

Weekly Summary Report

Project No.: RACER Trust - ISS Remedial Implementation Week Starting: 8/1/2022
 Site Location: 1723 North Washington Street, Kokomo, Indiana

REMEDIATION UPDATE

Completed Activities:

Completed excavation of overburden in Cell I, H, and G. Began excavation of overburden in Cell E. Completed soil stockpile sampling for samples SS-08, SS-09, SS-10, SS-11, and DUP-01 which was collected at SS-10. Zero-valent iron (ZVI) deliveries occurred throughout the week in preparation for Step 1: ZVI Mixing. Utilized water truck throughout the day for dust suppression in the excavation and MSA. Conducted perimeter air monitoring at air stations (ppbRAE and DustTrak), as well as with the VOCAM mobile GC unit. No air samples collected. Installed new weather station due to inoperable rain gauge.

Summary of Problems and Resolutions:

1. Weather station was not reporting correct rain measurements. Installed new weather station on 08/05/2022.
2. Lightning created a stop work in the morning on 08/01/2022. Work resumed 30 minutes after last lightning strike within 10 mile radius of the Site.

Projected Work for Next Two Weeks:

Continue excavation of overburden on the of the northern excavation, trending northward (towards Area A).
 Receive batch plant deliveries for ZVI Mixing. Projected beginning of Step 1: ZVI Mixing during Week Beginning 08/22/2022.
 Continue to monitor air stations and conduct mobile air monitoring with the VOCAM portable gas chromatography unit.
 Sample stockpiled soil as areas are completed.
 Review and validate analytical data from baseline air monitoring completed during overburden, baseline groundwater monitoring, and stockpile soil sampling.

Air Monitoring Summary (Summary of results, alarms, exceedances):

VOCs (ppbRAE) 5-Minute Average: Maximum value: 181 ppb; Exceedances: 0

PM10 (DustTrak) 15-Minute Average: Maximum value: 55 ug/m3; Exceedances: 0

TCE Field Data (VOCAM): Maximum value: ND; Exceedances: 0

Analytical Sample Summary

Analytical Samples Collected: 0 Air Samples, 4 Soil Samples, 0 Groundwater Samples

Analytical Sample Data Received:

30 Air Samples from Baseline Air Sampling (07/18/2022) and beginning of Overburden Excavation Sampling (07/20/22, 07/21/2022, 07/25/2022, 07/26/2022, 07/27/2022) analytical data received. Analytical reports in validation process. Preliminary results show no exceedances of the air monitoring plan screening levels.

Four stockpile soil samples analytical data received. No soil concentrations observed above 100 mg/kg.

Operation and Maintenance Issues, if any:

1. Only one round of VOCAM air measurements conducted on 08/01/2022 due to heavy rain and lightning in the morning.

No excavation occurred during this time

Corrective Actions, if any:

None.

Weekly Summary Report

 Site Location: 1723 North Washington Street, Kokomo, Indiana

REMEDIATION UPDATE

Completed Activities:

Completed excavation of Cell J, began excavation on Cell I. Collected soil samples from Material Stockpile Area (MSA). Continued daily air monitoring with air monitoring stations and VOCAM portable air monitor. Completed Day 3, 4, and 5 of air sample collection during the beginning of excavation. Covered the stockpile area during non-use and at the completion of each day. Segregated concrete debris and piping from old building infrastructure and stockpiled to the south of Area J. Covered the construction debris stockpile with plastic sheeting and surrounded the debris stockpile with straw waddle each day. Uncovered large concrete building footing to the southwest of Area I, could not remove. Second work area entrance installed on Butler Street which shall serve as the main Site entrance. Washington Street entrance for shipments and deliveries only.

Summary of Problems and Resolutions:

1. VOCAM portable air monitor required resetting of the retention times on Thursday, 7/28/2022.
2. Large concrete building footer uncovered to the southwest of Area I excavation cell, largely in area of excavation area sloping. Could not be removed at the time, will discuss options with EPA.
3. Perimeter fencing to the north and west of the site blew over during recent storms. GSI used rebar anchors drilled into asphalt to stabilize fence in the asphalt areas.

Projected Work for Next Two Weeks:

Continue excavation of overburden on the southern side of the northern excavation (at Area I) trending northward (towards Area A).
 Continue to monitor air stations and conduct mobile air monitoring with the VOCAM portable gas chromatography unit.
 Sample stockpile soil as areas are completed.
 Review analytical data from baseline air monitoring completed during Phase I, baseline groundwater monitoring, and stockpile soil sampling.

Air Monitoring Summary (Summary of results, alarms, exceedances):

VOCs (ppbRae) 5-Minute Average: Maximum value: 436 ppb; Exceedances: 0

PM10 (DustTrak) 15-Minute Average: Maximum value: 56 ug/m3; Exceedances: 0

TCE Field Data (VOCAM): Maximum value: ND; Exceedances: 0

Analytical Sample Summary

Analytical Samples Collected: 18 Air Samples, 7 Soil Samples, 21 Groundwater Samples

Analytical Sample Data Received to Date: None.

Operation and Maintenance Issues, if any:

1. Anchor air stations into ground.
2. Recalibrate and troubleshoot VOCAM monitor on Thursday, 7/28/2022.

Corrective Actions, if any:

None.

Excavator was being used to collect soil samples from the stockpile (MSA) area. AA-4 is approximately 500 feet from the MSA. Wind was blowing at 0 mph to the SE. AA-4 was not downwind from the MSA. Was collecting laboratory sample AA-4 (07252022) at this time. Based on observed peak to peak noise, result is flagged as non-detect. A few things could cause this "peak to peak" noise including a dirty PID bulb (not likely), not letting the unit warm up enough prior to a run (not the case here), overheating (most likely cause). When the case temperature becomes too hot, it can cause the pre-concentrator chip to give off small amounts of substances that show up as this noise.

Weekly Summary Report

Project No.: RACER Trust - ISS Remedial Implementation

Week Starting: 7/18/2022

Site Location: 1723 North Washington Street, Kokomo, Indiana

Remediation Update

Completed Activities:

Completed construction of temporary stockpile area on the northern parking lot. Completed baseline air monitoring. Started to excavate overburden soils from Area J (southern area) and transport to the stockpile area. Protect stormwater inlets and covered the stockpile area during non-use and at the completion of each day. Segregated concrete debris and piping from old building infrastructure and stockpiled to the south of Area J. Covered the construction debris stockpile with plastic sheeting and surrounded the debris stockpile with straw waddle each day.

Summary of Problems and Resolutions:

1. Some pieces of air monitoring equipment required replacement. Remaining equipment was used to adequately monitor fence line stations.
2. Old building footers and empty piping were identified during the excavation. Material was segregated into southern debris stockpile area for characterization and off-site disposal.
3. Two stormwater inlets identified as needing protection. Covered and surrounded with geotextile and straw waddle, and ordered materials to further cover stormwater inlets.

Projected Work for Next Two Weeks:

Continue excavation of overburden starting on the southern side of the northern excavation (at Area I) trending northward (towards Area A).

Continue to monitor air stations. Complete the 5 days of air samples during Phase 1: Excavation. Continue air monitoring stations.

Sample stockpile as areas are completed.

Install second work area entrance gate on Butler street.

Complete baseline groundwater monitoring.

Air Monitoring Summary (Summary of results, alarms, exceedances)

VOCs (ppbRae) 5-Minute Average: Maximum value: 1079; Exceedances: 3

SUMMARY: Faulty PID meters (PPBRaes) originally used. Swapped out faulty meters for new ones by 7/20/22.

No VOC exceedances after all PID meters had been replaced after 7/20/22.

PM10 (Dustrak) 15-Minute Average: Maximum value: 175; Exceedances: 1

SUMMARY: AA-1 recorded 15-minute PM-10 dust over 75 ug/m3 from 7:38 to 8:07 on 7/19/2022. No excavation was occurring.

TCE Field Data (VOCAM): Maximum value: 19.53; Exceedances: 1

Analytical Samples Collected: 15

Analytical TCE Data Received: NO

Operation and Maintenance Issues, if any:

1. Replaced 3 PID meters (PPBRaes) due to inoperable air pumps.

Corrective Actions, if any:

None.

Did not retain calibration gas (span cal) values from this event, but did confirm that each unit was within the calibration window. ppbRAE calibrated by running a zero-calibration using carbon filter, then a span calibration.The DustTrak was zero-calibrated with an air filter. Left all ppbRAEs and DustTraks in the field (at their respective air station) over night.
EST	AA-2	7/18/2022	10:10	015592	2	Y	304-402176499-1	8/18/2022	NR	Y	31112	10:10	Y	The ppbRAE in AA-02 (Serial #15592) did not show decreasing concentrations after the span calibration. Discussed issue with Pine equipment vendor, and Pine determined the air pump was inoperable. Did not deploy any ppbRAE in the air station AA-2 for baseline monitoring (received approval from EPA). Pine shipped a new ppbRAE to the site for delivery tomorrow.

EST	AA-1	7/19/2022	8:30	038262	6	Y (2 ppb)	NA	NA	NA	NA	23630	9:00	Y	Calibrated all instruments in the field at their respective station. ppbRAEs and DustTraks were calibrated with a zero-calibration. Brought all ppbRAE's inside at night. Left all DustTraks in the field overnight. No excavation occurred on this day.
EST	AA-2	7/19/2022	8:43	038261	7	Y	304-402176499-1	8/18/2022	NR	N	31112	9:05	Y	New ppbRAE arrived (SN# 038261). This unit replaces faulty ppbRAE SN# 015592. Conducted a span calibration on the new ppbRAE for AA-2. PID readings did not decrease to zero after the span cal, but tried to deploy this unit in the AA-2 air station regardless. Recorded abnormally high PID readings. Pine determined to be due to faulty air pumps in the unit. Pine shipped a new ppbRAE to the site for delivery tomorrow.
EST	AA-3	7/19/2022	9:04	022773	8	Y	NA	NA	NA	NA	19626	9:10	Y	Observed abnormally high PID values in air station AA-3(SN# 22773). Swapped the ppbRAE from AA-3 (SN# 22773) into AA-5 at 12:45. Observed same abnormally high values. Pine determined to be due to faulty air pumps in the unit. Pine shipped a new ppbRAE to the site for delivery tomorrow. Moved the ppbRAE from AA-5 (SN# 050584) into AA-3.
