COMMENTS FROM GEOLOGIST:

I believe the decision on this depends on the terms of the monitoring plan in the RAP. A check of my work file indicates I may not have looked at this one since 1999, and that's a lot of history to have to go back through to figure out what agreements were made. This request does not reference the RAP, state anything about the history of the site, what has been agreed to regarding monitoring, etc. I guess this can all be discussed at QRT. There are two annual sampling events with data at or below drinking water criteria for vinyl chloride in offsite well MW-14S. The well at the property boundary still slightly exceeds criteria.
