Thierry – Please find attached photo log documentation of the well improvements completed on May 31, 2023 in response to the inspection findings from March 2, 2023 (Inspection Letter attached). Weep holes have been drilled in

wells MW-200C, MW-204A, and MW-203C. Additionally, sand was added between the well riser and protective casing at MW-200C. Please let us know if you have any other concerns regarding the well maintenance at the site.

Thank you,
Sarah
