Sanitary Sampling and Survey Locations_v1.pdf;

Evin et al.,

This email is to inform you of additional work that will be completed at the Buick City site including a survey of invert elevations at select sanitary and storm sewers, and the collection of a round of samples from the Stewart Avenue and James P. Cole sanitary sewers. The location of the proposed sampling and survey locations are summarized on the attached **Figure 1**.

The sewer survey will include the unnamed sanitary manholes along Industrial Ave adjacent to LNAPL #10, the Stewart Avenue and James P. Cole sanitary sewers, the Hamilton Road/Industrial Avenue sanitary sewers, and several of the storm water outfalls. The sanitary sewer samples will be collected and analyzed for PFAS at locations, and using methods, consistent with approved October 1, 2025, *James P Cole Boulevard and Upgradient Sanitary Sewer Sampling Plan*.

The work is currently planned for March 30-21, 2026. Please let us know if you have comments or questions, thank you.

Patrick
