Thank you Jim,
We will work with the soccer association that maintains the fields through their use of the property and see if they can't apply grub control when they fertilize the fields.

It is a pleasure working with you and I just want to wish you and yours a Merry Christmas and a Happy New Year.

Look forward to working with you in 2017,
CSY

Dave and Cliff,

I received your Annual Landfill Cap Inspection. I suggest you consider controlling the grubs as a way to control the moles. Grubs are one of the main food sources of moles. Grubs flourish on the roots of healthy grass. It's my understanding that reducing or eliminating grubs will cause the moles to move elsewhere in search of food.

I may be completely daft, but it might be worth your consideration.
