Dear Dr. Richards:

Subject: Groundwater Sampling Report (April 2007) Review and Outstanding Land Use Agreement Issues at the Linden Road Landfill site

The Department of Environmental Quality (DEQ) has completed review of the Groundwater Sampling Report (April 2007) of Selected Monitoring Wells for Evaluation of Vinyl Chloride at the subject facility. This report was received by the DEQ on May 3, 2007.

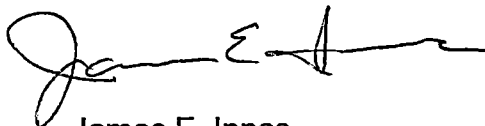

The proposal to discontinue select groundwater sampling for vinyl chloride migration is denied. The DEQ's Lansing District Office Quality Review Team (QRT) found there was insufficient data to grant your request. In order to determine if there are any seasonal variation present, the QRT requests three additional samples from the selected wells. These samples should be taken in summer, fall, and winter. If the results of these three sampling events show no exceedances of criteria in MW-14s and MW-3s does not show a marked increase in vinyl chloride, the request for no further groundwater sampling will be granted.

Also, in September of 2006 the DEQ sent a correspondence stating what were considered outstanding issues with your request to eliminate the Financial Assurance Mechanism (FAM) from the Land Use Agreement, which is the basis for the limited closure at the Linden Road Landfill Facility. A copy of this correspondence is enclosed.

Please confirm you intent to comply with the sampling request and address the FAM issues as they relate to the additional sampling.

Feel free to contact me if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "James E. Innes". The signature is fluid and cursive, with a large initial "J" and a distinct "E".
