MEMORANDUM

TO:	Darlene Stringer, MDEQ Sara Pearson, MDEQ Matt Gamble, MDEQ	REF. NO.:	017360-T05
FROM:	Jeni Quigley/bw/57/Pwl.	DATE:	July 24, 2012
CC:	David Favero, RACER		
RE:	**Data Package** **2011 Site-Wide Investigation – Stage II** **Former Grand Rapids Metal Plant** **Wyoming, Michigan**		

Conestoga-Rovers & Associates (CRA), on behalf of Revitalizing Auto Communities Environmental Response (RACER) Trust, conducted soil and groundwater investigation activities at the former Grand Rapids Metal Plant property located at 300 36th Street SW in Wyoming, Michigan (Site). The scope of work (SOW) implemented was presented in the memorandum entitled *Proposed Sample Locations, 2011 Site-Wide Investigation – Stage II, Former Grand Rapids Metal Plant, Wyoming Michigan*, submitted to the Michigan Department of Environmental Quality (MDEQ) on August 16, 2011. The protocols utilized during the implementation of the August 16, 2011 SOW were described in the Site-Wide Investigation Work Plan (Work Plan), submitted to the MDEQ on January 7, 2011. The samples were collected during the field investigation conducted between September 21, 2011 and October 19, 2011. At the approval of the MDEQ, the October 2011 Semi-Annual Groundwater Monitoring activities were completed in conjunction with Stage II of the Site-Wide Investigation. This memorandum (Memorandum) has been prepared to present the "Data Package" summarizing the data collected during Stage II of the Site-Wide Investigation field activities.

Soil and Groundwater Investigation Activities

Field activities included the advancement of soil borings and the collection of soil, groundwater, and borehole water samples. Table 1 presents a summary of groundwater elevation data collected during the Stage II Site-Wide Investigation. Figure 1 presents a groundwater contour map, based on groundwater elevations collected in September 2011. Plan 1 presents the sample locations. Stratigraphic soil boring logs and well construction details are included in Attachment A.

Analytical results for the soil and groundwater samples were evaluated against the Generic Residential and Non-Residential Cleanup Criteria and Screening Levels established in Part 7 of Administrative Rules, effective March 25, 2011, pursuant to Part 201, Environmental Remediation, 1994 PA 451, as amended. In addition, analytical results for polychlorinated biphenyls (PCBs) were evaluated against the High Occupancy Area Cleanup Level of 1 part per million (ppm) for bulk remediation waste (without further conditions) set forth in the Toxic Substances Control Act (TSCA). Table 2 presents a Sample Summary. Analytical results for soil and groundwater samples compared to the aforementioned criteria are presented in Tables 3 and 4, respectively. Plan 2 presents exceedances of the Part 201 Generic Residential and Non-Residential Cleanup Criteria in soil to date, including the data collected during the 2011 Site-Wide Investigation – Stage II, for the Site with the exception of the Bulk Unload Area. Exceedances of the Part 201

Generic Residential and Non-Residential Cleanup Criteria in soil to date, including the data collected during the 2011 Site-Wide Investigation – Stage II, for the Bulk Unload Area of the Site is presented on Plan 3. Plan 4 presents exceedances of the High Occupancy Area Cleanup Level of 1 ppm for bulk remediation waste (without further conditions) set forth in TSCA. Plan 5 presents exceedances of the Part 201 Generic Residential and Non-Residential Cleanup Criteria in groundwater from the data collected during the 2011 Site-Wide Investigation – Stage II.

Samples were not collected from several locations proposed in the Work Plan due to the presence of equipment/material obstacles, energized switches, and refusal during drilling. A brief list and description of variances from the Work Plan is provided below:

Location	Deviation
HP28-11/ MW28-11	Not installed at this time due to requirement for procurement of access agreements due to off-Site sample location (This will become MW32-12 when installed, due to the installation of MW28-12 in the former 3,000-gallon diesel and 8,000-gallon gasoline UST area
HP29-11/ MW29-11	Not installed at this time due to requirement for procurement of access agreements due to off-Site sample location
HP30-11/ MW30-11	Not installed at this time due to requirement for procurement of access agreements due to off-Site sample location
SB59-11	Not installed at this time due to equipment/demolition debris on ground surface
SB128-11	Not installed at this time due to operation of current Switch House (an alternative evaluation of the PCBs identified in concrete may be proposed)
SB129-11	Not installed at this time due to operation of current Switch House (an alternative evaluation of the PCBs identified in concrete may be proposed)
SB141-11/ MW31-11	Not installed at this time due to the similarity in scope to the off-Site locations, which will be performed at the same time in the interest of budget
Basement Substation Concrete Cores	Not conducted at this time due to the fact that RACER and the current property owner's consultant are partnering on this work; work to be performed by Soils and Materials Engineers (SME)

In addition to the SOW proposed in the August 16, 2011, 15 additional soil borings were proposed to the MDEQ via email on September 26, 2011. The 15 additional soil borings were proposed to further evaluate the extent of PCBs detected in soil at concentrations above the TSCA High Occupancy Area Cleanup Level of 1 ppm for bulk remediation waste (without further conditions) at soil boring locations SB61-11, SB100-11, and SB124-11. Soil borings were advanced to a depth of 10 feet bgs adjacent to each of the original boring locations and to the north, south, east, and west of the original borings on a 10-foot spacing grid. Soil samples were collected in 2-foot intervals, with the shallow (0 to 2-foot) intervals analyzed on an accelerated 1-week turnaround time, with the lower intervals held pending results for the upper intervals. If the 2-foot interval result was less than 1 ppm, the lower intervals were not analyzed. Soil boring advancement and soil sample collection and analysis were conducted in accordance with the Work Plan.

Residential Property Owner Concern – 3547 Hillcroft Avenue SW

A Notice of Migration (NOM) of Contamination was submitted to MDEQ and all known or suspected impacted property owners pursuant to Part 201, Environmental Remediation, of the Natural Resources and

Environmental Protection Act, 1994 Public Act 451, as amended, and the Part 201 Administrative Rules promulgated thereunder on August 18, 2011.

Subsequent to distribution of the NOM, RACER Trust received a phone call from the property owner at 3547 Hillcroft Avenue SW (, Mr. Donald Bradley, on August 23, 2011. Mr. Bradley expressed concern to RACER Trust regarding what he described as "surface oil on bare ground" adjacent to the south of his property along the fence line on the former Grand Rapids Metal Plant property. Mr. Bradley indicated that he acquired the property in the winter of 2011 and this area was covered with snow at the time.

As described in the memorandum entitled *Resident Concern, 3547 Hillcroft Avenue SW, Wyoming, Michigan*, submitted to the MDEQ under separate cover on December 20, 2011, a visual inspection of the area in question was conducted on August 25, 2011. Based on the visual inspection, a definitive source of the staining could not be ascertained from the visual inspection. Subsequently, on October 6, 2011 CRA mobilized to the Site to remove the visually impacted soil. Approximately 2.7 cubic feet of visually impacted soil was removed from the oil-stained area. This area was backfilled with sand and covered with topsoil. The impacted soil was transported to the Site and placed into 55-gallon drums that contained soil cuttings from the Site-wide investigation drilling activities for future characterization and off-Site disposal. A composite soil sample was collected from the excavated material and the investigation-derived waste generated during the Site-wide investigation activities for waste characterization purposes. Based on the analytical results, the waste was non-hazardous was disposed off-Site.

Basement Floor Drains

In November 2011, during decommissioning activities, free phase oil and water were observed by MCM Management Corporation (MCM), the decommissioning/demolition contractor for the current property owner, the Wyoming Brownfield Redevelopment Authority (WBRA), and Soils and Materials Engineers, Inc. (SME), the environmental consultant for MCM, in the northern portion of the basement from an unknown source, which may include a source below the basement floor or existing floor drains and/or sumps. The free phase liquid and water were observed to be emanating from floor drains in the irregularly shaped basement area approximately bound by former Columns B to K and former Rows 7 to 17. Review of historical drawings indicates that these floor drains connected to press pit sumps in the basement, which were identified during the Current Conditions Report development by Site personnel to discharge to the former on-Site Wastewater Treatment Plant (WWTP). Subsequently, it was determined that as part of the decommissioning/demolition activities, MCM would plug identifiable and accessible floor drains north of former Row 20 and any other drains and sumps from which oil was observed or suspected to emanate. Residual water and oil were removed, to the extent possible, from the floor drain piping and sumps immediately before plugging the drains and/or sumps, which were plugged with a solid, cementicious material. After the drains and/or sumps were plugged, the floor areas were decontaminated. It was also determined that the basement floor slab would not be cracked north of Row 20 (or 40 feet south of the southernmost drain and/or sump in which the oil was observed), whichever was farther south. It is planned that the basements will be backfilled during the demolition activities, in accordance with the original plans.

Former Underground Storage Tanks (USTs)(AOI 8.2)

One 8,000 gallon gasoline underground storage tank (UST) and one 3,000 gallon diesel UST were removed from the Site on behalf of the WBRA on November 30, 2011. CRA and MDEQ staff were present to observe the tank removal. No visual or olfactory indication of impact to soils was observed after both tanks were removed; therefore, CRA did not collect soil samples for analysis at that time. Photographs taken during

UST removal activities are included in Attachment B. Analytical results for Site Assessment floor samples collected by SME on behalf of the WBRA identified the presence of various PNAs above the required Part 213 detection limits. Additionally, naphthalene was identified at a concentration above the Part 213 Groundwater Surface Water Protection Risk-Based Screening Level (RBSL) in the southern floor sample taken from beneath the diesel UST. Based on the detections and exceedance, SME submitted a confirmed release (No. C-0193-11) report to the MDEQ on December 9, 2011.

Initial Assessment Report (IAR) field activities were conducted in February 2012 by CRA on behalf of RACER. The results of the investigation are summarized in the IAR, submitted to the MDEQ under separate cover on April 9, 2012. Based on the results, no further exceedances of the Part 213 RBSLs were identified, including no Part 213 GSI RBSL exceedances in a groundwater sample collected from a permanent monitoring well adjacent to the original floor sample location. Based on discussions with MDEQ staff on April 12, 2012, the IAR will be resubmitted as a Closure Report.

Former Hydraulic Elevator Pits (AOI Nos. 30.1, 30.2, and 30.3)

A passenger elevator was located near the former office area of the plant, near Column Zb, Row 5 (AOI 30.1). Upon removal of the belowgrade piston associated with the elevator, CRA observed the condition of the pit on March 7, 2012 to document conditions. No significant staining was noted on the concrete surface of the former elevator pit. No sump was observed to be present in the elevator pit; however, the presence of minor amounts of demolition debris limited a complete observation of the area. Based on the observations made by CRA on March 7, 2012, no further evaluation of the AOI 30.1 area is recommended.

Freight elevators were located within the manufacturing portion of the plant, near Column O, Row 26 (AOI 30.2) and Column N, Row 45 (AOI 30.3). CRA was on-Site on December 7, 2011 to observe the pits and the removal of the pistons from AOI 30.3. Minor staining was observed on the concrete surface of the elevator shaft located near Column O, Row 26 at the time of removal; however, on-Site representatives indicated that the staining was from the removal of the piston and was not present prior to removal. Based on the observations made by CRA on December 7, 2011, no further evaluation of the AOI 30.2 area is recommended. Standing oil was present in the pit of the former freight elevator associated with AOI 30.3. Additional oil was released into the concrete pit during the removal of the pistons. All oil was removed from the pit upon completion of piston removal and the pit was cleaned prior to backfilling with crushed stone. No evidence of significant cracks or staining, or a drop in the fluid level within the pit was observed by CRA. Based on the observations made by CRA on December 7, 2011 and analytical data in the general vicinity of the former elevator, no further evaluation of the AOI 30.3 area is recommended by CRA.

Photographs taken during elevator pit inspection activities are included in Attachment C.

Please contact David Favero at (217) 741-6235 or Jeni Quigley at (269) 685-5181 with any questions or regarding this Memorandum or the enclosed information.

Notes:
VOCs - Target Compound List Volatile Organic Compounds
SVOCs - Target Compound List Semi-Volatile Organic Compounds
PAHs - Polycyclic Aromatic Hydrocarbons
Metals - Antimony, Arsenic, Barium, Beryllium, Cadmium, total Chromium, Cobalt, Copper, Lead, Manganese, Mercury, Nickel, Selenium, Silver, Thallium, Vanadium, Zinc
PCBs - Polychlorinated Biphenyls
QC - Quality Control
MS/MSD - Matrix Spike /Matrix Spike Duplicate
[1] - Borehole water samples were field filtered for dissolved metals

Area of Interest							Inhalation	Inhalation	Inhalation	Inhalation	Thickness	Thickness	Thickness	Thickness						
Sample Type																				
	Units	a	b	c	d	e	f	g	h	i	j	k	l	m	n	o	p	q	r	s

Notes:

[1] Cleanup criteria identified by MDEQ RRD Op Memo No. 1, updated 3/25/2011, pursuant to 1994 PA 451 as amended.

[2] Toxic Substances Control Act (TSCA) Criterion for bulk PCB remediation waste in High Occupancy Areas (40 CFR 761.61(a)(4)(i))

[3] 1,2-Dibromoethane also known as Ethylene dibromide

[4] 2-Butanone also known as Methyl ethyl ketone (MEK)

[5] 4-Methyl-2-pentanone also known as Methyl isobutyl ketone (MIBK)

[6] Carbonate Hardness of 150 mg/L was used to calculate Groundwater Surface Water Interface Protection Criteria.

-- Parameter was not analyzed.

U - Not present at or above the associated value.

J - Estimated concentration.

UJ - Estimated reporting limit.

R - Rejected.

ID - Insufficient data to develop criterion.

NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.

NLL - Hazardous substance is not likely to leach under most soil conditions.

NLV - Hazardous substance is not likely to volatilize under most conditions.

Exceeds Generic Cleanup Criteria.

Superscript letter notes the criterion exceeded.

Notes:

[1] Cleanup criteria identified by MDEQ RRD Op Memo No. 1, updated 3/25/2011, pursuant to 1994 PA 451 as amended.

[2] 1,2-Dibromoethane also known as Ethylene dibromide

[3] 2-Butanone also known as Methyl ethyl ketone (MEK)

[4] 4-Methyl-2-pentanone also known as Methyl isobutyl ketone (MIBK)

[5] Carbonate Hardness of 150 mg/L was used to calculate Groundwater Surface Water Interface Protection Criteria.

-- Parameter was not analyzed.

U - Not present at or above the associated value.

J - Estimated concentration.

UJ - Estimated reporting limit.

R - Rejected.

ID - Insufficient data to develop criterion.

NA - A criterion or value is not available or, in the case of background and CAS numbers, not applicable.

NLL - Hazardous substance is not likely to leach under most soil conditions.

NLV - Hazardous substance is not likely to volatilize under most conditions.

[ ] - Exceeds Generic Cleanup Criteria.

Superscript letter notes the criterion exceeded.
