels, December 21, 2020.
- 2) Department of Environment, Great Lakes and Energy (EGLE) developed Site-Specific Volatilization to Indoor Air Criteria for the Former Fiero Assembly, April 21, 2020
- 3) Yellow highlighted values denotes exceedance and/or equal to Michigan Residential Drinking Water criteria
- 4) Orange highlighted values denotes exceedance and/or equal to Nonresidential Drinking Water criteria
- 5) Grey shaded values denotes exceedance and/or equal to Michigan Groundwater Surface Water Interface criteria
- 6) Values in blue denotes exceedance and/or equal to Residential Direct Contact criteria
- 7) Boxed values denotes exceedance and/or equal to Nonresidential Direct Contact criteria
- 8) Values in bold denotes exceedance and/or equal to Residential Site-Specific Volatilization to Indoor Air criteria for basement and/or slab-on-grade.
- 9) Underlined values denotes exceedance and/or equal to Nonresidential Site-Specific Volatilization to Indoor Air criteria for basement and/or slab-on-grade.

Abbreviations:

%	Percent
ug/kg	Micrograms per kilogram
ft. bgs	feet below ground surface
<	Not detected above the laboratory reporting limit
>/<50k	Greater than 50,000 or less than 50,000
BASE	Basement
J	Estimated value less than reporting limit, but greater than MDL
M	Result reported to MDL not RDL
NA	Not analyzed
NR	Nonresidential
R	Preliminary Result
Res	Residential
SOG	Slab on Grade
SSVIAC	Site-Specific Volatilization to Indoor Air Criteria
U	Compound was analyzed for but not detected. The associated value is the compound quantitation limit.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

GORDON E. GUYER, Director

February 3, 1988

Mr. Gerald A. Moore, Superintendent
Plant Engineering
GM C-P-C Fiero Assembly
One Pontiac Plaza
Pontiac, Michigan 48053

Dear Mr. Moore:

SUBJECT: GM C-P-C Fiero Assembly
MID 005 356 910
Closure Plan Approval/Closure Certification

Michigan Department of Natural Resources (MDNR) has reviewed the closure plan and closure certification most recently submitted on November 17, 1987 and has found them to be acceptable.

As a result, MDNR is approving the closure plan and closure certification and releasing GM C-P-C Fiero Assembly from the financial assurance requirements for closure under 40 CFR 265.143(h) for the container storage area that was closed. However, the closure cost estimate must be revised and financial assurance provided for the container storage area now being used.

Approval of closure of a Resource Conservation and Recovery Act (RCRA) interim status unit does not release the facility from its responsibilities under the Hazardous and Solid Waste Amendment of 1984 (HSWA). Closure does not terminate interim status and, therefore, the company may be responsible for corrective action if U.S. EPA or MDNR determines that a release of hazardous waste or hazardous waste constituents is taking or has taken place from a solid waste management unit as defined under HSWA.

Mr. Gerald A. Moore

- 2 -

February 3, 1988

The closure of this storage pad was unique in that most of the closure was carried out before a plan was submitted to MDNR. This is not an acceptable practice. In the future, GM C-P-C Fiero must submit any construction or closure plans related to the hazardous waste storage area for MDNR approval before construction may begin.

If you have any questions, please contact Mr. Stephen Blayer at 517-373-7739 or me.

Sincerely,

Alan J. Howard, Chief
Waste Management Division
517-373-9523
