VOC	volatile organic compound

Executive Summary

This Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) Supplemental Phase 2 Activities Summary Report has been prepared on behalf of the Revitalizing Auto Communities Environmental Response (RACER) Trust and summarizes the additional RFI activities completed at the Lansing Plants 2, 3, and 6 located in Lansing, Michigan (the Site). The supplemental RFI activities were completed following the submittal of the *Resource Conservation and Recovery Act Facility Investigation Phase 2 Activities Summary Report* (RFI Phase 2 Report; ARCADIS of Michigan, LLC [ARCADIS] 2013a) to the Michigan Department of Environmental Quality (MDEQ), dated April 4, 2013. The RFI Phase 2 Report outlined several data gaps that required additional investigation before the RFI could be considered complete.

Additional fieldwork to address these data gaps was completed between March and December 2013. Based on the additional soil and groundwater data collected at the Site, the relevant exposure pathways identified as part of the Exposure Pathway Analysis (RFI Phase 2 Report) remain valid. This report has been prepared as an addendum to the RFI Phase 2 Report and is not intended as a standalone submittal.

Findings and Conclusions

The RFI to date has adequately characterized the nature and extent of impacts and risk associated with the Site. The data collected allows for the completion of the Final CMS pending the additional transport evaluations and monitoring of the lower 1,4-dioxane plume. The following describes each of the data gaps outlined as part of the RFI Phase 2 Report, provides a brief overview of the scope of work completed, and offers conclusions based on the results of the 2013 RFI supplemental activities:

<u>Lower 1,4-Dioxane:</u>

Plant 3, Deep Overburden (Area 11): At the end of the Phase 2 investigation, the constituent of concern (COC) 1,4-dioxane was detected at deep overburden, greater than 65 feet below ground surface (ft bgs) at concentrations above the current Drinking Water (DW) Criteria. Additional work was completed to characterize and define the extent of lower 1,4-dioxane impacts. The scope of work included 41 deep vertical aquifer profile borings, installation of 24 deep monitoring wells, collection of groundwater samples from new and existing wells in the area of impact, sampling of two nearby municipal wells for 1,4-dioxane, and hydraulic testing of the deep

overburden and bedrock wells installed along the defined 1,4-dioxane plume. Review of the lower 1,4-dioxane investigation results indicates the following:

- Delineation of the lower 1,4-dioxane plume is complete as the lower 1,4-dioxane plume is defined horizontally and vertically. The source area for the lower 1,4-dioxane plume is located beneath the "coliseum" on the southwestern portion of Plant 3. The lower 1,4-dioxane plume is approximately 2,400 feet long and migrates from the coliseum to the south-southwest within the deep overburden and weathered bedrock zones at depths typically between 65 to 75 ft bgs. Bedrock wells both along the axis of the plume and within the surrounding area indicate 1,4-dioxane has not migrated into the underlying bedrock. The morphology and concentration of 1,4-dioxane along the axis of the plume suggest the plume may still be migrating to the south. Additional transport evaluations and monitoring will be completed to support the June 2014 Corrective Measures Study (CMS) submittal.

- Benzene and acetone exceed DW Criteria at locations generally coincident with the lower 1,4-dioxane plume. Benzene and acetone within the weathered bedrock are defined to DW Criteria except for benzene to the east near Saginaw Avenue at Monitoring Well MW-13-49. Confirmatory sampling results are pending; if results are below criteria, no additional investigation is warranted. If results exceed criteria, a step out monitoring well location will be considered east of this location. Because the benzene and acetone impacts are co-located with the 1,4-dioxane, the CMS strategy for mitigation of 1,4-dioxane will also address benzene and acetone.

Metals:

There are several areas at the Site where metals in perched water marginally exceed the Groundwater Surface Water Interface (GSI) and/or DW Criteria near to the property boundary. Even though there are exceedances of criteria, these results do not suggest there is concern under current conditions. Perched groundwater in these locations is not used as a drinking water resource and unlikely to be used for drinking water in the future. Existing or potential off-site exceedances for metals will be addressed as part of the CMS.

- Northern Plant 3 (Areas 14, 17, and 18): Arsenic was detected in soil at the eastern and western Plant 3 property boundaries in historical soil samples at concentrations above the current Part 201 Drinking Water Protection (DWP)

Criteria. Additional work included four soil borings advanced adjacent to historical borings to verify the extent of arsenic in soil. Soil borings completed as part of the supplemental activities indicate all samples were below criteria for arsenic. Arsenic in soil is therefore defined at the property boundary.

- Plant 3, Area 16: Additional work was completed in this area to define metals in soil and groundwater. The scope of work included two soil borings near the property boundary, installation of three monitoring wells and collection of groundwater samples for metals and other site COCs.

    - Additional soil samples collected at the eastern property boundary indicated several metals still exceed criteria; however, the adjacent property is a 200 ft wide rail yard easement and the owner has refused to allow access for additional sampling.

    - Groundwater samples collected in November 2013 from monitoring well MW-13-32 at the eastern property boundary indicate manganese and nickel exceed DW Criteria. Lead exceeded DW Criteria during the August 2013 sampling event and appears to be associated with turbidity.

- Plant 6, Area 7: The extent of metals in groundwater south of Area 7 was not defined to Part 201 Criteria. An additional off-site monitoring well was installed south of the Site and additional groundwater samples were collected from the new well and the existing wells. Vanadium has been detected off-site at concentrations of 0.008 and 0.005 mg/L, slightly above the DW Criteria of 0.0045 mg/L, and arsenic has been detected off-site at a concentration of 0.015 mg/L, slightly above the DW Criteria of 0.010 mg/L.

- Plant 6, Area 5-8: Vanadium in groundwater exceeds DW Criteria at a well located 200 feet from the eastern property boundary. An additional monitoring well was installed between the well and the Plant 6 property boundary to delineate vanadium in groundwater. Sampling of the new monitoring well indicates vanadium at a concentration of 0.005 mg/L, slightly above the DW Criteria of 0.0045 mg/L.

- Plant 6, Bedrock Metals: Metals above DW Criteria have been detected at Plant 6 in historical bedrock wells MW-04-06 and MW-04-04. Well MW-04-06 has also historically indicated vinyl chloride at a concentration of 2 µg/L. In the RFI Phase 2 Report it was postulated that impacts within these wells could be related to well

construction. Both wells were abandoned and replaced in 2013. Follow-up sampling indicates arsenic in both wells at a concentration of 0.021 mg/L, in excess of the DW Criterion of 0.010 mg/L. Vinyl chloride has not been detected in the replacement well MW-04-06R.

Storm sewers/utility corridors:

- Additional Utility Corridor Sampling: At the request of the MDEQ, nine additional soil borings were completed in 2013 adjacent to selected large utility corridors interior to the Site (storm sewers) to evaluate if utility corridors are potential pathways for preferential migration of site-related COCs in groundwater. Based on the utility corridor assessment sampling results, utility corridors at the Site are not a significant pathway for contaminant migration.

- Storm Sewer Monitoring: Two rounds of storm water sampling were completed prior to the RFI Phase 2 Report. Three additional sampling events were completed as part of the additional assessment activities in 2013. Concentrations of metals and xylenes in storm water in excess of the GSI Criteria were detected at the southern Plant 6 outfall during the January 2013 sampling event. Additional samples collected in 2013 have not indicated GSI exceedances at any of the outfalls to the Grand River.

    - Flow measurements were collected of storm water discharge both at the southern Plant 6 outfall and at the Grand River outfall to verify that dilution will reduce the GSI exceedances detected at the Plant 6 to a concentration below criteria at the Grand River. Based on the resulting conservative dilution factor, the maximum concentrations of selenium and xylenes detected at the Plant 6 outfall would be 4-5X below GSI Criteria at the Grand River.

    - Plant 6 Stormceptor ESC-2: Following removal of LNAPL from the stormceptor ESC-2 in January 2013, periodic inspection of absorbent booms and monitoring of ESC-2 has not indicated additional accumulation of LNAPL or occurrence of LNAPL in upgradient storm sewer structures. The occurrence of LNAPL within ESC-2 is attributed to a one-time release either within the former Plant 6 facility or during demolition activities.

Plant 3 Vinyl Chloride Assessment:

Additional characterization was completed on the northern portion of Plant 3 to verify that vinyl chloride detected in deep nested wells on the northwestern portion of Plant 3 was not related to former Plant 3 activities. The scope of work included installation of three additional bedrock monitoring wells, installation of two deep overburden monitoring wells, and sampling of two municipal water supply wells located adjacent to Plant 3.

- Vinyl chloride was not detected at any of the five newly installed bedrock or deep overburden monitoring wells. These results, combined with previous RFI groundwater data, indicate that vinyl chloride in the deep aquifer on the northwestern portion of Plant 3 is not associated with the Site.

- 1,4-Dioxane was detected in the deep overburden at one of the bedrock well boring locations and subsequently defined laterally and vertically utilizing two additional deep overburden wells and the existing deep overburden and bedrock monitoring well network. Based on the results from these wells, the extent of 1,4-dioxane in this area appears limited.

- Municipal Water Supply Wells: Samples were collected from two municipal water supply wells located adjacent to Plant 3. Vinyl chloride was detected in the two deepest samples collected at BWL #10-10 located northeast of Plant 3. Based on the results of the additional characterization outlined above, the vinyl chloride detected at BWL #10-10 does not appear to be associated with Plant 3. VOCs were not detected in the Lansing Township well located west of Plant 3 (TWP #4).

Path Forward

The RFI to date has adequately characterized the nature and extent of impacts and associated risk at the Site and allows for the completion of the Final CMS pending the additional transport evaluations and monitoring of the lower 1,4-dioxane plume. Based on the results of the RFI ARCADIS recommends to following:

- Confirmatory sampling results for benzene at MW-13-49 are currently pending; if the benzene results are below criteria, no additional investigation is warranted. If results exceed criteria, a step out monitoring well location will be considered.

- Passive Flux Meter (PFM) Study - February-March 2014 - Additional characterization of groundwater velocity and flow direction will be completed at monitoring wells installed within the lower 1,4-dioxane plume.

- Bedrock Transducer Study - March 2014 - Additional characterization of the bedrock water levels will be completed in bedrock well located below and near to the lower 1,4-dioxane plume.

The following submittals will be prepared as recommended in the Draft Corrective Measures Study (Draft CMS, ARCADIS 2013b):

- Groundwater Plume Stability and Geochemical Assessment Memo - April 2014 - This submittal will provide a preliminary assessment of plume stability and a geochemical model summarizing groundwater conditions at the Site.

- Final Corrective Measures Study - June 2014 - A Final CMS will be prepared and submitted to MDEQ for review.

- Revised Interim Groundwater Monitoring Plan - April 2014 - This plan will outline the recommendations for continued groundwater monitoring at the Site. The revised plan will be based on the results of the groundwater monitoring to date, the plume stability and geochemical assessment, and additional data required for the development of a groundwater monitoring program to support corrective measures.

1. Introduction

This Resource Conservation Recovery Act (RCRA) Facility Investigation (RFI) Supplemental Phase 2 Activities Summary Report has been prepared on behalf of the Revitalizing Auto Communities Environmental Response (RACER) Trust and summarizes the RFI activities completed at the Lansing Plants 2, 3, and 6 located in Lansing, Michigan (the Site). The location of the Site is shown on Figure 1. The supplemental RFI activities were completed following the submittal of the *Resource Conservation and Recovery Act Facility Investigation Phase 2 Activities Summary Report* (RFI Phase 2 Report; ARCADIS of Michigan, LLC [ARCADIS] 2013a) to the Michigan Department of Environmental Quality (MDEQ), dated April 4, 2013. The RFI Phase 2 Report outlined several data gaps that required additional investigation before the RFI could be considered complete. Additional fieldwork to address these data gaps was completed between March and December 2013. The site layout, along with the areas of investigation referenced below, and sample locations completed as part of the supplemental activities are shown on Figures 2 and 3.

This report has been prepared as an addendum to the RFI Phase 2 Report and is not intended as a standalone submittal. A complete list of major report submittals and key correspondence with the MDEQ is included as Table 1.

In general, constituents of concern (COCs) at the Site were compared to the generic screening criteria established by Part 201 of the Michigan Natural Resources and Environmental Protection Act (Act 451, 1994, as amended). Based on the additional soil and groundwater data collected at the Site, the relevant exposure pathways identified as part of the Exposure Pathway Analysis (RFI Phase 2 Report) remain valid.

All of the data gaps outlined by the RFI Phase 2 Report have been addressed during the supplemental activities. The data gaps outlined within the RFI Phase 2 Report included the following:

<u>Lower 1,4-dioxane:</u>

- Plant 3, Deep Overburden (Area 11): The COC 1,4-dioxane was detected at deep overburden, greater than 65 feet below ground surface (ft bgs) at concentrations above the current Drinking Water (DW) Criteria. Additional work was completed to characterize and define the extent of lower 1,4-dioxane impacts. The scope of work included 41 deep vertical aquifer profile borings, installation of 24 deep monitoring wells, collection of groundwater samples from new and existing wells in

the area of impact, sampling of two nearby municipal wells for 1,4-dioxane, and hydraulic testing of the deep overburden and bedrock wells installed along the defined 1,4-dioxane plume.

Metals:

- Northern Plant 3 (Areas 14, 17, and 18): Arsenic was detected in soil at the eastern and western Plant 3 property boundaries in historical soil samples at concentrations above the current Part 201 Drinking Water Protection (DWP) Criteria. Additional work was completed to define the extent of arsenic in soil at the Plant 3 property boundary. The scope of work included completion of four soil borings adjacent to historical borings with arsenic criteria exceedances. Soil samples at each location were collected at intervals consistent with historical sampling.

- Plant 3, Area 16: The extent of metals (primarily arsenic) in soil and groundwater south and east of Area 16 was not defined to Part 201 Criteria between Area 16 and the Plant 3 property boundary. Additional work was completed in this area to define metals in soil and groundwater, including soil sampling at two soil boring locations near the property boundary, installation of three monitoring wells, and collection of groundwater samples for metals and other site COCs.

- Plant 6, Area 7: The extent of metals including lead, arsenic, and vanadium south of Area 7 was not defined in groundwater to Part 201 Criteria. An additional off-site monitoring well was installed south of the Site and additional groundwater samples were collected from the new well and the existing wells to better define metals exceedances in groundwater.

- Plant 6, Area 5-8: Vanadium in groundwater exceeds the Part 201 DW Criteria at P6-SB-35, located 200 feet from the eastern property boundary. Additional sampling at P6-SB-35 confirmed this exceedance. An additional monitoring well was installed between P6-SB-35 and the Plant 6 property boundary to delineate vanadium in groundwater.

- Plant 6, Bedrock Metals: Metals above DW Criteria have been detected at Plant 6 in historical bedrock wells MW-04-06 (lead) and MW-04-04(4) (arsenic, beryllium, total chromium, cobalt, lead, manganese, nickel, and vanadium). It was postulated that impacts within these wells may be related to well construction. Both wells

were abandoned and replaced to verify if metals were a concern in bedrock at these locations.

Storm sewers/utility corridors:

- Storm Sewer Monitoring: Storm sewer sampling, as outlined in the RFI Phase 2 Report, has indicated groundwater impacts to the storm sewer are minimal and, with one exception (southern Plant 6), indicate that groundwater discharging to storm water does not exceed the Groundwater-Surface Water Interface (GSI) Criteria. Three additional rounds of storm sewer sampling were completed at the Site, and flow measurements were collected at the southern Plant 3 outfall and Grand River to characterize the dilution of the Plant 6 discharge.

- Plant 6 Stormceptor ESC-2: Following the January 2013 cleanout of the stormceptor, monitoring of light nonaqueous-phase liquid (LNAPL) within the stormceptor and upgradient storm structures has not indicated the presence of additional LNAPL. Additional monitoring of the stormceptor was completed during three storm sewer sampling events to verify this condition.

- Additional Utility Corridor Sampling: At the request of the MDEQ, additional sampling was completed adjacent to large utility corridors interior to the Site to evaluate if utility corridors are pathways for preferential migration, both on-site and off-site, of site-related COCs in groundwater. A total of nine soil borings were completed to a depth consistent with the utility invert, and groundwater was collected where encountered.

All of the data gaps outlined within the RFI Phase 2 Report are addressed as part of this Supplemental Report. In addition to the data gaps outlined above, the following work was completed based on discussion with the MDEQ and the Lansing Board of Water and Light (BWL):

- Three additional bedrock monitoring wells and two deep overburden monitoring wells were installed on the northern portion of Plant 3 to verify the RFI conclusion that vinyl chloride detected in bedrock and deep overburden on the northwestern portion of Plant 3 was not emanating from any known Plant 3 VOC source areas. In addition, samples were collected from two municipal water supply wells located adjacent to Plant 3 to determine if groundwater impacts are present in the municipal wells.

The supplemental investigation activities, as well as the results, have been discussed with the MDEQ on a regular basis. MDEQ comments and suggestions were incorporated into the investigation activities whenever possible to help facilitate the RFI review.

1.1 Site Location and Description

The Site (Plants 2, 3, and 6) is located in western Lansing and occupies a total area of approximately 250 acres. The locations of Plants 2, 3, and 6 relative to the greater Lansing area are shown on Figure 1. The construction of the three plants was completed between the early 1900s (Plant 2) and the 1930s (Plant 3), and operations were focused on various aspects of automobile assembly and manufacturing. Plants 2 and 3 are located in Lansing Township and Plant 6 is located within the City of Lansing. The *Current Conditions Report* prepared by ARCADIS (2008) provides a detailed summary of the site history and operations.

Decommissioning of the plants began in 2007. As of the date of this report, the site buildings have been demolished and all three Plants are secured with fencing and locked gates. Concrete slabs and asphalt parking lots remain in place across much of Plants 2 and 3. Demolition activities conducted through 2012 removed much of the concrete slabs at Plant 6 and the crushed concrete was used as fill material across all three plants.

1.2 Summary of Hydrogeologic Setting

The following provides a brief description of the site hydrogeologic setting for reference. Additional details, including cross-sections and output from a three-dimensional model, are available as part of the RFI Phase 2 Report (ARCADIS 2013a).

The Grand River is incised into the regional topography and wraps around the Site to the south, east, and north. Surface elevations for the Site range from approximately 855 to 875 feet above mean sea level (ft msl). The elevation of the Grand River is approximately 830 ft msl and known to lose water to the bedrock aquifer in the Lansing area.

The geology of the Site is complex, consisting of an interbedded series of glacially derived sediments. For discussion purposes, the geology of the Site is divided into six general hydrostratigraphic units (from shallow to deep):

- Shallow fill – Typically 1 to 10 feet thick consisting of sand and gravel mixes brought to the Site as part of construction activities. The shallow fill occasionally contains shallow perched water when present above a clay layer.

- Interbedded zone – Typically interbedded soft clay, glacial tills, and isolated lenses of silt and sand. Sand and silt lenses are typically saturated, forming thin discontinuous zones of perched groundwater. This unit is primarily encountered on Plants 2 and 6 and the southern portion of Plant 3. Saturated soils within the shallow fill and interbedded zone are generally referred to as the "perched water" or collectively as the "perched zone."

- Glacial till – A compact, dense, and mostly dry silt/sand/gravel/clay mix that creates a vertical barrier to groundwater flow and separates the perched water above from the deep aquifer. Occasionally contains layers of saturated sand, especially in the central portion of Plant 6.

- Deep overburden – Consists of a mix of sand layers and sand-silt-clay till located above the bedrock. The deep overburden is dry beneath the glacial till but becomes saturated where encountered deeper than 65 to 70 ft bgs. Saturated deep overburden is only observed at Plant 3 where a southwest-northeast trending bedrock valley dips below the regional water table.

- Weathered bedrock – The transition from glacial overburden to consolidated rock is gradational with a weathered bedrock layer typically ranging from 5 to 20 feet thick. The weathered bedrock zone, especially the weathered sandstone portion, is a preferential pathway for groundwater flow. Weathered bedrock is typically encountered between 60 to 75 ft bgs, except in the bedrock valley located across the northwestern portion of Plant 3, where bedrock can be encountered at depths greater than 100 ft bgs.

- Bedrock – Consists of the Grand River and Saginaw Formations. The Grand River Formation is a fine to medium-grained sandstone that occupies erosional valleys within the Saginaw Formation (United Stated Geological Survey and National Parks Service 2000). Beneath the Site, the Saginaw Formation consists primarily of fine-grained sandstone with thin lenses of shale of varying thickness. More significant layers of shale are encountered within the Saginaw Formation that can be up to 15 feet thick. Groundwater within the deep overburden, weathered bedrock, and bedrock zones are referred to separately, or collectively as the "deep aquifer."

2. Summary of RFI Supplemental Phase 2 Activities

The overall objective of the RFI supplemental activities was to close the data gaps identified by the RFI Phase 2 Report. Appendix A includes an updated version of the RFI "Matrix" table summarizing the results of the RFI for each investigation area identified by the *RFI Work Plan, Phase 2* (ARCADIS 2012a) and includes potential corrective measures for each area proposed as part of the draft Corrective Measures Study (CMS) submitted to the MDEQ in June 2013 (ARCADIS 2013b). The locations of each investigation, as well as the locations of all soil borings and monitoring wells installed as part of the 2013 RFI supplemental activities, are shown on Figures 2 and 3. Soil boring logs for additional soil borings and monitoring wells installed as part of the 2013 supplemental activities are included as Appendix B on the attached disc.

2.1 Investigation of Lower 1,4-Dioxane Plume in Groundwater

One of the primary data gaps identified during the RFI Phase 2 activities was the lateral and vertical extent of 1,4-dioxane in groundwater within the deep overburden at Plant 3. The impact was detected at monitoring well MW-12-21, which was installed at the request of the MDEQ to provide vertical delineation of perched water impacts identified in Area 11. Prior efforts to collect vertical aquifer profile (VAP) samples from the deep overburden at this location using a temporary well assembly were not successful due to the low permeability of the deep overburden at this location (primarily silt). Well MW-12-21 was installed at a depth of 70 to 75 ft bgs. The water in the well is typically turbid during sampling and goes dry at very low pumping rates; however, laboratory results indicate 1,4-dioxane present at concentrations of up to 510 micrograms per liter (µg/L) (June 2013). This result indicates that groundwater impacts have migrated downward at this location from the perched zone, through the vadose zone that separates the perched water from the deep aquifer, to the deep overburden at this location.

Area 11 is located south of the area known as the "coliseum." The coliseum is a subfloor of the former Plant 3 structure that is constructed to a depth of 15 to 20 feet below grade, formerly used to house equipment for stamping automobile parts (buildings 304 and 305 press pit operations). Upon demolition of the Plant 3 building, the subfloor was exposed and is currently an approximately 3-acre, 15- to 20-foot-deep pit that traps surface runoff and precipitation. To prevent excessive ponding, holes were punched through the floor during demolition to allow the coliseum to drain. Based on the depth of the coliseum, the known depth of the glacial till confining layer in the area, and the result of soil borings completed through the floor of the coliseum, the

construction of the subfloor cut away the glacial till confining layer. The result is that this breach in the till allows vertical migration of groundwater impacts from the perched zone to the deep aquifer and also promotes deep aquifer recharge that results in radial groundwater flow away from the area. A cross-section illustrating the geology and groundwater impacts for Area 11 is included as Figure 4. Boring logs (including well construction details) for VAP borings and monitoring wells completed as part of the lower 1,4-dioxane investigation are included in Appendix B (attached disc).

2.1.1 Summary of Activities Completed

Several rounds of investigation were completed to delineate the extent of the 1,4-dioxane beneath and downgradient from the coliseum. The scope of work was completed between March and December 2013 and included: 41 deep vertical aquifer profile borings, installation of 24 deep monitoring wells (20 in deep overburden/weathered bedrock, four in bedrock), collection of groundwater samples from new and existing wells in the area of impact, sampling of two nearby municipal wells for 1,4-dioxane, and hydraulic testing of the deep overburden and bedrock wells installed along the 1,4-dioxane plume.

The following provides a general timeline for the investigation completed during three separate mobilizations. Each successive scope of work was developed with the approval of MDEQ.

March-April 2013

The initial scope of work was outlined in the 2013 Budget Amendment 1 submitted to the MDEQ on February 28, 2013 and approved by the MDEQ on March 1, 2013. The goal of the initial scope was to complete VAP sampling and monitoring well installation to delineate the 1,4-dioxane impacts both vertically and horizontally around the apparent “source area” at MW-12-21. A deeper monitoring well (MW-13-22) was installed adjacent to MW-12-21 to delineate the impacts vertically, and VAP sampling and monitoring wells were completed on an approximately 200-foot grid surrounding MW-12-21 (MW-13-23 through MW-13-26).

At each location, the boring was advanced via sonic drilling methods to the top of bedrock or weathered bedrock zone. Drilling water was not used during drilling to limit issues associated with sample dilution. A temporary well assembly was lowered down the sonic casing and used to collect a groundwater sample at the bedrock interface, and then a permanent monitoring well was set at a shallower depth, generally

consistent with the depth of MW-12-21 (70 to 80 ft bgs). Groundwater samples were submitted to Merit Laboratories in Lansing, Michigan, on a 24-hour turnaround time and the results of each boring were used to help guide the completion of additional borings. Groundwater samples were submitted for analysis of 1,4-dioxane (Method 8260 SIM), as well as volatile organic compounds (VOCs) using U.S. Environmental Protection Agency (USEPA) Method 8260. In addition, groundwater samples collected during this initial phase of work were submitted for analysis of semi volatile organic compounds (SVOCs) utilizing USEPA Method 8270 and metals using USEPA Method 6020.

The initial results of the investigation suggested the 1,4-dioxane impacts extended away from the source area to the east. In addition, the deep monitoring well MW-13-22 (installed adjacent to the MW-12-21 source area well) indicated 1,4-dioxane was present in sand immediately above bedrock (likely weathered sandstone). As a result, a bedrock well was installed in the source area (MW-13-28) and several contingency borings were completed to the east and south of the source area (MW-13-27 through MW-13-30). Sampling of the bedrock well did not indicate 1,4-dioxane above the method detection limit. The contingency wells to the east and south of the source area suggested a groundwater plume extending to the southeast through MW-13-29 (Figure 3).

July-August 2013

The scope of work for the next phase of the investigation was outlined in an email to the MDEQ on May 2, 2013, and subsequently approved by the MDEQ via email on May 13, 2013. Based on the results of the first phase of the investigation, the 200-foot sampling grid was extended to the south and east of the source area toward Saginaw Avenue and Plant 2. The scope of work was modified based on the lessons learned during the first phase; specifically, based on the permeability of the deep overburden (outside of the silty source area) and weathered bedrock zone, VAP sampling was used to delineate the downgradient portion of the 1,4-dioxane plume. Groundwater samples during this phase were submitted for analysis of VOCs and 1,4-dioxane (8260 SIM).

Each boring was advanced via sonic methods to the deep aquifer water table. Drilling water was not used during drilling in order to limit issues associated with sample dilution. If groundwater was encountered within the deep overburden (primarily on Plant 3), a VAP sample was collected before advancing the boring to the weathered bedrock zone. Once a VAP sample was collected from the weathered bedrock, the

boring was abandoned by grouting the boring via tremie line from the bottom up while systematically removing the outer 6-inch sonic casing.

Groundwater samples were submitted to Merit Laboratories on a 24-hour turnaround. The proposed grid was adapted based on the laboratory results. During this phase of the lower 1,4-dioxane investigation, the 1,4-dioxane impacts were tracked to the southeast of the coliseum, across Saginaw Avenue and south on Plant 2 to the transect consisting of borings VAP-P2-MI62, VAP-P2-MH82, and VAP-P2-MI101, at which point the drilling was paused and the data were presented to the MDEQ.

October-November 2013

The third scope of work for the 1,4-dioxane investigation was outlined as part of the 2013 Budget Amendment 3 submitted to the MDEQ on September 1, 2013. Further details regarding the proposed work were provided to the MDEQ via email on September 25, 2013. The scope of work was approved by the MDEQ via email on October 1, 2013 with the caveat that borings advanced through areas of known perched zone impacts (Plant 2) use double-cased drilling methods to limit the potential for cross contamination. The proposed scope of work consisted of additional VAP sampling transects on Plants 2 and 6 and installation of a monitoring network upon delineation of the plume.

Due to the presence of the LNAPL plume and associated perched zone 1,4-dioxane impacts in the shallow fill and interbedded zone located in the central portion of Plant 2, the sampling grid was resumed approximately 600 feet south-southeast of the last transect completed during the second scope of work. As agreed with the MDEQ, sonic borings completed in areas of known perched water impacts were advanced using a double-cased drilling method. A 7-inch casing was advanced to the glacial till confining layer and then the 6-inch casing was advanced out of the 7-inch casing to the final depth of the borehole. This drilling method effectively sealed off the perched water impacts from the deeper portion of the borehole, reducing the chances of cross-contamination. Similar to the previous phases of the investigation, drilling water was not used during drilling. VAP sampling was used to collect groundwater samples from the deep overburden (if encountered) and from the weathered bedrock zone.

Three VAP transects were completed as part of the third scope of work. Beginning south of the LNAPL plume, the first transect identified 1,4-dioxane at boring VAP-P2-OS100 at a concentration of 196 µg/L within the weathered bedrock. Based on this result, a second VAP transect was completed 400 feet downgradient on Plant 6. This

transect did not identify impacts within the weathered bedrock zone. The third transect (VAP borings VAP-P2-PV76, PV101, and PU122) was completed on Plant 2 between the first and second transects to further refine the horizontal delineation and verify the plume was not turning. On the third transect, in addition to samples collected from the weathered bedrock zone, VAP samples were collected from deeper bedrock 15 to 20 feet below the weathered zone to verify the 1,4-dioxane was not migrating vertically into a deeper zone. Although several VOCs, including benzene, toluene, ethylbenzene, xylenes (BTEX), MEK, and acetone, were identified in samples collected from the third transect (discussed further below), 1,4-dioxane was not detected.

Monitoring wells were installed on three transects (southern Plant 3, north-central Plant 2, and western Plant 6) to provide permanent monitoring locations. The Plant 6 wells were placed to provide a downgradient clean monitoring location. Within each monitoring well transect, the central well location includes nested wells consisting of deep overburden (if present, Plant 3 only), weathered bedrock, and bedrock wells.

2.1.2 Horizontal and Vertical Extent of Lower 1,4-dioxane Plume

The horizontal and vertical extents of the lower 1,4-dioxane plume have been defined at the Site. Figure 5 shows the horizontal extent of the 1,4-dioxane based on the maximum concentrations detected at each sampling location. Annotated maps illustrating the distribution of 1,4-dioxane and other VOCs detected during the investigation are provided as Figures 6 and 7, and a cross-section depicting the vertical extent of lower 1,4-dioxane plume is included as Figure 8. Laboratory analytical data for groundwater samples collected during VAP sampling are summarized in Table 2. Groundwater samples collected from monitoring wells are summarized in Table 3. Laboratory analytical reports are provided as Appendix C on the attached disc.

As shown on Figure 5, the extent of 1,4-dioxane associated with the source area at Area 11 extends away from the coliseum to the southeast, across Saginaw Avenue to the south-central portion of Plant 2. The plume has been delineated horizontally by VAP borings and with monitoring wells installed at transects along the plume for long term monitoring purposes. The total length of the plume is approximately 2,400 feet. The concentration of 1,4-dioxane at the source area well (MW-12-21) is approximately 500 µg/L. The highest concentrations of 1,4-dioxane within the downgradient plume appear concentrated within a central core typically 50 to 100 feet wide with detected concentrations typically ranging from 100 to 200 µg/L. The highest concentration along the core was observed at MW-13-43 at 220 µg/L. The southernmost boring where 1,4-dioxane was observed (VAP-P2-OS100) had a concentration of 196 µg/L indicating

that little attenuation has occurred along the length of the plume. The long and thin morphology of the plume, coupled with the lack of 1,4-dioxane attenuation, suggests a relatively rapid plume migration rate. The concentration at the toe of the plume indicates the plume is likely still migrating to the south. The hydraulic testing and groundwater velocity estimates are summarized below in Section 2.1.4.

It is possible that 1,4-dioxane within the perched zone at Plant 2 leaks downward through the glacial till confining layer and contributes to the lower 1,4-dioxane plume. However, based on the distribution of the lower 1,4-dioxane - characterized in detail with VAP borings and monitoring wells as indicated on Figures 6 and 7 - leakage downward from the perched zone would have to occur such that the resulting contributions are exactly coincidental with the mapped lower 1,4-dioxane plume.

To date, 1,4-dioxane was not been detected at any of the five bedrock wells installed along the plume axis (north to south: MW-13-28, MW-13-47, MW-13-44, MW-12-05, and MW-13-50. The extent of 1,4-dioxane is therefore delineated vertically (Figure 8) and does not migrate within consolidated bedrock or currently threaten off-site bedrock municipal water supply wells.

Two municipal wells were sampled as part of the RFI supplemental activities. These included a Lansing Township well (TWP #4) located 500 feet west of the coliseum area, and a BWL well (BWL 10-10) located northeast of Plant 3. Neither well indicated the presence of 1,4-dioxane. Additional detail regarding the municipal well sampling is provided in Section 2.5.1.

2.1.2.1 Other Constituents of Concern - VOCs

As indicated on Figures 6 and 7, several other VOCs are detected sporadically along the lower 1,4-dioxane plume, primarily in samples collected from the weathered bedrock zone. These include BTEX, acetone, and MEK (aka “other VOCs”). The most notable detections for these VOCs were found at VAP borings or monitoring wells located along the northeastern edge of the lower 1,4-dioxane plume (MW-13-49 and VAP-P2-JU88), within the central portion of the plume (VAP-P2-KH71 and VAP-P2-MI101), and at the southern toe of the plume (VAP-P2-OS100, VAP-P2-OS120, and VAP-P2-PV101). Benzene exceeds the DW Criterion (5 µg/L) at several of these locations with concentrations up to 130 µg/L detected at VAP-P2-MI101. Acetone also exceeds DW Criterion (760 µg/L) at two locations with concentrations of 770 µg/L at VAP-P2-MI101, and 1,730 µg/L at VAP-P2-PV101 located at the toe of the lower 1,4-dioxane plume. A map illustrating the distribution of benzene and acetone relative to

the 1,4-dioxane plume is included in Appendix D. With the exception of low concentrations of acetone and toluene, benzene and other VOCs (MEK, ethylbenzene, and xylenes) have not been observed at monitoring wells located around the coliseum source area.

To determine the source of other VOCs within the 1,4-dioxane plume, ARCADIS completed a review of the available site information. Areas of Interest (AOIs) introduced as part of the *Current Conditions Report* (ARCADIS 2008) were reviewed in detail, as were historical aerial photos and Sanborn Fire Insurance maps to determine if there are any potential source areas that were not investigated as part of the RFI activities. An annotated map summarizing the source area review is included in Appendix D. Other than AOIs previously investigated as part of the RFI, the review did not suggest a potential source area for these other VOCs in the vicinity of the lower 1,4-dioxane plume.

In addition to reviewing the historical site use, Appendix D includes maps summarizing all detections of the other VOCs identified within the perched zone during the previous RFI activities. Benzene and acetone are the only other VOCs that exceed criteria in the vicinity of the lower 1,4-dioxane plume. Toluene, ethylbenzene, and xylenes are generally co-located with benzene where encountered. Review of the RFI data indicates the following regarding benzene and acetone:

- Benzene: Benzene was detected in two areas within the perched zone near the lower 1,4-dioxane plume: Plant 2 at Area 2 and Area 5-2. Benzene has not been detected in the perched zone near the coliseum. In Area 2, benzene has been detected in soil at a concentration of up to 15,300 micrograms per kilogram (µg/Kg) at a depth of 17 to 18 ft bgs, and in groundwater at a concentration of up to 840 µg/L at a depth of 10 to 14 ft bgs. In Area 5-2, in the vicinity of the Plant 2 LNAPL plume, benzene has been detected at several locations in groundwater, but at low concentrations ranging from 0.4 to1.3 µg/L. Benzene was not detected in soil near the Plant 2 LNAPL. The Plant 2 LNAPL has been characterized as cutting oil with elevated concentrations of chlorinated volatile organic compounds (CVOCs) and polychlorinated biphenyls (PCBs) and is not considered a significant source of BTEX.

- Acetone: Acetone has been detected in the perched zone in the central portion of Plant 2. Acetone has been detected at concentrations up to 330 µg/L in groundwater and up to 150,000 µg/Kg in soil at a location west of the LNAPL area

in Area 5-2. Acetone was not detected in the perched zone near the coliseum at Plant 3.

With the exception of acetone, the distribution of perched water COCs in the vicinity of the lower 1,4-dioxane plume is limited. The distribution of benzene impacts in particular does not support the distribution of benzene identified within the lower 1,4-dioxane plume. For example, although Area 2 is in the vicinity of the lower plume toe, it is difficult to reconcile this potential source area with deep aquifer impacts identified on the northern portion of Plant 2 and southern Plant 3.

The nature of the benzene and other VOCs in the vicinity of the lower 1,4-dioxane plume appears to be sporadic. For example, although benzene was not detected in boring VAP-P3-IS88, north of Saginaw Avenue, benzene (along with other VOCs) was detected in the monitoring well installed immediately adjacent to this location (MW-13-49) at a concentration of 14 µg/L. Conversely, although benzene and acetone were detected at boring VAP-P2-MI101 at a concentration 130 and 770 µg/L (respectively), it was not detected at monitoring wells installed at similar depths to the east and west. In addition, based on the surrounding VAP data, there does not appear to be a clear association between the benzene impacts identified near Saginaw Avenue and those observed at VAP-P2-MI101 on Plant 2.

It is possible that leakage from the overlying perched zone in the central portion of Plant 2 may contribute impacts such as acetone to the lower 1,4-dioxane plume. However, there is no obvious source of benzene within the perched zone except in Area 2 as outlined above. The general coincident nature of benzene with the lower 1,4-dioxane plume suggests a source area near the coliseum or southern portion of Plant 3. However, benzene is not observed within the coliseum area monitoring wells, indicating either an older release that has since attenuated, or a separate source area (and vertical pathway) not observed during previous RFI activities.

Benzene and acetone within the weathered bedrock are defined to DW Criteria except for benzene to the east near Saginaw Avenue at Monitoring Well MW-13-49. Confirmatory sampling results are pending; if results are below criteria, no additional investigation is warranted. If results exceed criteria, a step out monitoring well location will be considered east of this location. Because the benzene and acetone impacts are co-located with the 1,4-dioxane, the CMS strategy for mitigation of 1,4-dioxane will also address benzene and acetone.

2.1.2.2 Other Constituents of Concern - Metals

Groundwater samples collected during the initial phase of the lower 1,4-dioxane investigation and from deep overburden and weathered bedrock wells installed near the 1,4-dioxane plume indicate generally sporadic concentrations of metals above DW Criteria. Groundwater sampling results are summarized on Tables 2 and 3. Note that although some of the metals results exceed GSI Criteria, GSI is not a complete exposure pathway for groundwater located within the deep aquifer.

Iron and manganese within these samples are consistently elevated and frequently above aesthetic or health-based DW Criteria. Elevated concentrations of these metals can be indicative of anaerobic reducing conditions within the aquifer, conducive to the mobilization of metals from the native aquifer material. This is particularly relevant for arsenic, but also other metals that are bound to iron minerals including copper, cobalt, nickel, lead, vanadium and zinc, which may become mobilized, along with iron, under reducing conditions in the aquifer. Aside from iron and manganese, concentrations of metals greater than DW Criteria are sporadic and inconsistent, both spatially and temporarily, suggesting that exceedances may be due to environmental factors, such as elevated turbidity or slight shifts in the geochemical environmental towards conditions where iron and other metals are more soluble. A complete geochemical conceptual site model will be developed in April 2014 to demonstrate how geochemical conditions may contribute to low-level metals exceedances in the deep aquifer

2.1.3 Hydrogeology of Lower 1,4-Dioxane Plume

As outlined above, the 1,4-dioxane plume was mapped with numerous VAP borings and monitoring wells. The plume was mapped from the suspected source area and tracked to the southeast using an adaptive sampling grid. Based on the distribution of impacts observed during the investigation, the lower 1,4-dioxane migrates from the source area at the coliseum to the southwest. Groundwater elevation measurements collected from the deep monitoring wells installed along the 1,4-dioxane plume reflect a complex heterogeneous aquifer structure. Similar to the perched zone discussed in the RFI Phase 2 Report, the specific depth of a monitoring well plays a large role in the hydraulic head observed at a given location. Large vertical gradients occur in formations with vertical anisotropy and indicate a lack of vertical groundwater communication. Monitoring wells within the deep aquifer at the Site were installed based on COC distribution. Due to large vertical gradients between the deep overburden, weathered bedrock, and bedrock zones, the observed groundwater elevation is variable depending on the specific depth of a well.

Three groundwater elevation contour maps were prepared for the Site: deep overburden (Figure 9) utilizing the deep aquifer water table wells installed around the coliseum source area, weathered bedrock (Figure 10) utilizing wells installed within the weathered bedrock zone, and bedrock (Figure 11) consisting of a site-wide map utilizing all of the bedrock wells. A summary of December 2013 groundwater elevation measured within deep wells is included as Table 4.

Review of Figure 9 indicates the presence of a groundwater mound beneath the coliseum (i.e., recharge zone) with radial groundwater flow away from the area. The 1,4-dioxane migrates away from the source area within the deep overburden (and weathered bedrock) toward Saginaw Avenue. As shown on the cross-sections (Figures 4 and 8), the deep overburden is separated from the weathered bedrock by a layer of glacial till. Groundwater elevation within the deep overburden can be as much as 10 feet higher than within the weathered bedrock zone (e.g., MW-13-48 / MW-13-34). The strong vertical gradient between the deep overburden and weathered bedrock is indicative of the hydraulic separation between the units. A summary of the vertical gradient measured in deep overburden/weathered rock nested wells is included as Table 5.

South of Saginaw Avenue, the bedrock surface rises above the regional water table and the groundwater transport transitions solely to within the weathered bedrock zone. The weathered bedrock zone varies in thickness generally between 5 and 20 feet and marks a transition to more consolidated rock. The hydraulic conductivity of the weathered bedrock zone can vary several orders of magnitude as outlined below in Section 2.1.4. Similar to the shallow perched zone described as part of the RFI Phase 2 Report, a groundwater contour map utilizing wells set within this transition zone (Figure 10) is difficult to interpret because wells set at similar depths along the same transect (perpendicular to the plume and assumed groundwater flow direction) can vary by 6 feet or more due to the heterogeneity of the zone. The horizontal gradient depicted by the weathered bedrock contours suggests groundwater flow from the source area to the southeast, as generally expected, but also from the toe of the plume to the north, meeting somewhere on the northern portion of Plant 2. As this is unlikely, the result suggests that groundwater elevations within this zone are strongly influenced by changes in hydraulic conductivity and vertical gradient at a local scale. The actual migration of 1,4-dioxane within the weathered bedrock is controlled by the permeability structure of the zone, as well as the *effective head*, or "corrected" groundwater elevation, described below for the bedrock aquifer.

For the bedrock aquifer, the effective head can be calculated based on the observed vertical gradients. As indicated in Table 5, the vertical gradient tends to be limited near the coliseum and increases to the south to a maximum of 0.47 foot per foot (ft/ft) downward at wells MW-13-52 / MW-13-50 located on Plant 6. This variation in vertical gradient appears to coincide with bedrock formation. Near the coliseum, where the bedrock encountered consists of the more uniform and permeable Grand River Formation, the vertical gradient is negligible. To the south within the interbedded sandstone and shale of the Saginaw Formation, the gradient is strongly downward. Review of the bedrock wells and other deep boring logs suggests an approximate geologic contact between the Grand River and Saginaw Formations oriented roughly southwest-northeast. The location of the geologic contact is included on Figure 11.

To calculate the effective head for the bedrock aquifer (Figure 11), an average downward gradient 0.4 ft/ft was applied to bedrock monitoring wells installed within the Saginaw Formation, as follows:

Effective GW Elevation:

$GW_{eff} = GW – (dh/dl * \Delta Elev)$, where

GW = measured groundwater elevation
dh/dl = vertical gradient
ΔElev = change in elevation between deepest well and measured well

As shown on Figure 11, the corrected bedrock groundwater contours are a good match for the distribution of the lower 1,4-dioxane plume located within the weathered bedrock zone. An effective head map specifically for the weathered bedrock zone is difficult to calculate because the limited number of the weathered bedrock wells and relative heterogeneity of the zone limit the use of a specific correction factor. However, the distribution of 1,4-dioxane within the weathered bedrock is consistent with a groundwater flow from north to south.

Additional characterization, including direct measurements of flow direction, will be completed prior to the final Corrective Measures Study that will be submitted in June 2014.

2.1.4 Hydraulic Conductivity and Groundwater Velocity

The hydraulic conductivity (K) of the three deep hydrostratigraphic units has been estimated in two ways: through slug testing completed in December 2013, and through specific capacity measurements collected during monitoring well development. A summary of the slug testing results is provided as Table 6. The specific capacity data are summarized in Table 7.

Slug tests were completed using a solid slug lowered into the well. A pressure transducer recorded both the slug-in and slug-out aquifer response at high frequency. Slug test response was analyzed utilizing the Aqtesolv Pro analysis software package (HydroSOLVE, Inc. v4.5), primarily utilizing the Bouwer and Rice (1976) and the KGS (Hyder et al. 1994) methods. Aqtesolv model output for each solution is included as Appendix E on the attached disc.

Specific capacity is a measure of how much water a well can produce (Q) relative to the steady state drawdown (s) observed during pumping. Specific capacity is typically given in gallons per minute per foot of drawdown (gpm/ft). The specific capacity can be converted to aquifer transmissivity (T) utilizing the following empirical relationship derived by Driscoll (1986):

Unconfined aquifer: $T = Q/s * 1,500$

Confined aquifer: $T=Q/s * 2,000$

The K for the specific capacity test is given by T divided by the thickness of the aquifer (b). Only wells that indicated a stable (steady state) drawdown condition during pumping were used for the specific capacity analysis. In general, there is good agreement between the results of the specific capacity testing and the slug testing, and the following discussion uses the results interchangeably. A comparison of wells with hydraulic conductivity derived from both specific capacity and slug testing is provided as Table 8.

In general, the hydraulic testing at the Site indicates several orders of magnitude variation in hydraulic conductivity. Results of the hydraulic testing indicate the following:

- Deep overburden: The K of the silt formation near the source area (MW-12-21) is 0.02 foot per day (ft/day). With the downgradient sandier portion of the deep overburden, the K ranges between 7 and 60 ft/day.

- Weathered Bedrock: The weathered bedrock wells have a wide range of K ranging from 0.2 to 50 ft/day.

- Bedrock: In general, the bulk K measured in wells installed in the Saginaw Formation is on the order of 0.1 ft/day. Wells installed within the Grand River Formation have a bulk K on the order of 1 ft/day. The bedrock K can be significantly higher if fracturing is encountered. For example, MW-12-02, noted with numerous fractures, has a measured K of 78 ft/day.

Groundwater velocity within the plume can be difficult to determine due to the variable horizontal gradient outlined above. Based on assumptions including an overall range in hydraulic conductivity of 0.02 ft/day to 60 ft/day, an assumed effective porosity of 10%, and a variable horizontal gradient that ranges from 0.001 to 0.01 ft/ft, the resulting range of groundwater velocity within the lower 1,4-dioxane plume is between 1 to 2,200 feet per year (ft/yr). A reasonable upper-end estimate for groundwater velocity of approximately 300 to 400 ft/yr can be assumed based on the hypothesis that the lower 1,4-dioxane plume was mobilized following the demolition of Plant 3 in 2007.

Additional characterization of groundwater velocity and flow direction will be completed prior to the final Corrective Measures Study submittal in June 2014. Passive Flux Meters (PFMs, EnviroFlux, Inc.) will be used to provide a direct measurement of groundwater velocity and estimate groundwater flow direction. This information will provide an additional line of evidence to verify the conceptual site model and can be used to help assess the risk of further plume migration.

2.1.5 Hydraulic Communication with Municipal Wells

Absolute pressure transducers were deployed at the Site for a week in October 2012 to assess the connection between the bedrock wells at the Site, municipal pumping, and the shallow perched water. At that time, a bedrock pumping test was being contemplated to demonstrate hydraulic separation of the bedrock aquifer and perched water. The data can be used to evaluate the influence of municipal well pumping on shallow weathered bedrock at the Site. The results of the transducer study were originally provided to the MDEQ as part of the *Bedrock Pumping Test Work Plan,* dated November 15, 2012 (ARCADIS 2012b). The complete memorandum describing the

data, post-processing, and results, including water level graphs, is provided as Appendix F.

Transducers were set at Plant 2 in bedrock wells MW-12-05 and MW-12-06, and shallow overburden wells P2-SB-06 and P2-SB-20, and recorded ambient water level data for one week. The corrected water level data for well MW-12-05 has a slightly increasing trend during the period of record (possibly due to instrument drift) and does not show response to precipitation events. Corrected water levels for MW-12-06 are flat, indicating no changes in aquifer water level during the period of record. Neither MW-12-05 nor MW-12-06 displayed a characteristic drawdown response related to municipal pumping for the period of record. The Lansing BWL has indicated that the pumping periods for individual wells are not recorded in an easily queried format. It is therefore unclear which municipal water wells were operating during the period of record. However, several of the Lansing Township wells are located relatively close to the Site, including well TWP #4 located within 500 feet of the Plant 3 property boundary (1,000 feet from the 1,4-dioxane source area), and are assumed to have been operating periodically during the study. In addition to a lack of hydraulic response to municipal pumping observed at the Site, the distribution of 1,4-dioxane in the deep aquifer and orientation of the plume does not appear to be influenced by the municipal pumping.

The results of the transducer study suggest that regional pumping does not strongly affect the shallow bedrock beneath the Site. Well MW-12-05 and MW-12-06 are located within the Saginaw Formation beneath the lower 1,4-dioxane plume. The result further demonstrates the vertical anisotropy of the Saginaw Formation and suggests limited to no hydraulic connection between regional pumping wells and the lower 1,4-dioxane plume on Plant 2.

Additional characterization of the bedrock water levels will be completed prior to the June 2014 CMS submittal. Pressure transducers will be placed in bedrock wells along the axis of the lower 1,4-dioxane plume, including wells installed within the Grand River Formation located near the 1,4-dioxane source area and Lansing Township well TWP #4. These additional data will be used to further evaluate the potential hydraulic connection between the shallow bedrock at the Site and the municipal water supply wells.

2.2 Metals

Additional investigation was completed to characterize metals in soil and groundwater in several areas of the Site, including:

- Northern Plant 3 – historical arsenic in soil at the property boundary
- Plant 3, Area 16 – metals in soil and groundwater at the property boundary
- Plant 6, Area 5-8 – metals in groundwater near the property boundary
- Plant 6, Area 7 – off-site metals in groundwater
- Plant 6 – metals in bedrock wells MW-04-04 and MW-04-06

There are several areas at the Site where metals in perched water marginally exceed the Groundwater Surface Water Interface (GSI) and/or DW Criteria near to the property boundary. Additional confirmatory samples have been collected in Areas 7 and 16 and the concentrations have generally remained consistent (Area 7) or indicated only sporadic groundwater exceedances (Area 16). Confirmatory samples in Area 5-8 (MW-13-36R) are pending. Even though there are exceedances of criteria, these results do not suggest there is concern under current conditions. Perched groundwater in these locations is not used as a drinking water resource and unlikely to be used for drinking water in the future. Existing or potential off-site exceedances for metals will be addressed as part of the CMS.

The general scope of work for additional metals sampling was outlined within the budget amendment request (Budget Amendment 2, 2013) provided to and subsequently approved by the MDEQ on July 1, 2013. A brief outline of each scope of work is provided below.

The soil sampling analytical results for each area are provided in Table 9, and groundwater analytical results collected from the new monitoring wells are included in Table 3. The laboratory analytical reports for each sample are provided as Appendix C on the attached disc.

2.2.1 Northern Plant 3 - Historical Arsenic in Soil

Historical soil sampling activities completed in the northern portion of Plant 3 during the late 1980s identified arsenic in soil at concentrations above the Groundwater-Surface Water Protection (GSIP) Criteria and the DWP Criteria (4.6 milligrams per kilogram [mg/Kg] for both). The Statewide Default Background (SBG) Criterion for arsenic is 5.8 mg/Kg. The historical arsenic exceedances generally ranged from 6 to 12 mg/Kg. Based on these results, four soil borings were completed in July 2013 at key historical boring locations near the Plant 3 property boundary to verify the historical results. Soil samples at each location were collected at intervals consistent with historical sampling. The location of the historical and 2013 soil boring locations, as well as the sampling results, are summarized on Figure 12.

The four soil borings, SB-P3-BL78, SB-P3-CE80, SB-P3-DM76, and SB-P3-CN180, were advanced adjacent to historical borings 10, 11, 12, and 42, respectively. Sample depth intervals at each boring were selected to be generally consistent with the corresponding historical sampling depth intervals. Samples were submitted to Merit Laboratories for analysis of arsenic.

All of the verification samples collected at the four boring locations were below Part 201 Criteria for arsenic. Arsenic in soil is therefore defined at the property boundary and no further investigation is required.

2.2.2 Plant 3, Area 16 - Extent of metals in soil/groundwater

During the RFI Phase 2, arsenic was detected in soil above DWP Criteria at the southeastern perimeter of Area 16, and in groundwater samples collected from VAP borings at concentrations above the DW Criteria (SB-A16-HU178 and SB-A16-IE168). The extent of arsenic in groundwater southeast of Area 16 was not defined to Part 201 Criteria between Area 16 and the Plant 3 property boundary. Figure 13 provides a summary of the metals detected above the DW / DWP Criteria in Area 16. Additional work was completed in this area to define metals in soil and groundwater, including soil sampling at two soil boring locations near the property boundary, installation of three monitoring wells, and collection of groundwater samples for metals and other site COCs.

2.2.2.1 Soil Results

Additional work was completed in this area in July 2013 to define arsenic and other metals in soil. Soil samples were collected from two soil borings (SB-A16-HU181 and SB-A16-IL168) advanced along the eastern and southern Plant 3 property boundaries and submitted to Merit Laboratories for Target Analyte List (TAL) metals analysis. Although several metals in this area also exceed the GSI/GSIP Criteria, these results are not included on Figure 13 as storm sewers are not present and the GSI pathway is not complete for this area (see additional discussion on GSI in Section 2.4).

As shown on Figure 13, several metals (arsenic, manganese, and lead) still exceed DWP Criteria at the eastern Plant 3 property boundary at SB-A16-HU181. Arsenic was detected at concentrations of 9.1 and 16.7 mg/Kg, in excess of the SBG of 5.8 mg/Kg and the DWP Criterion of 4.6 mg/Kg. Manganese was detected at concentrations slightly in excess of the SBG of 440 mg/Kg. In addition to the DWP Criteria, lead exceeds the Non-Residential Direct Contact (DC) Criteria (900 mg/Kg) at a depth of 4 to 5 ft bgs with a concentration of 1,250 mg/Kg. However, the adjacent property is a 200 ft wide rail yard easement and the owner has refused to allow access for additional sampling. As discussed below, groundwater samples collected from this location do not exceed Part 201 Criteria for lead and arsenic; however, they do exceed DW Criteria for nickel and manganese.

The corrective measure proposed for this area includes maintaining an exposure barrier and placing a deed restriction on the area restricting the excavation and handling of impacted soils. Due to restricted access, the width of the railroad easement (~200 feet), and ambiguity associated with potential metals impacts associated with the railroad easement, additional off-site sampling east of Area 16 and the railroad easement is not proposed at this time.

2.2.2.2 Groundwater Results

As part of the RFI supplemental activities, three monitoring wells were installed in the area, primarily within the saturated shallow fill material (MW-13-31 and MW-13-32) and shallow interbedded zone (MW-13-33). Groundwater samples collected from the wells were submitted for TAL metals analyses, as well as Target Compound List (TCL) VOCs and SVOCs. As shown on Figure 13, several metals, including lead, manganese, nickel, and vanadium exceed the DW Criteria for total metals in Area 16. Due to the high turbidity of the samples observed during sampling, filtered samples were also collected and submitted for dissolved metals analysis for comparison, where

appropriate. The results for metals sampling indicate only manganese and nickel exceed the DW Criteria at the property boundary. In November 2013, the concentration of nickel at MW-13-32 was 0.241 milligram per liter (mg/L) (DW Criterion: 0.10 mg/L). Review of Table 3 indicates that, in August 2013, nickel did not exceed criteria at MW-13-32.

Review of the total and dissolved metals indicates that exceedances for lead and vanadium in Area 16 appear to be associated with the elevated turbidity of the VAP and monitoring well samples.

As outlined in the RFI Phase 2 Report, background concentrations for manganese appear to be elevated regionally. All of the samples collected for manganese in Area 16 are below the 0.860 mg/L Part 201 Residential Heath Based Drinking Water Value (Health Based Criteria).

Based on the results of the supplemental sampling outlined above, the investigation of Area 16 is considered complete. This conclusion is based on the following:

- Lead in soil exceeds the non-residential DC Criteria at 5 to 10 feet below grade. Any potential exposure risk associated with lead in soil will be managed with an exposure barrier and placing a dead restriction on the area restricting the excavation and handling of impacted soils.

- Off-site sampling beyond the Plant 3 eastern property to further delineate metals in soil is not possible due to a denial of access to the adjacent property.

- In November 2013, with the exception of manganese and nickel, metals in groundwater did not exceed DW Criteria at the property boundary. Dissolved manganese is likely naturally occurring and does not exceed Health Based Criteria. During the August 2013 monitoring event, nickel did not exceed DW Criteria although lead exceeded the DW Criteria due to elevated turbidity.

2.2.3 Plant 6, Area 7 – Offsite Metals

The extent of off-site metals in groundwater, including lead, arsenic, and vanadium, at the Plant 6 southern property boundary were not defined to Part 201 Criteria during the RFI Phase 2 activities. An additional off-site monitoring well was installed south of the Site and additional groundwater samples were collected, both from the new well and the existing wells, to better define metals exceedances in groundwater. The location

and recent groundwater sampling results of the Area 7 monitoring wells are presented on Figure 14.

An additional monitoring well, MW-13-35, was installed south of West Michigan Avenue to better define vanadium exceedances detected in on-site monitoring wells in Area 7. Groundwater samples were collected from monitoring well MW-13-35 and submitted for TAL metals analyses. This monitoring well was sampled during September and November 2013. Together with monitoring wells MW-12-15 and MW-12-16, the three wells provide off-site monitoring locations for metals and other exceedances observed in Area 7 groundwater.

The sampling results for MW-13-35 indicate vanadium at concentrations of 0.008 and 0.005 mg/L (November and December 2013 sampling, respectively), slightly in excess of the DW Criterion of 0.0045 mg/L. Recent results for off-site well MW-12-16 also indicate a concentration of arsenic at 0.015 mg/L, slightly above the DW Criterion of 0.010 mg/L. In addition, manganese concentrations exceed DW Criteria at these locations, but are below the Health Based Criteria. Elevated manganese in groundwater appears to be naturally occurring across the region.

The property to the south of Michigan Avenue is the Lansing Sexton High School athletic field, and additional soil borings are not proposed on that property at this time.

2.2.4 Plant 6, Area 5-8 - Metals in Perched Water

The extent of vanadium in groundwater at the Plant 6 eastern property boundary was not defined to Part 201 Criteria during the RFI Phase 2 activities. An additional monitoring well, MW-13-36R, was installed between P6-SB-35 and the Plant 6 property boundary to further characterize vanadium in groundwater. The location and recent groundwater sampling results from monitoring wells in this area are included on Figure 14.

An additional shallow monitoring well, MW-13-36R, was installed along the eastern border of Plant 6 to better define vanadium exceedances detected at P6-SB-35, located 200 feet from the eastern property boundary. Groundwater samples were collected from monitoring well MW-13-36R and submitted for TAL metals analyses. This monitoring well was sampled in December 2013. The sampling results for MW-13-36R indicate total and dissolved vanadium at a concentration of 0.005 mg/L, slightly in excess of the DW Criterion of 0.0045 mg/L.

Further delineation of metals in groundwater at locations off-site to the east is not proposed at this time.

2.2.5 Plant 6 Bedrock Well Replacement

Metals above MDEQ Part 201 DW Criteria have been detected at Plant 6 in historical bedrock wells MW-04-06 (lead) and MW-04-04 (arsenic, beryllium, total chromium, cobalt, lead, manganese, nickel, and vanadium). In addition, MW-04-06 had historically indicated low levels of vinyl chloride (2 µg/L). As outlined in the RFI Phase 2 Report, it is possible that the historical detections at MW-04-04 and MW-04-06 were related to well construction. Bedrock well MW-04-04 was only sampled once in 2004 and then could not be located during the demolition activities at Plant 6. During recent sampling events, a blockage was encountered in well MW-04-06, suggesting a damaged well riser and possible leakage into the well from outside of the casing. Both of these wells were replaced to verify the results in bedrock. The locations of the replacement wells and the November 2013 groundwater sampling results are included on Figure 15.

An excavator was used to locate MW-04-04 beneath the fill material placed as part of the Plant 6 demolition activities in May 2013; however, the well was found to be dry with a total depth of approximately 44 feet below grade, and assumed to be collapsed. Both MW-04-04 and MW-04-06 were abandoned via over drilling and filling the boreholes with bentonite grout according to general MDEQ guidelines. Well abandonment logs are included in Appendix C on the attached disc.

The replacement wells MW-04-04R and MW-04-06R were installed in July 2013. The monitoring well boreholes were advanced to competent rock using sonic methods, a 4-inch steel casing was installed to the top of rock and cemented in place, and then the rig was converted to rock coring to create an open borehole bedrock well. Boring logs for the replacement wells are also included in Appendix C. At each borehole, a 4-inch-diameter steel casing was installed to approximately 20 feet into competent bedrock similar to the original well construction. Each well includes an open bedrock borehole to a depth of approximately 25 feet below the steel casing.

Both wells were sampled during the August and November 2013 sampling events. In November 2013, arsenic at both locations was detected at 0.021 mg/L, in excess of the DW Criterion (0.010 mg/L). Manganese also exceeds the aesthetic DW Criteria at MW-04-06R, but not the Health Based Criteria of 0.840 mg/L. Other metals did not exceed criteria at either well, and vinyl chloride was not detected at MW-04-06R.

2.3 Utility Corridor Assessment

Additional sampling was completed adjacent to large utility corridors (storm and sanitary sewers) as part of the supplemental activities to further evaluate if preferential pathways created by the utility corridors are causing groundwater impacts to migrate around the Site in an unexpected manner. A total of nine soil borings were completed to a depth consistent with the utility invert elevation, and groundwater samples were collected when groundwater was encountered. Only storm sewer lines were included in the assessment because those were the only types of corridors expected to be large and/or deep enough to serve as potentially significant conduits for groundwater migration within the surrounding fill material. The potential for utility corridors to serve as pathways for off-site migration was previously evaluated as documented in the *Utility Corridor Assessment Memorandum* (ARCADIS 2012c). Additional utility corridor assessment activities were proposed as part of that initial assessment. Following comments from the MDEQ, the scope of work was modified as outlined in the email correspondence to the MDEQ dated January 16, 2013.

The original assessment focused on the most likely areas where off-site migration could occur; i.e., within corridors that exit the Site located in areas with groundwater contamination near property boundaries. In the areas where utility corridor samples were collected previously (Plant 2, Area 2 and Plant 6, Area 7), sampling did not indicate off-site migration was occurring. The supplemental activities were completed at key junctions of the storm sewers or at locations near the property boundary to further assess the potential for migration around the Site or off-site.

A total of nine hand auger borings were advanced at Plants 2, 3, and 6 to a depth consistent with the bottom of the targeted utility corridor. Where encountered, groundwater samples were collected using a temporary well and submitted for analysis of TAL metals and TCL VOCs and SVOCs. The locations of the utility corridor samples are provided on Figures 16, 17, and 18 (Plants 2, 3, & 6, respectively). The groundwater sample results are provided in Table 2. Boring logs for each location are included in Appendix C on the attached disc.

Groundwater samples were collected from four of the nine utility corridor borings. Groundwater was not encountered in the remaining five borings. Three of the utility corridor groundwater samples were collected at Plant 2, and the fourth sample was collected at Plant 6. All of the samples were non-detect for VOCs. The only SVOC detected above DW Criteria was bis(2-Ethylhexyl)phthalate (DEHP) at SB-A5.4-MA191, which is located in the northeastern portion of Plant 2. A duplicate sample was

also collected at SB-A5.4-MA191, and DEHP was not detected above the method detection limit. Low concentrations of phthalates detected in numerous soil and groundwater samples collected during the course of the RFI, according to correspondence with Merit Laboratories dated October 4, 2013, are believed to be a laboratory contaminant when present at low concentration.

Arsenic, lead, manganese, selenium, and vanadium were detected at Plant 2 above Part 201 Criteria at SB-A5-LT95. Of these, only dissolved manganese was detected above DW Criteria (but at a concentration less than Health Based Criteria) and dissolved selenium was detected above GSI Criteria. On the southern portion of Plant 6 dissolved vanadium exceeded DW Criteria at SB-A7-TD212. However, the occurrence of low-level metals concentrations in fill material adjacent to utility corridors does not appear to be a GSI issue based on the results of the storm water sampling presented in Section 2.4 below, and as discussed previously, manganese appears naturally elevated across the Site.

Based on the utility corridor assessment sampling results, storm sewer corridors at the Site do not appear to significantly affect contaminant migration.

2.4 Storm Sewer Sampling / GSI Assessment

Groundwater and soil impacts above GSI/GSIP Criteria have been identified in shallow soil and perched water at the Site at depths consistent with the storm sewer invert elevations in certain areas. Samples have been collected from the storm sewer at all discharge points on the Site during dry weather flow conditions to assess whether COCs may be entering the sewer via groundwater infiltration at concentrations that could exceed GSI Criteria at the Grand River. Three additional rounds of storm sewer sampling were completed at the Site in 2013, and flow measurements were collected at the southern Plant 3 outfall and Grand River to characterize the dilution of the Plant 6 discharge. A complete summary of the storm sewer analytical data collected to date is included as Table 10. The sampling locations are summarized on Figures 19 through 21. The laboratory analytical reports are provided as Appendix C on the attached disc.

Initial sampling in November 2012 indicated several metals exceedances at the Plant 6 and Plant 3 outfall locations; however, revised sampling methodology has limited turbidity and follow-up sampling events indicate only the southern outfall of Plant 6 has sporadic detections of selenium and xylenes slightly above the GSI Criteria (Outfall sample P6-MH-SW/P6-MH-SW2). The northern Plant 6 outfall (P6-MH-NE / P6-MH2-

NE), though, has also shown sporadic metals above GSI Criteria, however, the northern Plant 6 outfall discharges to the Lansing wastewater treatment facility. Additional storm sewer sampling completed since the RFI Phase 2 Report is summarized in Section 2.4.1 below.

A summary of the storm sewer sampling provided in the RFI Phase 2 Report asserted that, based on the distance to the Grand River (4,500 feet), the nominal exceedances of selenium and xylenes detected at the southern outfall of Plant 6 were not likely to reach the Grand River (GSI point of compliance) at a concentration in excess of the GSI Criteria. On the way to the river, the storm sewer was expected to receive additional groundwater discharge from the surrounding area that serves to dilute the COCs to concentrations below the GSI Criteria. Based on a suggestion provided by the MDEQ during the joint MDEQ-RACER-BWL meeting held on July 10, 2013, storm water flow measurements were collected during a low-flow period at the storm water discharge at the southern Plant 6 outfall and at the Grand River to provide a basis for dilution calculations. The results of the dilution calculations are discussed in Section 2.4.2 below.

2.4.1 Summary of 2013 Storm Sewer Sampling

Two rounds of storm water sampling were completed prior to preparation of the RFI Phase 2 Report. Three additional sampling events were completed as part of the additional assessment activities in 2013. Storm sewer samples were submitted for analysis of TCL VOCs and SVOCs, and TAL metals.

- During the November 2012 sampling event conducted at Plant 6, LNAPL was observed in Stormceptor ESC-2 located at the outfall of Plant 6 located east of the railroad easement. Following the stormceptor cleaning completed in January 2013, absorbent booms were placed in four structures located upgradient from the stormceptor and the stormceptor was inspected periodically for the presence of LNAPL. Periodic inspection of the absorbent booms and monitoring of stormceptor ESC-2 has not indicated additional accumulation of LNAPL or occurrence of LNAPL in upgradient storm sewer structures. Based on this result, the occurrence of LNAPL within ESC-2 is attributed to a one-time release within the former Plant 6 facility historically or during demolition activities.

- The storm outfall (2-006) for the storm sewer outfall on the western portion of Plant 2 was unable to be located during prior sampling events. The manhole

was located and sampled during September 2013 (sample P2-MH-W). The sample result did not indicate any COCs above Part 201 Criteria.

- During the September 2013 sampling event, concentrations of metals were detected slightly above GSI Criteria at the northeastern portion of Plant 6 (sample P6-MH2-NE). Arsenic was detected at a concentration of 0.011 mg/L compared to a GSI Criterion of 0.010 mg/L, and selenium was detected at a concentration of 0.006 mg/L compared to a GSI Criterion of 0.005 mg/L. Currently, storm sewer discharge from the northern portion of Plant 6 flows to the Lansing wastewater treatment facility where it is treated prior to discharging to the Grand River.

2.4.2 Summary of Storm Water Dilution Calculation

Based on a length of at least 4,500 feet between the Site and the Grand River, it is expected that dilution from groundwater infiltration will reduce the metals or xylenes leaving Plant 6 above the GSI Criteria to a concentration below the GSI Criteria before discharging to the Grand River. This was evaluated by measuring the flow within the sewer at the Plant 6 outfall during dry conditions and comparing that measurement to flow measured at the Grand River outfall located south of the Site. The difference between the flow measurements were then used to estimate a dilution rate for metals and xylenes that could potentially discharge to the Grand River.

The first monitoring location was the 36-inch outfall from Plant 6. The second measurement location was the 72-inch storm sewer outfall to the Grand River. Both measurement locations are shown on Figure 22. Due to the minimal water present at Plant 6 and storm sewer structures present at the Grand River outfall, direct measurements of groundwater velocity were not possible at either location. Rather, groundwater flow at each location was estimated based on visual inspection and the approximate time required to fill a 5-gallon bucket of water. These estimates are considered conservative because not all of the water flowing within the structures could be captured within the bucket, particularly at the 72-inch Grand River outfall where an estimated 25 to 50% of the flow was not captured in the bucket and not included in the measurement. Based on this method, the flow rate at Plant 6 was estimated to be a maximum of 2 gpm (i.e., approximately 3 minutes to fill a 5-gallon bucket). The flow rate at the Grand River was estimated to be a minimum of 12 gpm. A summary of the storm sewer flow measurements and a table summarizing the dilution calculations are included as Appendix G.

Based on these measurements, a conservative dilution factor of 6X is estimated for the storm sewer between Plant 6 and the Grand River. This result indicates the maximum concentrations of selenium and xylenes detected at the Plant 6 outfall (0.006 mg/L and 64 µg/L, respectively) would be 4-5X below GSI Criteria (0.001 mg/L and 10 µg/L, respectively) at the Grand River outfall. This estimate of dilution between the Site and the Grand River suggests that the sporadic exceedances of GSI Criteria that exit the Site at Plant 6 are unlikely to reach the Grand River outfall (point of compliance) at a concentration above GSI Criteria.

2.5 Vinyl Chloride Source Assessment – Bedrock/Deep Overburden on Plant 3

Following the submittal of the RFI Phase 2 Report and presentation of the RFI data to the MDEQ and the Lansing BWL, additional work was completed on the northern portion of Plant 3 to verify that vinyl chloride detected in bedrock and deep overburden monitoring wells was not emanating from Plant 3. Historically, the deep overburden/bedrock nested wells MW-04-03/MW-04-02 and MW-04-04/MW-91-4 located on the northwestern portion of Plant 3 have had vinyl chloride detected at concentrations above Part 201 Criteria. The scope of work outlining the additional characterization of vinyl chloride impacts on Plant 3 was provided to the BWL via email on September 3, 2013 and, following additional discussion with the BWL, was agreed upon on September 24, 2013. The scope of work included the installation of three additional bedrock monitoring wells, installation of two deep overburden monitoring wells, and sampling of two municipal water supply wells located near Plant 3.

The three additional bedrock wells were installed at Plant 3; two of the wells were located between the impacted areas on Plant 3 and the nested wells impacted with vinyl chloride, and one was located between the adjacent property (former heat treatment plant) and the nested wells. The purpose of the additional work was to 1) verify the CVOC impacts observed on the northwestern portion of Plant 3 are not related to the LNAPL area in the central portion of Plant 3, 2) better characterize the deep groundwater on the northern portion of Plant 3, and 3) provide additional information on the bedrock groundwater gradient across the northern portion of Plant 3.

To meet these goals, two wells (MW-13-37 and MW-13-38) were placed in the central portion of Plant 3 to confirm CVOCs are not emanating from the LNAPL area. The third well (MW-13-39B) was placed in the northern end of Plant 3 to provide additional groundwater elevation data in this area and determine if impacts are potentially migrating onto the Site from the former heat treating facility located adjacent to Plant 3 to the northeast. A Freedom of Information Act (FOIA) review completed on

September 30, 2013 indicated the former heat treating facility is a potential source of vinyl chloride, both within the perched zone and within the deep overburden. The location of the additional wells and the location of the former heat treating facility are shown on Figure 23.

At each proposed location, a boring was advanced into the saturated portion of the deep overburden and a VAP sample was collected from this zone. Advancement of the boring then continued into competent rock, where a 4-inch steel casing was installed and cemented in place. Sonic methods were then used to open a bedrock hole beneath the casing to create the bedrock well.

The location and recent groundwater sampling results from monitoring wells in this area are presented on Figure 23. The VAP and monitoring well samples were all non-detect for VOCs, with the exception of 1,4-dioxane detected in the VAP sample MW-13-38 (77 to 82 ft bgs) collected from the deep overburden above bedrock at a concentration of 47 µg/L. During the 2012 RFI activities, 1,4-dioxane was also detected within the deep overburden in this area at boring VAP-A17-DE144 at a concentration of 11 µg/L. Based on these results, a deep overburden well was also installed adjacent to MW-13-38 (MW-13-41) and an additional deep overburden well was installed to the north (MW-13-40) to complete the horizontal delineation. Based on this well and the other deep overburden wells in the area, the 1,4-dioxane appears limited in extent and is defined. Follow-up sampling of MW-13-41 indicates 1,4-dioxane at a concentration of 13 µg/L.

The results of the additional characterization confirm that vinyl chloride detected at the MW-04-03/MW-04-02 and MW-04-04/MW-91-4 well clusters does not emanate from the area of LNAPL and VOC impacts at Plant 3. In addition, the lower 1,4-dioxane investigation (Section 2.1) completed in the southwestern portion of Plant 3 did not detect vinyl chloride or other CVOCs at any sample location.

The bedrock groundwater elevation contour map included as Figure 11 suggests a horizontal gradient from west to east across the northern portion of Plant 3 with a groundwater high coincident with the bedrock valley described in Section 1.3 and in further detail in the RFI Phase 2 Report.

This result suggests the vinyl chloride impacts are not associated with the Site and are potentially associated with one or more of several off-site sources of deep vinyl chloride. Historical vinyl chloride impacts to the Saginaw-Grand River bedrock aquifer are well documented in the Lansing area and have been responsible for shutting down

a number of municipal water supply wells. In addition to the former heat treating facility discussed briefly above, there are three other known facilities with vinyl chloride contamination located northeast of Plant 3. The RFI Phase 2 Report provides a summary of potential off-site sources of contamination (ARCADIS 2013a).

2.5.1 Municipal Water Well Sampling

In parallel with the additional bedrock investigation on Plant 3, the Lansing BWL also requested the sampling of two municipal water supply wells (TWP well #4 and BWL #10-10) located near the Site. The purpose of the sampling was to determine if groundwater impacts could potentially migrate off-site at depths greater than the existing bedrock monitoring well network. The BWL #10-10 well is located northeast of Plant 3 and the TWP well #4 is located west of Plant 3 near the southwestern property boundary. A final plan outlining the methodology for sampling the municipal wells was provided to the MDEQ and BWL on November 13, 2013 via email. The MDEQ provided an email approving the sampling method on the same day.

At the time of sampling, BWL #10-10 was offline and the line-shaft pump had been removed for maintenance. The BWL #10-10 is a 410-foot, 14-inch bedrock well. The steel casing is installed to a depth of approximately 125 feet below grade followed by an open bedrock borehole to depth. A submersible pump was lowered into the well and groundwater samples were collected at 25 to 40-foot intervals beginning at the interval directly below the well casing and continuing to a total depth of 260 ft bgs. The exact depths of sampling were chosen based on inflections visible on a specific conductivity log collected prior to sampling. The conductivity log is included as Appendix H.

Groundwater samples were collected using low-flow sampling methods beginning shallow and continuing to deeper intervals. Samples were collected from depths of 130 ft bgs, 165 ft bgs, 195 ft bgs, 220 ft bgs, and 260 ft bgs. Lansing Township well TWP #4 is a 404-foot bedrock well that was online at the time of sampling. A single sample was obtained from the well sampling port. Groundwater samples for both municipal wells were submitted for analysis of TCL VOCs, 1,4-dioxane, and TAL metals. The results of the sampling event are included in Table 3.

Vinyl chloride was detected at BWL #10-10 at both the 220-foot sample and 260-foot sample intervals at a concentration of 2 µg/L. In addition, review of Table 3 indicates manganese above Part 201 DW Criteria of 0.050 mg/L. The maximum concentration of manganese (330 µg/L) was detected in the 130 ft bgs sample interval and then

decreased with depth. The manganese samples did not exceed the Health Based Criteria of 860 µg/L. Elevated manganese in groundwater appears to be naturally occurring across the region. Based on the decreasing trend observed at BWL #10-10, the manganese in the bedrock aquifer may be a shallow bedrock issue and significant pumping may dilute the manganese to a concentration below Part 201 Criteria.

Based on the results of the additional bedrock sampling and the data from existing bedrock and deep overburden wells at Plant 3, the vinyl chloride detected at BWL #10-10 does not appear to be associated with the Site. Based on the additional bedrock work completed at Plant 3, and the existing deep overburden and bedrock well data presented on Figure 23, a source of vinyl chloride has not been identified at Plant 3. The only detections of vinyl chloride at Plant 3 remain the nested wells on the northwestern portion of the Site.

3. Summary/Conclusions

The remaining data gaps outlined as part of the RFI Phase 2 Report have been addressed as part of the 2013 RFI supplemental activities. Additional work was also completed at the Site to address comments and suggestions provided by the MDEQ and the Lansing BWL.

To date the RFI has adequately characterized the nature and extent of impacts and associated risk with the Site. The data collected allows for the completion of the Final CMS pending the additional transport evaluations and monitoring of the lower 1,4-dioxane plume as noted below. The following conclusions are offered based on the 2013 RFI supplemental activities:

Lower 1,4-dioxane;

- The lower 1,4-dioxane plume is defined horizontally and vertically. The source area for the lower 1,4-dioxane plume is located beneath the "coliseum" on the southwestern portion of Plant 3. The lower 1,4-dioxane plume is approximately 2,400 feet long and migrates from the coliseum to the south-southwest within the deep overburden and weathered bedrock zones at depths typically between 65 to 75 ft bgs. Bedrock wells both along the axis of the plume and within the surrounding area indicate 1,4-dioxane has not migrated into the underlying consolidated bedrock. No additional delineation is proposed for the lower 1,4-dioxane plume at this time.

- The morphology and concentration of 1,4-dioxane along the axis of the plume suggest the plume may still be migrating to the south. Calculated groundwater velocity within the deep overburden and weathered bedrock zones is highly variable; however, based on the length and potential age of the plume (7 to 8 years), the groundwater velocity could be as high as 300 to 400 ft/yr. Additional characterization of groundwater velocity, including direct measurements of groundwater velocity and flow direction, will be completed prior to the June 2014 CMS submittal.

- Benzene and acetone exceed DW Criteria at locations generally coincident with the lower 1,4-dioxane plume. It is possible that leakage from the overlying perched zone in the central portion of Plant 2 may contribute impacts such as acetone to the lower 1,4-dioxane plume, particularly at the toe. However, there is no obvious source of benzene within the perched zone except in Area 2 on the western portion of Plant 2. Benzene and acetone within the weathered bedrock

are defined to DW Criteria except for benzene to the east near Saginaw Avenue at Monitoring Well MW-13-49. Confirmatory sampling results are pending; if results are below criteria, no additional investigation is warranted. If results exceed criteria, a step out monitoring well location will be considered east of this location. Because the benzene and acetone impacts are co-located with the 1,4-dioxane, the CMS strategy for mitigation of 1,4-dioxane will also address benzene and acetone

- Vertical gradients at the Site vary depending on bedrock formation. Vertical gradient within the Grand River Formation beneath the source area is negligible. Vertical gradient in the Saginaw Formation, located beneath the downgradient portion of the plume, is strongly downward indicating a high degree of vertical anisotropy and poor vertical communication. A bedrock groundwater elevation contour map corrected for vertical gradient (i.e., effective head) is a good match for the distribution of the lower 1,4-dioxane plume. Additional characterization of groundwater flow direction, including direct measurements of groundwater velocity and flow direction, will be completed prior to the June 2014 CMS submittal.

- A bedrock groundwater elevation transducer study was completed in 2012 at bedrock wells installed in the Saginaw Formation in the central portion of Plant 2. The results of the study show no discernible hydraulic response related to municipal pumping. This result is indicative of the limited hydraulic connection between the shallow bedrock beneath the lower 1,4-dioxane plume and nearby municipal water supply wells. An additional transducer study will be completed in bedrock wells installed along the axis of the lower 1,4-dioxane plume including wells installed within the Grand River Formation near the coliseum source area prior to the June 2014 CMS submittal.

Metals:

There are several areas at the Site where metals in perched water marginally exceed the Groundwater Surface Water Interface (GSI) and/or DW Criteria near to the property boundary. Confirmatory sampling indicates concentrations remain either consistent (Area 7) or sporadic (Area16) at the property boundary. Even though there are exceedances of criteria, these results do not suggest there is concern under current conditions. Perched groundwater in these locations is not used as a drinking water resource and unlikely to be used for drinking water in the future. Existing or potential off-site exceedances for metals will be addressed as part of the CMS.

- Northern Plant 3 (Areas 14, 17, and 18): Historical soil samples indicated arsenic at concentrations above the current Part 201 DWP Criteria. Soil borings advanced in 2013 at historical locations near the Plant 3 property boundary indicate all verification samples were below Part 201 Criteria for arsenic. Arsenic in soil is therefore defined at the property boundary.

- Plant 3, Area 16: Additional work was completed in this area to define metals in soil and groundwater. The scope of work included two soil borings near the property boundary, installation of three monitoring wells and collection of groundwater samples for metals and other site COCs.

    - Additional soil samples collected at the eastern property boundary indicated several metals still exceed criteria; however, the adjacent property is a 200 ft wide rail yard easement and the owner has refused to allow access for additional sampling.

    - Groundwater samples collected in November 2013 from monitoring well MW-13-32 at the eastern property boundary indicate manganese and nickel exceed DW Criteria. Lead exceeded DW Criteria during the August 2013 sampling event. Manganese is likely naturally occurring and does not exceed Health Based Criteria. Lead appears to be associated with turbidity.

- Plant 6, Area 7: Additional samples collected from off-site monitoring wells located south of Plant 6 indicate vanadium and arsenic concentrations in groundwater slightly above DW Criteria. Vanadium has been detected off-site at concentrations of 0.008 and 0.005 mg/L, slightly above the DW Criteria of 0.0045 mg/L, and arsenic has been detected off-site at a concentration of 0.015 mg/L, slightly above the DW Criteria of 0.010 mg/L.

- Plant 6, Area 5-8: Vanadium in groundwater exceeds the DW Criteria at P6-SB-35, located 200 feet from the eastern property boundary. An additional shallow monitoring well installed along the eastern Plant 6 property boundary also indicates vanadium at a concentration of 0.005 mg/L, slightly above the DW Criteria of 0.0045 mg/L.

- Plant 6, Bedrock Metals: Historically, metals above DW Criteria have been detected at Plant 6 in historical bedrock wells MW-04-06 (lead) and MW-04-04(4) (arsenic, beryllium, total chromium, cobalt, lead, manganese, nickel, and vanadium). In addition, vinyl chloride had been detected at low levels in MW-04-

06. It was postulated that impacts within these wells were potentially related to well construction issues. Both wells were abandoned and replaced in 2013. Groundwater sampling indicated the wells were below DW Criteria for all COCs with the exception of arsenic. Arsenic was detected in both wells at a concentration of 0.021 mg/L, in excess of the DW Criterion of 0.010 mg/L. Vinyl chloride has not been detected in the replacement well MW-04-06R. Confirmatory sampling will be completed to assess the variability of arsenic in bedrock. A geochemical conceptual site model will be developed from data collected as part of the interim groundwater sampling plan to determine how geochemical conditions, either locally or regionally, may contribute to arsenic exceedances in the bedrock aquifer.

Storm sewers/utility corridors:

- Additional Utility Corridor Sampling: At the request of the MDEQ, nine additional soil borings were completed in 2013 adjacent to selected large utility corridors interior to the Site (storm sewers) to evaluate if utility corridors are potential pathways for preferential migration of site-related COCs in groundwater. Groundwater samples were collected from depths consistent with utility invert elevations when encountered. Several COCs were encountered at concentrations exceeding DW or GSI Criteria including arsenic, manganese, selenium, and vanadium, as well as bis(2-Ethylhexyl)phthalate. The COCs do not exceed criteria in storm water sampled downgradient of the impacts (discussed below) and the bis(2-Ethylhexyl)phthalate exceedance was not reported in the duplicate sample collected at this location. Based on the utility corridor assessment sampling results, utility corridors at the Site are not a significant pathway for contaminant migration.

- Storm Sewer Monitoring: Two rounds of storm water sampling were completed prior to the RFI Phase 2 Report. Three additional sampling events were completed as part of the additional assessment activities in 2013. Concentrations of metals and xylenes in storm water in excess of the GSI Criteria were detected in the southern Plant 6 outfall during the January 2013 sampling event. Additional samples collected in 2013 have not indicated GSI exceedances at any of the outfalls on-site with the exception of the northern Plant 6 outfall that currently flows to the Lansing wastewater treatment facility.

    - Flow measurements were collected of storm water discharge both at the southern Plant 6 outfall and at the Grand River outfall to verify that dilution

will reduce the sporadic GSI exceedances detected at the Plant 6 to a concentration below the GSI Criteria at the Grand River. Based on a conservative dilution factor estimate of 6X, the maximum concentrations of selenium and xylenes detected at the Plant 6 outfall (0.006 mg/L and 64 µg/L, respectively) would be 4-5X below GSI Criteria (0.001 mg/L and 10 µg/L, respectively) at the Grand River. This estimate of dilution between the Site and the Grand River suggests that the exceedances of GSI Criteria that may exit the Site at Plant 6 are unlikely to reach the Grand River at a concentration above GSI Criteria.

- Plant 6 Stormceptor ESC-2: Following removal of LNAPL from the stormceptor ESC-2 in January 2013, periodic inspection of the absorbent booms and monitoring of ESC-2 throughout 2013 has not indicated additional accumulation of LNAPL or occurrence of LNAPL in upgradient storm sewer structures. Based on this result, the occurrence of LNAPL within ESC-2 is attributed to a one-time release either within the former Plant 6 facility or during demolition activities.

<u>Plant 3 Vinyl Chloride Assessment:</u>

- Additional characterization was completed on the northern portion of Plant 3 to verify that vinyl chloride detected in nested wells on the northwestern portion of Plant 3 was not related to any known source areas. Vinyl chloride was not detected at any of the five newly installed bedrock or deep overburden monitoring wells. These results show that the vinyl chloride detected in the nested wells on the northwestern portion of Plant 3 are not associated with the Site and may originate from one or more of the known off-site sources for vinyl chloride.

  - 1, 4-Dioxane was detected in the deep overburden at one of the bedrock well boring locations (MW-13-38) and subsequently defined laterally and vertically utilizing two additional deep overburden wells and the existing deep overburden and bedrock monitoring well network. Based on the results from these wells, the extent of 1,4-dioxane in this area appears limited.

  - Municipal Water Supply Wells: Samples were collected from two municipal water supply wells located adjacent to Plant 3. Vinyl chloride was detected in the two deepest samples collected at BWL #10-10 located

northeast of Plant 3. Based on the results of the additional characterization outlined above, the vinyl chloride detected at BWL #10-10 does not appear to be associated with Plant 3. VOCs were not detected in the Lansing Township well located west of Plant 3 (TWP #4) and all metals were below Part 201 Criteria.

3.1 Path Forward

The RFI to date has adequately characterized the nature and extent of impacts and associated risk at the Site and allows for the completion of the Final CMS pending the additional transport evaluations and monitoring of the lower 1,4-dioxane plume. Based on the results of the RFI ARCADIS recommends to following:

- Confirmatory sampling results for benzene at MW-13-49 are currently pending; if the benzene results are below criteria, no additional investigation is warranted. If results exceed criteria, a step out monitoring well location will be considered.

- Passive Flux Meter (PFM) Study - February-March 2014 - Additional characterization of groundwater velocity and flow direction will be completed at monitoring wells installed within the lower 1,4-dioxane plume.

- Bedrock Transducer Study - March 2014 - Additional characterization of the bedrock water levels will be completed in bedrock well located below and near to the lower 1,4-dioxane plume.

The following submittals will be prepared as recommended in the Draft Corrective Measures Study (Draft CMS, ARCADIS 2013b):

- Groundwater Plume Stability and Geochemical Assessment Memo - April 2014 - This submittal will provide a preliminary assessment of plume stability and a geochemical model summarizing groundwater conditions at the Site.

- Final Corrective Measures Study - June 2014 - A Final CMS will be prepared and submitted to MDEQ for review.

- Revised Interim Groundwater Monitoring Plan - April 2014 - This plan will outline the recommendations for continued groundwater monitoring at the Site. The revised plan will be based on the results of the groundwater monitoring to date, the plume stability and geochemical assessment, and additional data required for

the development of a groundwater monitoring program to support corrective measures.

August 13, 2012	ARCADIS	MDEQ	Email	RFI Phase 2 Work Plan - Characterization Stage SOW Comments	PC response to questions from MDEQ related to historical data used in model to develop SOW.	Response to Comments
August 21, 2012	MDEQ	ARCADIS and RACER	Letter	RFI Phase 2 Work Plan - Characterization Stage SOW	Approval letter from MDEQ for the RFI Phase 2 Work Plan - Characterization Stage SOW. Letter dated 08/21/12	Approval
August 1, 2012	ARCADIS	RACER	Email with file attached	2012 Annual EA Budget Amendment Request #1	Submitted 2012 BA #1 to RACER on 8/1/12. Requested funds to cover additional investigation of expanded number of AOIs.	Submittal

Table 1
Summary of Project Correspondence and Submittals
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Date	Originator	Recipient(s)	Type of Correspondence	Subject	Subject Details	Purpose of Correspondence
August 3, 2012	RACER	ARCADIS	Email	2012 Annual EA Budget Amendment Request #1	RACER and MDEQ approved (signed) BA #1 on 08/03/12	Approval
August 16, 2012	ARCADIS	RACER	Email with file attached	2012 Annual EA Budget Amendment Request #2	Submitted BA #2 to RACER on 8/16/12. Requested funds to cover increased number of borings/samples collected at each AOI. Original estimates based on 3 boring/AOI and 3 samples/boring. Also requested funds to evaluate GSI criteria and complete groundwater sampling from within the storm sewers.	Submittal
August 24, 2012	RACER	ARCADIS	Email	2012 Annual EA Budget Amendment Request #2	RACER and MDEQ approved (signed) BA #2 on 08/29/12	Approval
August 13, 2012	ARCADIS	MDEQ	Email	RACER Lansing Sample Parameters	ARCADIS request to reduce parameters analyzed during investigation. Specifically request to reduce SVOCs to PNAs, where applicable, and to reduce list of metals.	Submittal
August 29, 2012	ARCADIS	MDEQ	Email	Access to Adams Plating Site and to Collect Groundwater Samples from the APC wells.	ARCADIS requests access to the APC property and for permission to sample the APC wells. MDEQ to coordinate with the APC PM for access.	Request for Information
August 29, 2012	MDEQ	MDEQ	Email	Access to Adams Plating Site for Off-Site Groundwater Samples	update from MDEQ on coordination with APC PMs to get us access to APC property to sample wells.	Response to Comments
September 14, 2012	ARCADIS	RACER and MDEQ	Email	Adams Plating Company Groundwater Sampling Plan.	Submitted Work Plan to MDEQ for sampling the groundwater monitoring wells at Adams Plating. MDEQ responded with questions about methods and pump type..	Submittal
September 26, 2012	ARCADIS	MDEQ	Email	RACER Updates	Email exchanges updating MDEQ with findings from the Characterization Phase of the investigation and proposing additional contingency VAP borings at select locations. MDEQ approval on contingency boring locations via email dated 09/13/12	Approval
October 15, 2012	ARCADIS	MDEQ	Email with file attached	RACER Lansing - Storm water Sampling Plan	Submitted Storm water Sampling Plan, near the property boundaries, to MDEQ on 10/18/12.	Submittal
October 15, 2012	MDEQ	ARCADIS	Email	RACER Lansing - Storm water Sampling Plan	MDEQ approval of the Storm water Sampling Plan. Approval via email dated 10/18/12	Approval
October 15, 2012	ARCADIS	MDEQ	Email	RACER Lansing Pump Test	Discussed completing pump tests on bedrock wells to see if influence on drinking water aquifer present. Also discussed transducer data collected in Oct. 2012.	General Correspondence
November 2, 2012	ARCADIS	RACER	Email with file attached	2012 Annual EA Budget Amendment Request #3	Submitted 2012 BA #3 to RACER on 11/2/12. Requested funds to cover additional borings/samples at the AOIs, to conduct a utility corridor investigation near the property boundary, to complete soil gas sampling, to complete pump test and to complete an LNAPL mobility assessment at Plants 2 & 3.	Submittal
November 15, 2012	RACER	ARCADIS	Email with file attached	2012 Annual EA Budget Amendment Request #3	RACER and MDEQ approved (signed) BA #3 on 11/15/12	Approval
November 26, 2012	ARCADIS	MDEQ	Email with file attached	RACER Lansing Pumping Test Work Plan	Submitted Pump Test Work Plan to MDEQ for review and approval.	Submittal
November 27, 2012	ARCADIS	MDEQ	Email	RACER Lansing Pumping Test Work Plan	Follow up with MDEQ on review of Work Plan. MDEQ to discuss internally with there experts and get back to us. Possible test cancellation.	General Correspondence
December 3, 2012	ARCADIS	MDEQ	Email with file attached	RACER Trust Utility Corridor Assessment Work Plan	Submitted Utility Corridor Assessment Work Plan to the MDEQ, via memo format, on 12/03/12.	Submittal
December 21, 2012	MDEQ	ARCADIS	Email	Comments on RACER Lansing Storm Sewer Sampling Summary Report	MDEQ comments to the Storm water Sewer Sampling Report. MDEQ thinks Stormceptor should remain in place (interim measure). Metals exceedances, whether total or dissolved, still coming from site and need to be addressed.	Response to Submittal
December 1, 2012	ARCADIS	RACER	Email with file attached	RACER Lansing - 2013 EA Annual Budget Request	Submitted final 2013 Annual Budget Request to RACER on 12/18/12. Original budget request to cover PM and routine GWS only.	Submittal
January 1, 2013	RACER	ARCADIS	Email	RACER Lansing - 2013 EA Annual Budget Request	RACER and MDEQ approved (signed) the 2013 Annual Budget request on 12/20/12 and 01/2/13 respectively.	Approval
January 12, 2013	ARCADIS	MDEQ	Email	RACER Lansing - response to comment related to Soil Gas sampling and Utility Corridor Assessment	Email to MDEQ to inquire if MDEQ has reviewed ARCADIS response to MDEQs comments	General Correspondence
January 24, 2013	MDEQ	RACER and MDEQ	Email	RACER Lansing - response to comments related to soil gas sampling and the utility corridor assessment	Approval from MDEQ related to soil gas sampling and utility corridor assessment work plans.	Approval
February 28, 2013	ARCADIS	RACER and MDEQ	meeting	MDEQ Delineation Milestone Meeting.	Meeting at MDEQ to discuss the Phase 2 Investigation results and delineation of each AOI.	Meeting

Table 1
Summary of Project Correspondence and Submittals
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Date	Originator	Recipient(s)	Type of Correspondence	Subject	Subject Details	Purpose of Correspondence
February 28, 2013	ARCADIS	RACER	Email with file attached	2013 EA Budget Amendment Request #1	Submitted 2013 BA #1 to RACER. BA #1 to cover costs for utility corridor investigation, additional storm sewer sampling, to complete the NAPL mobility assessment and to begin the 1,4-dioxane investigation at Plant 3.	Submittal
March 1, 2013	RACER	ARCADIS	Email	2013 EA Budget Amendment Request #1	2013 BA #1 approved by MDEQ on 03/08/2013	Approval
April 3, 2013	ARCADIS	RACER and MDEQ	Hardcopy	RACER Lansing RFI Phase 2 Activities Summary Report	Submitted the RACER Lansing RFI Phase 2 Activities Summary Report to RACER and MDEQ on April	Submittal
April 11, 2013	ARCADIS	RACER and MDEQ	Email with file attached	Plant 3 1, 4-dioxane Results	ARCADIS update to MDEQ on 1,4-dioxane investigation. Results indicate east and vertical delineation incomplete, coliseum recharge affecting plume migration, will continue investigation consistent with approved contingency scope - install 3 overburden wells and 1 overburden well	Submittal
May 1, 2013	ARCADIS	RACER and MDEQ	Harcopy	RACER Lansing - Revised Interim Groundwater Sampling Work Plan	Submitted Revised Interim Groundwater Sampling Work Plan to MDEQ for review and approval. Work plan addresses the issue of turbidity and how we propose to purge/redevelop high turbidity wells.	Submittal
May 2, 2013	ARCADIS	RACER and MDEQ	Email with file attached	RACER Lansing - Plant 3 1, 4-Dioxane Investigation	Update to the MDEQ summarizing the Plant 3 1,4-dioxane investigation. The southeast boring, completed as part of the contingency borings, turned up 1,4-dioxane above criteria, 130 ug/L in the deep interval (on top of rock) and 38 ug/L in the monitoring well set a few feet above. Attached is the proposed conceptual layout for additional borings to define the extent of the 1,4-dioxane plume.	Submittal
May 13, 2013	MDEQ	RACER and MDEQ	Email	RACER Lansing - Plant 3 1, 4-Dioxane Investigation	MDEQ reviewed info regarding the Plant 3 1, 4-dioxane investigation and concurs with the proposed conceptual layout for additional borings.	Approval
June 1, 2013	ARCADIS	RACER	Email with file attached	2013 EA BA #2 request	Submitted BA #2 budget request to RACER on 6/12/2013. 2013 BA #2 to cover extended 1,4-dioxane investigation and collection of groundwater geochemical parameters	Submittal
June 6, 2013	MDEQ	RACER and MDEQ	Email	RACER Lansing - Revised Interim Groundwater Sampling Work Plan	DEQ reviewed the Revised Interim GWS Work Plan and found it acceptable, need to provide DEQ with a hard copy for their records.	Approval
June 13, 2013	ARCADIS	RACER, MDEQ and BWL	Meeting	Meeting with BWL	Meeting with BWL to discuss the results of the investigation to date and to get input from BWL	Meeting
June 27, 2013	ARCADIS	RACER and MDEQ	Email with file attached	RACER Lansing Plants 2,3 and 6 Corrective Measures Study	Submitted Draft RCRA Corrective Action Corrective Measures Study Report (electronically) to MDEQ on 06/27/13	Submittal
July 10, 2013	ARCADIS	RACER, MDEQ, BWL and Lansing Township	Meeting	Corrective Action Meeting with various stakeholders (RACER, MDEQ, BWL and Lansing Township).	Meeting to the various stake holders to discuss the proposed corrective measures. Meeting took place 07/10/13	Meeting
August 8, 2013	ARCADIS	MDEQ	Email with file attached	RACER Lansing - addendum to interim groundwater sampling plan - August 2013	Discussion of elevated turbidity present in the monitoring wells and how it will be addressed during the future sampling events.	General Correspondence
August 8, 2013	MDEQ	ARCADIS	Email	RACER Lansing - addendum to interim groundwater sampling plan - August 2013	MDEQ approved addendum to interim GWS which requested not to purge 3 hours on high turbidity wells. If turbidity is elevated AUS will collect total and dissolved metals samples.	Approval
August 15, 2013	BWL	RACER, ARCADIS, MDEQ and Lansing Township	Harcopy	Comments to RFI, CMS and BWL	Letter from BWL, dated 8/19/13, related to comments/concerns to the RFI and proposed corrective measures reports and the stakeholders meeting from 07/10/13	Response to Submittal
August 19, 2013	ARCADIS	RACER, MDEQ, BWL and Lansing Township	Email	RACER Lansing - Municipal Well Sampling	Email to MDEQ summarizing the BWL and Lansing Township request that ARCADIS sample municipal wells BWL 10-10 and Twp. Well #4 and ARCADIS agreement to grant request.	General Correspondence
September 1, 2013	ARCADIS	RACER	Email with file attached	2013 EA BA #3 Request	Submitted BA #3 request to RACER on 09/18/2013. BA #3 to cover additional 1,4-dioxane investigation, meeting with stake holders and groundwater sampling	Submittal
September 1, 2013	ARCADIS	RACER	Email	2013 EA BA #3 Request	2013 BA #3 approved (signed) by RACER on 09/23/13	Approval
September 4, 2013	ARCADIS	RACER and MDEQ	Meeting	RACER Lansing RFI-CMS Update	Meeting with MDEQ to discuss RFI activities, surface cover/O&M, BWL comment letter, updated CMS costs and budget amendments	Meeting
September 12, 2013	ARCADIS	RACER, MDEQ and BWL	Meeting	RACER Lansing - BWL Bedrock Summary	Discussion with BWL related to CSM, deep 1,4-dioxane investigation, CVOCs, and regional vinyl chloride	Meeting
September 24, 2013	ARCADIS	RACER and BWL	Email	RACER Lansing - BWL Plant 3 Vinyl Chloride Bedrock Well Install	Email correspondence with BWLs consultant related to the installation of bedrock monitoring wells at the northern end of Plant 3. Proposed to install 3 bedrock wells to better understand the Vinyl Chloride impacts and to confirm the Vinyl Chloride is related to an off site source. BWL agreed to approach in the email chain and Phone conversation between 0925/13 and 09/25/13.	General Correspondence

Table 1
Summary of Project Correspondence and Submittals
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Date	Originator	Recipient(s)	Type of Correspondence	Subject	Subject Details	Purpose of Correspondence
September 24, 2013	ARCADIS	RACER and MDEQ	Email with file attached	RACER Lansing Plants - Groundwater Restricted Area for City of Lansing	Provided MDEQ with existing language from the City ordinance restricting groundwater use and wells within the City proper.	Submittal
September 25, 2013	ARCADIS	RACER and MDEQ	Email with file attached	Plant 2 & 3 Conceptual 1, 4-dioxane investigation	Submitted the Plant 2 & 3 Conceptual 1, 4-dioxane investigation scope of work to MDEQ via an email dated 09/25/13 for their review and approval.	Submittal
October 1, 2013	MDEQ	RACER and MDEQ	Email	Plant 2 & 3 Conceptual 1, 4-dioxane investigation	DEQ reviewed the conceptual 1,4 dioxane investigation plans and find them to be acceptable with the following understanding based on phone conversation with Joe Rogers; all wells/borings being installed in areas of known groundwater contamination would be double cased as described in the weathered bedrock VAP sampling bullet of the 1,4-dioxane conceptual work plan.	Approval
November 13, 2013	ARCADIS	RACER and MDEQ	Email	BWL Well Sampling Work Plan	Submitted proposed sampling plan to MDEQ for their review and approval via an email dated 11/13/13	Submittal
November 13, 2013	MDEQ	ARCADIS	Email	BWL Well Sampling Work Plan	MDEQ approval of the proposed BWL Well Sampling Plan via an email dated 11/15/2013	Approval
November 13, 2013	ARCADIS	RACER and MDEQ	Email with file attached	Work Plan - Delineation of Excavation Areas at Plant 6	Submitted the Work Plan for delineation of excavation areas at Plant 6 to MDEQ for review and approval.	Submittal
November 21, 2013	ARCADIS	RACER, HMA and MDEQ	Meeting	RACER Lansing CSM Review	Meeting to discuss CSM related to 1,4-Dioxane investigation/treatment	Meeting
November 22, 2013	MDEQ	RACER	Email	Work Plan - Delineation of Excavation Areas at Plant 6	MDEQ approval of the Delineation of Excavation Areas Work Plan. Approval via email dated 11/22/13.	Approval
January 15, 2014	ARCADIS	MDEQ and RACER	Email with file attached	4th Quarter 2013 Quarterly Progress Report	Submitted 4Q13 Quarterly Progress Report to MDEQ	Submittal

Table 2
Summary of Groundwater Vertical Aquifer Profile (VAP) Sample Analytical Results
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Table Notes:

-- Shading indicates result exceeding one or more MDEQ Part 201 Generic Cleanup Criteria and Screening Levels, Dated March 25, 2011.
-- Bold fonts represent data where detections were noted above the MDL but below MDEQ Part 201 Generic Cleanup Criteria.
-- Data shown in [ ] represent duplicate sample analytical results.
mg/L - milligrams per liter
µg/L - micrograms per liter
* - Location was resampled in order to collect duplicate and MS/MSD data
[a] - Sample exceeds Residential Drinking Water Criteria
[b] - Sample exceeds Groundwater Surface Water Interface Criteria
[c] - Sample exceeds Non-Residential Groundwater Volatilization to Indoor Air Inhalation Criteria
[e] - Sample exceeds Water Solubility Criteria
[e] - Sample exceeds Flammability and Explosivity Screening Levels
[f] - Sample exceeds Non-Residential Groundwater Concentrations for Vapor Intrusion

MDEQ Criteria Footnotes: (as revised September 28, 2012)

- - = Not listed in the MDEQ Criteria Tables.
ID = Insufficient data to develop a criterion.
Na = Not available.
NLV = Not likely to volatilize.
d = If the calculated criterion is below State of Michigan Safe Drinking Water Standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005, the criterion defaults to the Safe Drinking Water Standard.
A = Criterion is the state of Michigan drinking water standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005.
D = Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).
E = Criterion is the aesthetic drinking water value, as required by Section 20120a(5) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA).
F = Criterion is based on adverse impacts to plant life and phytotoxicity.
G = Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life shall be calculated based on the pH or hardness of the receiving surface water. A hardness value of 257 mg/L was used.
L = Criteria for lead are derived using a biologically based model, as allowed for under Section 20120a(10) of the NREPA, and are not calculated using the algorithms and assumptions specified in pathway-specific rules.
M = Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.
S = Criterion defaults to the hazardous substance-specific water solubility limit.
W = Concentrations of trihalomethanes in groundwater shall be added together to determine compliance with the Michigan drinking water standard of 80 ug/L.
X = The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source.
AA = Comparison to these criteria may take into account an evaluation of whether the hazardous substances are adsorbed to particulates rather than dissolved in water and whether filtered groundwater samples were used to evaluate groundwater.

Lab and Validation Data Qualifiers:

B = Compounds also found in associated method blank
D = Compound quantified using a secondary dilution
E = Analyte exceeds calibration range
I = Matrix interference with internal standard
J = The compound/constituent was positively identified; however, the associated numerical value is an estimated concentration only.
K = Elevated reporting limits due to low total solids
N = Normal Sample
p = Benzo(b)fluoranthene and Benzo(k)fluoranthene integrated as one peak
R = Rejected
S = Surrogate recovery outside of control limits
T = No correction for total solids
UB = Compound considered non-detect at the listed value due to associated blank contamination.
UJ = The analyte was not detected above the quantitation limits, however the quantitation limits is estimated
U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
X = Elevated reporting limit due to matrix interference
z = Sample preserved in the lab

Table 3
Summary of Groundwater Monitoring Well Sample Analytical Results
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Table Notes:

-- Shading indicates result exceeding one or more MDEQ Part 201 Generic Cleanup Criteria and Screening Levels, Dated March 25, 2011.
-- Bold fonts represent data where detections were noted above the MDL but below MDEQ Part 201 Generic Cleanup Criteria.
-- Data shown in [ ] represent duplicate sample analytical results.
mg/L - milligrams per liter
µg/L - micrograms per liter
** - Sample collected by others and analytical reports provided to ARCADIS. This data was not validated
[a] - Sample exceeds Residential Drinking Water Criteria
[b] - Sample exceeds Groundwater Surface Water Interface Criteria
[c] - Sample exceeds Non-Residential Groundwater Volatilization to Indoor Air Inhalation Criteria
[d] - Sample exceeds Water Solubility Criteria
[e] - Sample exceeds Flammability and Explosivity Screening Levels
[f] - Sample exceeds Non-Residential Groundwater Concentrations for Vapor Intrusion

MDEQ Criteria Footnotes: (as revised December 30, 2013)

- - = Not listed in the MDEQ Criteria Tables.
ID = Insufficient data to develop a criterion.
Na = Not available.
NLV = Not likely to volatilize.
d = If the calculated criterion is below State of Michigan Safe Drinking Water Standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005, the criterion defaults to the Safe Drinking Water Standard.
A = Criterion is the state of Michigan drinking water standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005.
D = Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).
E = Criterion is the aesthetic drinking water value, as required by Section 20120a(5) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA).
F = Criterion is based on adverse impacts to plant life and phytotoxicity.
G = Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life shall be calculated based on the pH or hardness of the receiving surface water. A hardness value of 257 mg/L was used.
L = Criteria for lead are derived using a biologically based model, as allowed for under Section 20120a(10) of the NREPA, and are not calculated using the algorithms and assumptions specified in pathway-specific rules.
M = Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.
S = Criterion defaults to the hazardous substance-specific water solubility limit.
W = Concentrations of trihalomethanes in groundwater shall be added together to determine compliance with the Michigan drinking water standard of 80 ug/L.
X = The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source.
AA = Comparison to these criteria may take into account an evaluation of whether the hazardous substances are adsorbed to particulates rather than dissolved in water and whether filtered groundwater samples were used to evaluate groundwater.
HH = The residential criterion for sodium is 230,000 ug/L in accordance with the Sodium Advisory Cuoncil recommendation and revised Groundwater Discharge Standards.

Lab and Validation Data Qualifiers:

B = Compounds also found in associated method blank
D = Compound quantified using a secondary dilution
E = Analyte exceeds calibration range
I = Matrix interference with internal standard
J = The compound/constituent was positively identified; however, the associated numerical value is an estimated concentration only.
K = Elevated reporting limits due to low total solids
N = Normal Sample
p = Benzo(b)fluoranthene and Benzo(k)fluoranthene integrated as one peak
R = Rejected
S = Surrogate recovery outside of control limits
T = No correction for total solids
UB = Compound considered non-detect at the listed value due to associated blank contamination.
UJ = The analyte was not detected above the quantitation limits, however the quantitation limits is estimated
U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
X = Elevated reporting limit due to matrix interference
z = Sample preserved in the lab

Notes:

KGS Model (Hyder et al, 1996) - fully transient model for an overdamped slug test in a confined aquifer for fully and partially penetrating wells. Has solutions for both confined and unconfined aquifers.

Bouwer and Rice Model (1976) - semi-analytical method for the analysis of an overdamped slug test in a fully or partially penetrating well. Has solutions for both confined and unconfined aquifers.

BOLD - Best fit

* - Average of slug-in and slug-out data for solution method that best fits the data- either the Bouwer and Rice or KGS solutions (not both)

NA - Not applicable/Not analyzed. Data for slug-in or slug-out not recorded or not analyzed using specified model.

feet bgs - feet below ground surface

feet toc - feet below top of casing

ft/day - feet per day

cm/sec - centimeters per second

Notes:
1. GSI Criteria obtained from the MDEQ Part 201 generic cleanup Table 1, dated September 28, 2012.
2. The total chromium data is compared to the cleanup criteria for Chromium VI.
3. **Bold** and shading denotes a result above of the Groundwater Surface Water Interface Criteria.
4. - - indicates criteria is not developed.
5. *- Same storm sewer as P6-MH-SW but collected from next structure downgradient, immediately before the stormceptor
6. [1] - Turbid sample; submitted for total metals
7. Gray shading - The January 18, 2013 samples for P3-MH-S and P3-MH-NE were inadvertantly labeled with the same name,
It is therefore unclear which result goes with which sample. Results will be confirmed during follow-up sampling events.
8. Only those constituents of concern (COCs) with detections are listed. If a COC is not listed then the lab results showed non-detect.

MDEQ Criteria Footnotes: (as revised September 28, 2012)
(G) Groundwater surface water interface (GSI) criterion depends on the water hardness of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life was calculated based on the average of readily available published hardness values calculated to be 257 mg/L. The generic GSI criterion is the lesser of the calculated FCV, the wildlife value (WV), and the surface water human nondrinking water value (HNDV).
(X) The GSI criterion is not protective for surface water that is used as a drinking water source.
ID = Insufficient data to develop a criterion.
- - = Not listed in the MDEQ Criteria Tables.

Acronyms and Abbreviations:
GSI = Groundwater Surface Water Interface
NA = Not analyzed
ND = Not detected.

NOTE:

Map includes only the maximum concentration of 1,4-dioxane detected at each VAP boring or monitoring location. Only the values shown were used to calculate the iso-contours.

All 1,4-dioxane values given in micrograms per liter (ug/L)

UB is a validation qualifier indicating that the compound is considered non-detect at the listed value due to associated blank contamination.

NOTES:

White boxes contain soil analytical data. There are no storm drains in the area, therefore only soil concentrations exceeding MDEQ Drinking Water Protection (DWP) and/or Direct Contact (DC) Criteria are noted. Concentrations must exceed Statewide Background Default (SBG) levels, where applicable, to be considered an exceedance. Concentrations in orange exceed DC Criteria. All values are presented in milligrams per kilogram (mg/kg).

Blue boxes contain groundwater analytical data. Only groundwater concentrations exceeding Drinking Water (DW) Criteria are noted. The Health-Based Value (HBV) of manganese is also noted due to its widespread occurrence.

Blue boxes contain groundwater analytical data. Only groundwater concentrations exceeding Part 201 Drinking Water (DW) or Groundwater Surface Water Interface (GSI) Criteria are noted. The Health Based Value (HBV) of manganese is also noted due to its widespread occurrence.

T. Metals indicates total metals in unfiltered groundwater. D. Metals indicates dissolved metals in filtered groundwater. Samples are generally filtered when turbidity is greater than 10 Nephelometric Turbidity Units (NTU). All values are presented in milligrams per liter (mg/L).

Soil Criteria -

Arsenic	DWP: 4.6 mg/kg; SBG: 5.8 mg/kg
Boron	DWP: 10 mg/kg
Cobalt	DWP: 0.8 mg/kg ; SBG: 6.8 mg/kg

NOTES:

Blue boxes contain groundwater analytical data. Only groundwater concentrations exceeding Part 201 Drinking Water (DW) or Groundwater Surface Water Interface (GSI) Criteria are noted. The Health Based Value (HBV) of manganese is also noted due to its widespread occurrence.

T. Metals indicates total metals in unfiltered groundwater.
D. Metals indicates dissolved metals in filtered groundwater. Samples are generally filtered when turbidity is greater than 10 Nephelometric Turbidity Units (NTU). All values are presented in milligrams per liter (mg/L)

Appendix A

RFI Summary Matrix

Appendix A
RFI Phase 2 Summary Matrix (rev. February 2014)
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Investigation Area	Subarea	Associated AOI	AOI Summary	RFI Phase 1 Investigation	RFI Phase 2 Investigation Sequence/Results	RFI Phase 2 Supplemental Investigation Sequence/Results	Constituents of Concern > PART 201 RBSLs								Summary of Exceedances	Potential Corrective Measures
							VOCs				SVOCs	PCBs	Metals			
							CVOCs	BTEX	1,4-Dioxane	Other VOCs			CrVI	Other		
Lower 1,4-Dioxane Plants 2, 3, & 6	NA	AREA 11 (AOI ID 3-54)	South of the "Coliseum," a 15-20 ft deep subfloor pit where automotive stamping equipment was formerly housed (Building 304 and 305 press pit operations), Plume extends southeast under Saginaw Ave onto Plant 2, terminating just before the western branch of Plant 6.	No investigation activities were conducted during Phase 1.	During routine groundwater monitoring, elevated concentrations of 1,4-dioxane were encountered in a deep overburden well (MW-12-21) installed south of the Coliseum in Area 11. Resampling confirmed that the results were not a lab error.	**March to April** **Scope:** Based on the high concentration of 1,4-dioxane encountered in deep overburden well MW-12-21, one bedrock well (MW-13-28) and nine deep overburden wells were installed in the southwestern portion of Plant 3 to define the vertical and horizontal extent of the impacts. Deep overburden wells were drilled to the bedrock interface and sampled before the permanent well was set at a depth consistent with the impacts encountered at MW-12-21. **Results:** The plume was delineated horizontally to the north and west. 1,4-dioxane was not encountered in bedrock. Elevated concentrations of 1,4-dioxane were encountered in wells installed southeast of MW-12-21. **July to August** **Scope:** Based on the results of the March and April well installation, VAP borings were advanced at Plants 2 & 3 to delineate the vertical and horizontal extent of the plume. 4 VAP borings were advanced at Plant 3 and 17 VAP borings were advanced at Plant 2 following the 1,4-dioxane impacts. Samples were collected from the deep overburden where groundwater was encountered and from the weathered bedrock. **Results:** The plume was delineated horizontally in Plant 3 and to the east and west in the northern portion of Plant 2. Elevated concentrations of 1,4-dioxane were encountered in the deep overburden at Plant 2 continuing southeast. **October to November** **Scope:** Based on the results of the July and August VAP sampling, additional VAP borings were advanced at Plants 2 & 6 to delineate the vertical and horizontal extent of the plume. 8 VAP borings were advanced at Plant 2 and 4 VAP borings were advanced at Plant 6 following the 1,4-dioxane impacts. Samples were collected from the deep overburden where groundwater was encountered and from weathered bedrock. 4 bedrock and 9 deep overburden wells were installed across Plants 2, 3, & 6 to provide permanent monitoring locations for the lower plume. **Results:** The plume was delineated horizontally and vertically across Plants 2, 3, and 6.			X	X				X	GW: 1,4-dioxane & VOCs > DW Metals > DW	1) Restrict potable use of groundwater on-site. 2) Capping of coliseum 3) Source Treatment 4) Pump & Treat / Directed Groundwater Recirculation
AREA 1	NA	AOI 2-16	Two 20,000-gallon tanks that stored gasoline and diesel east of Building 250. One 1,500-gallon tank that stored used oil located southeast of Building 250. One 12,000-gallon tank that stored heating oil located west of Building 250. All USTs removed in 1990 and 1991. Closure report submitted on 10/01/1996. Restrictive Covenant filed with Register of Deeds in 2003.	**Phase 1 Scope:** Collected samples from monitoring wells MW-01(2), MW-02(2), and MW-03(2). **Results:** MTBE detected below MDEQ Part 201 Criteria. Copper and manganese detected above DWC and/or GSI Criteria in two of the three samples.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to a depth of 25 ft bgs around MW-01(2) to assess low-level VOCs and metals in soil and groundwater. Soil samples were collected at approximate 10 ft intervals through vadose zone based on field screening results. Groundwater samples were collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to 50 ft bgs to characterize the stratigraphy and define groundwater impacts vertically. **Results:** VOCs detected in soil below Part 201 Criteria. VOCs detected in groundwater exceeding Part 201 Criteria. VOC, SVOC and metal exceedances delineated vertically. **II. Characterization** **Scope:** Three additional step-out soil borings completed, two north of the area and one to the west, to 20 ft bgs to delineate soil and groundwater impacts horizontally. Soil sampled at approximate 5 ft intervals based on field screening. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** VOCs, SVOCs, and metals in soil and groundwater delineated horizontally. **III. Delineation** **Scope:** One monitoring well installed and sampled north of Area to provide a permanent monitoring point for delineation of groundwater impacts. **Results:** Sampling of the four permanent monitoring wells indicates no exceedances of Part 201 Criteria.	COCs defined; no additional work completed		X			X			X	SOIL: SVOCs > GSIP Metals > DWP & GSIP GW: VOCs & SVOCs > GSI Metals > DW & GSI NOTES: Soil and groundwater impacts defined on-site both vertically and horizontally. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site.
AREA 2	NA	AOI 2-12 AOI 2-52 AOI ID 2-26	Empty 55-gallon drums generated from facility operations.	**Phase 1 Scope:** Soil boring P2-SB-31 was advanced to 10 ft bgs, samples collected at highest PID reading interval and deepest interval. **Results:** No VOCs detected. SVOCs detected at 1-2 ft bgs, ND at 9-10 ft bgs. No exceedances of Part 201 Criteria. Cobalt and manganese detected above Soil DWP and GSIP Criteria in both samples.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to a depth of 20 ft bgs to assess SVOCs and metals in soil. Soil was sampled at approximate 10 ft intervals through vadose zone based on field screening results. **Results:** VOCs (PCE) detected in soil exceeding MDEQ Part 201 Criteria, generally between 15 and 20 ft bgs. **II. Characterization** **Scope:** Eight additional step-out soil borings were completed to 30 ft bgs to define VOCs in soil. Soil was sampled at approximate 5 ft intervals through vadose zone. Groundwater sampled from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define VOC impacts vertically in soil and groundwater. VAP boring soil/gw samples collected at approximate 5 ft intervals beginning at 20 ft bgs. **Results:** PCE in soil defined vertically and horizontally. PCE in groundwater exceeding Part 201 Criteria was encountered between the soil impacts and Plant 2 property boundary; BTEX detected in soil and groundwater exceeding MDEQ Part 201 Criteria on east side of Area. **III. Delineation** **Scope:** Seven additional step-out borings completed to 30 ft bgs east and west of Area. Soil was sampled at approximate 5 ft intervals through vadose zone. Groundwater sampled from saturated permeable zones (if encountered). Two soil gas samples collected in the vicinity of benzene soil SVIIC exceedances on east side of Area. Soil borings completed and one monitoring well installed along western property boundary to define PCE in groundwater at property boundary. **Results:** PCE in soil and groundwater completely defined. BTEX in soil and groundwater appears to merge with impacts from adjacent areas (Areas 5-2 and 5-3). Soil gas results did not indicate exceedances of draft risk-based soil gas screening levels.	COCs defined; no additional work completed	X	X		X			X	SOIL: VOCs > DWP, GSIP & SVIIC Metals > DWP, GSIP, DC & PSIC GW: VOCs > DW, GSI, and draft $GW_{VI\text{-}nr}$ Metals > DW NOTES: PCE in soil up to 15,300 µg/Kg (>DWP/GSIP) delineated. PCE in groundwater defined at Site property boundary. Benzene in soil up to 15,300 µg/Kg (>DWP/GSIP/ SVIIC) defined to SVIIC. Benzene and isopropylbenzene in groundwater > draft GWVI-nr. Soil gas sampling indicates soil gas VOCs below draft screening levels. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Exposure barrier for soil DC (As) and PSIC (Mn) exceedances. 3) Require exposure barrier for VI or additional data to show not a concern. 4) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 3	NA	AOI 2-11	Monitoring well P2-MW-03 in northwestern corner of Plant 2 with 1,4-dioxane in groundwater	**Phase 1 Scope:** Installed permanent monitoring well P2-MW-03 to assist with horizontal gradient determination. Soil samples collected at ground surface, 20 ft bgs, and bottom of boring. Groundwater samples collected following installation. **Results:** VOCs, SVOCs, and metals < Part 201 Criteria in soil. In groundwater, 1,4-dioxane and manganese detected above Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, one HPT/VAP boring was completed to bedrock (or refusal) to characterize the stratigraphy and define groundwater impacts vertically. Groundwater sampled at 30 ft bgs. Groundwater not encountered from 30 feet to bedrock. **Results:** 1,4-Dioxane and metals arsenic and manganese concentrations exceeding Part 201 Criteria encountered in VAP sample; 1,4-dioxane exceeds proposed DWC of 8.5 µg/L. Impacts suspected to be associated with former Adam's Plating Company located 300 feet west of Area 3.	COCs defined; no additional work completed			X				X	GW: 1,4-dioxane > Proposed DW (8.5 µg/L) Metals > DW & GSI NOTES: 1,4-Dioxane at this location associated with Former Adam's Plating Facility.	1) Restrict potable use of groundwater on-site.

RFI Phase 2 Summary Matrix (rev. February 2014)
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Investigation Area	Subarea	Associated AOI	AOI Summary	RFI Phase 1 Investigation	RFI Phase 2 Investigation Sequence/Results	RFI Phase 2 Supplemental Investigation Sequence/Results	Constituents of Concern > PART 201 RBSLs								Summary of Exceedances	Potential Corrective Measures
							VOCs				SVOCs	PCBs	Metals			
							CVOCs	BTEX	1,4-Dioxane	Other VOCs			CrVI	Other		
AREA 4	NA	AOI 2-8	Likely stored waste paint, spent solvent, and used oils on a concrete pad.	**Phase 1 Scope:** Soil boring P2-SB-33 was advanced to 10 ft bgs, with samples collected at 5 ft intervals. **Results:** No VOCs detected. SVOCs detected at 5-6 ft bgs, but not at 9-10' bgs (<Part 201 Criteria). Metals < Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to a depth of 25 ft bgs to assess SVOCs in soil. Soil samples were collected at approximate 10 ft intervals through vadose zone based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** Low-level SVOCs delineated vertically and horizontally in soil and groundwater. Boron, cobalt, selenium, silver, and zinc detected in soil exceeding Part 201 Criteria at 1-2 and 10-11 ft bgs. **III. Delineation** **Scope:** One step-out soil boring was completed to 20 ft bgs beyond western Site boundary and sampled for select metals. Soil samples were collected at approximate 10 ft intervals. Groundwater sample collected from saturated permeable zone. **Results:** Metals in soil exceeding Part 201 Criteria defined to the east by borings from neighboring Areas (Areas 5-1 and 5-2). Selenium exceeds GSIP in soils in boring completed across the street. Manganese exceeded the health-based DWC in two groundwater samples.	COCs defined; no additional work completed							X	SOIL: Metals > DWP & GSIP GW: Metals > DW NOTES: Manganese in groundwater is likely due to naturally occurring background concentrations. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site.
AREA 5	5-1	AOI 2-11 AOI ID 2-31 ID 2-32 ID 2-33 ID 2-34 ID 2-35 ID 2-49	Press Pit and Associated Sumps, Pits, and Trenches ID 2-31 - Two 3'x3' oil containment sumps under hydraulic presses ID 2-32 - Two oil containment sumps, 3'x3' and trench ID 2-33 - Two oily waste line manhole sumps ID 2-34 - Two Press Pits ID 2-35 6" deep Tramp Oil trenches, 3' deep Tramp Oil sumps	**Phase 1 Scope:** Four soil borings were advanced to 20 ft bgs, with samples collected at surface, highest PID reading interval, and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** No VOCs detected. Low-level SVOCs detected in soil and groundwater (<Part 201 Criteria). Lead and manganese in GW detected above MDEQ Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, 10 step-out soil borings were completed to 20 ft bgs to assess SVOCs and metals in soil. Soil samples were collected at approximate 10 ft intervals through vadose zone based on field screening results. Groundwater samples were collected from saturated permeable zones (if encountered). Two HPT/VAP borings were completed to bedrock (or refusal) to characterize the stratigraphy and define groundwater impacts vertically. Groundwater samples were collected from saturated permeable zones (if encountered). **Results:** SVOCs detected in soil exceeding Part 201 Criteria between 4-5 ft bgs, delineated vertically. Cobalt, selenium, and silver in soil exceeding Part 201 Criteria delineated vertically. Arsenic, boron, lead detected in groundwater exceeding Part 201 Criteria encountered generally between 10-15 ft bgs across area. Manganese exceeded the health-based DWC in one groundwater sample. SVOCs and metals in soil and groundwater appear to merge with impacts from adjacent areas (Areas 4, 5-2, 5-5, and 8).	**Utility Corridor Investigation** **Scope:** To address potential contaminant migration concerns through the utility corridor, one soil boring was advanced to 10 ft bgsin the vicinity of storm sewer lines northwest of the area. **Results:** VOCs, SVOCs, and metals were not encountered above Part 201 Criteria.			X		X			X	SOIL: SVOCS > DWP, GSIP, & DC Metals > DWP & GSIP GW: VOCs > DW 1,4-dioxane > Proposed DW (8.5 µg/L) & DW SVOCs > DW Metals > DW & GSI NOTES: Manganese in groundwater is likely due to naturally occurring background concentrations. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Exposure barrier for soil DC (PAHs) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 5	5-2	AOI 2-6 AOI 2-14 AOI ID 2-36	ID 2-6 - SWMU 6 - Former Oily Waste Treatment System. Three 10,000-gallon concrete tanks, two treatment tanks, two gravity separators, chemical storage tanks. ID 2-14 - SWMU 14 - Former Scrap Metal Storage Areas. Stored non-hazardous scrap metal (machining chips, turnings, trimmings, and scrap parts). ID 2-26 - Quench Oil Operations, pits, tanks, and sumps. ID 2-36 - Oil Separator and Sump. 10" oily waste line runs to separator. ID 2-52 - Pickling Room. Concrete wall and acid-resistant floor.	**Phase 1 Scope:** Ten soil borings were advanced to an average 20 ft bgs, with samples collected at highest PID reading interval and deepest interval. **Results:** VOCs and SVOCs detected at 0-10 ft bgs, with criteria exceedances at 4-7 ft bgs in two samples. Manganese detected above MDEQ Part 201 Criteria at 2-6 ft bgs in three samples. LNAPL detected at P2-SB-37 temporary well.	**I. Assessment** **Scope:** Based on Phase 1 results, 38 step-out soil borings were completed to a depth of 25 ft bgs to assess VOCs, SVOCs, metals and LNAPL impacts in soil and groundwater. Soil samples were collected at approximate 5 ft intervals through vadose zone based on field screening results. Groundwater samples collected where saturated permeable zones were encountered. Five HPT/VAP borings were completed to bedrock (or refusal) to characterize the stratigraphy and define soil and groundwater impacts vertically. Samples were collected at approximate 5 ft intervals at each VAP boring. LIF borings (51 total) were completed to 30 ft bgs to delineate the NAPL plume. **Results:** VOCs, SVOCs and metals detected in soil and groundwater exceeding Part 201 Criteria generally associated with the LNAPL impacts. Manganese exceeded the health-based DWC in one groundwater sample. PCBs in LNAPL and detected in soil up to 22,000 µg/Kg. Extent of LNAPL defined vertically and horizontally with LIF. A VOC plume, generally 1,4-dioxane, extends from LNAPL plume to the east across Plant 6. **II. Characterization** **Scope:** Two bedrock wells installed near LNAPL plume to verify no impacts to bedrock aquifer. Groundwater samples collected following installation. **Results:** COCs not detected in bedrock above Part 201 Criteria. **III. Delineation** **Scope:** Install nine LNAPL monitoring wells in LNAPL plume as part of LNAPL mobility study and to provide permanent LNAPL monitoring locations. **Results:** Free-phase LNAPL accumulates in most of the wells. LANPL samples and mobility/recoverability testing indicates LNAPL plume is stable (not mobile), with limited recoverability.	COCs defined; no additional work completed	X	X	X	X	X	X	X	SOIL: VOCs > DWP, GSIP, & SVIIC SVOCs > DWP, GSIP, VSIC, & DC PCBs > DC Metals > DWP, GSIP, DC & PSIC GW: VOCs > DW & GSI 1,4-dioxane > Proposed DW (8.5 µg/L) & DW SVOCs > DW, GSI, GC & Sol PCBs > DW, GSI, $GW_{VI\text{-}Ctrl}$, GC & Sol Metals > DW & GSI NOTES: Elevated VOCs, SVOCs, PCBs, and metals associated with LNAPL plume. Manganese in groundwater is likely due to naturally occurring background concentrations. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require an exposure barrier (intact concrete) for soil DC and inhalation exceedances, as well as NAPL. 3) Require an exposure barrier or data indicating that VI is not a concern in this area. 4) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 5	5-3	AOI 2-1 AOI ID 2-59 Misc. Data Gap Borings	Press Pits - 8' - 4" deep, 21' by 35', and 67' by 25'	**Phase 1 Scope:** Five soil borings were advanced to an average 30 ft bgs, with samples collected at highest PID reading interval and deepest interval. **Results:** VOCs detected above MDEQ Part 201 Criteria generally between 5-10 ft bgs. SVOCs and manganese detected above MDEQ Part 201 Criteria on west side of Area between 4-6 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, 17 step-out soil borings were completed to a depth of 20 ft bgs to assess VOCs, SVOCs, and metals in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples were collected from saturated permeable zones (if encountered). Two HPT/VAP borings were completed to bedrock (or refusal) to characterize the stratigraphy and define soil and groundwater impacts vertically. VAP soil/gw samples were collected at approximate 5 ft intervals. **Results:** 1,4-Dioxane detected in groundwater exceeding Part 201 Criteria. VOCs and SVOCs detected in soil exceeding Part 201 Criteria in the southeastern corner of Area. Metals including silver, manganese, arsenic and cobalt detected in soil or groundwater exceeding Part 201 Criteria. **II. Characterization** **Scope:** Three additional step-out soil borings were completed to 30 ft bgs in southeastern corner to delineate VOCs and SVOCs. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** VOCs and SVOCs in soil delineated. 1,4-Dioxane and metals in groundwater appear to merge with impacts to the north and east (Areas 5-2 and 5-5).	COCs defined; no additional work completed	X	X	X	X	X		X	SOIL: VOCs > DWP, GSIP, & SVIIC SVOCs > DWP, GSIP, & DC Metals > DWP, GSIP & PSIC GW: VOCs > GSI 1,4-dioxane > Proposed DW (8.5 µg/L) & DW Metals > DW & GSI NOTES: COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require an exposure barrier (intact concrete) for soil DC (PAHs) and inhalation (Mn) exceedances. 3) Require an exposure barrier or data indicating that VI is not a concern in this area. 4) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 5	5-4	AOI ID 2-39	Fuel Oil Pump House and Tank Farm - Eight oil storage tanks, 10.5' diameter. Trenching associated with tanks. Three truck unloading stations associated with tanks.	**Phase 1 Scope:** Three soil borings were advanced to an average of 20 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** Low-level VOCs encountered between 4-5 ft bgs (<Part 201 Criteria) in soil. No VOCs or SVOCs encountered in groundwater.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to a depth of 20 ft bgs to assess low-level VOCs in soil. Soil sampled at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** All VOC and SVOC concentrations less than Part 201 Criteria. Arsenic detected in grounwater exceeding the Part 201 Criteria.	**Utility Corridor Assessment** **Scope:** To address potential contaminant migration concerns through the utility corridor, two soil borings were advanced to 10 ft bgs northwest of the area and in the northwestern corner of the area in the vicinity of storm sewer lines. **Results:** VOCs and metals were not encountered above Part 201 GSI Criteria. bis(2-ethylhexyl)phthalate was detected above Part 201 Criteria in one boring; however, this is believed to be a lab contaminant.							X	GW: Metals > DW & GSI NOTES: COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site.

Appendix A
RFI Phase 2 Summary Matrix (rev. February 2014)
RACER Trust Plants 2, 3 and 6 - Lansing, Michigan

Investigation Area	Subarea	Associated AOI	AOI Summary	RFI Phase 1 Investigation	RFI Phase 2 Investigation Sequence/Results	RFI Phase 2 Supplemental Investigation Sequence/Results	Constituents of Concern > PART 201 RBSLs								Summary of Exceedances	Potential Corrective Measures
							VOCs				SVOCs	PCBs	Metals			
							CVOCs	BTEX	1,4-Dioxane	Other VOCs			CrVI	Other		
AREA 5	5-5	AOI 2-15	AOC 1 - Building 225 UST Farm - Two 20,000-gallon tanks that stored gasoline and diesel east of Building 250. One 1,500-gallon tank that stored used oil located southeast of Building 250. One 12,000-gallon tank that stored heating oil located west of Building 250. All USTs removed in 1990 and 1991. Closure report submitted on 10/01/1996. Restrictive Covenant filed with Register of Deeds in 2003.	**Phase 1 Scope:** Two soil borings were advanced to 20 ft bgs, with samples collected at highest PID interval and deepest interval. Permanent monitoring well P2-MW-04 was installed and sampled at surface and deepest interval. Groundwater samples collected following installation. **Results:** 1,4-Dioxane and manganese in GW exceeding MDEQ DW Part 201 Criteria encountered in groundwater. SVOCs, VOCs, and arsenic exceeding MDEQ Part 201 Criteria encountered in soil generally between 1-3 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, nine step-out soil borings were completed to a depth of 20 ft bgs to assess VOCs, SVOCs, and metals in soil. Soil samples were collected at approximate 5 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) in the vicinity of the permanent monitoring well to characterize the stratigraphy and define soil and groundwater impacts vertically. VAP soil/gw samples were collected at approximate 5 ft intervals. **Results:** 1,4-Dioxane detected in groundwater exceeding Part 201 Criteria in the VAP boring. Arsenic detected in groundwater exceeding Part 201 Criteria along eastern Area boundary adjacent to railroad tracks. VOCs and metals arsenic, cobalt, and manganese defined vertically and appear to merge with impacts in adjacent areas (Area 5-2, 5-6).	COCs defined; no additional work completed	X	X	X	X	X	X		X	SOIL: VOCs > DWP SVOCs > GSIP & DC Metals > DWP, GSIP & PSIC GW: 1,4-dioxane > Prop DW (8.5 µg/L) SVOCs > DW Metals > DW & GSI NOTES: Manganese in groundwater is likely due to naturally occurring background concentrations. Manganese exceedance of the PSIC is deep (56-57') and therefore, is not a concern, as soil this deep is not likely to be brought to the surface. COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (PAHs) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 5	5-6	AOI 6-18 AOI 6-48	AOC 1 - Building 225 UST Farm - Eight former 30,000-gallon tanks. Removed 1989. Closure report submitted 10/1/96.	**Phase 1 Scope:** Two soil borings were advanced to 10 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples were collected from saturated permeable zones (if encountered). Groundwater samples were also collected at seven permanent monitoring well locations. **Results:** 1,4-Dioxane, VOCs, and metals lead and arsenic exceeding Part 201 Criteria encountered in groundwater. Low-level VOCs and SVOCs encountered in soil (<Part 201 Criteria). Manganese exceeding Part 201 Criteria encountered in soil throughout.	**I. Assessment** **Scope:** Based on Phase 1 results, 15 step-out soil borings were completed to an average depth of 15 ft bgs to assess impacts in soil and groundwater. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). Six HPT/VAP borings were completed to bedrock (or refusal) in the vicinity of permanent monitoring wells to characterize the stratigraphy and define soil and groundwater impacts vertically. VAP boring soil/gw samples collected at approximate 10 ft intervals. **Results:** 1,4-Dioxane detected in groundwater exceeding Part 201 Criteria in three VAP borings at 35-40 ft bgs, defined vertically and merge with groundwater impacts in adjacent areas. VOCs detected in groundwater exceeding Part 201 Criteria defined vertically. VOCs detected in soil exceeding Part 201 Criteria defined vertically and by adjacent areas. Arsenic, barium, cadmium, cobalt, copper, lead, manganese, mercury, selenium, silver, and zinc detected in soil exceeding Part 201 Criteria at 0-7 ft bgs, delineated vertically and generally merge with impacts in adjacent areas. Manganese detected above the health-based DWC in 3 groundwater samples.	**Bedrock Well Replacement** **Scope:** Arsenic, cobalt, lead, and vanadium encountered in groundwater at historic bedrock well MW-04-04 historically exceeded Part 201 DW Criteria; however, the well was damaged and had been removed from routine monitoring. The original MW-04-04 was replaced by a new bedrock well [MW-04-04(R)] at the same approximate location with a total depth of 110 ft bgs and routine monitoring was reinstated. **Results:** Total and dissolved arsenic were detected in groundwater above Part 201 Criteria. Other metals were detected but did not exceed Part 201 Criteria.	X	X	X	X	X			X	SOIL: VOCs > DWP & GSIP Metals > DWP, GSIP, & DC GW: VOCs > DW & GSI 1,4-dioxane > Prop DW (8.5 µg/L) Metals > DW & GSI NOTES: Manganese in groundwater is likely due to naturally occurring background concentrations. Only COC detected in Plant 6 storm sewer samples above GSI criteria was selenium, which was not detected in gw above GSI criteria in Area 5-6.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (lead) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 5	5-7	AOI 6-43 AOI 6-88	ID 6-43 - Stormceptor - Includes stormceptor oil and sediment separator ID 6-88 - Parking Lot Exceedance	**Phase 1 Scope:** Four soil borings were advanced to 10 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples were collected from saturated permeable zones (if encountered). Groundwater samples were also collected at four permanent monitoring well locations. **Results:** BTEX exceeding MDEQ Part 201 Criteria encountered in groundwater and soil at 7-10 ft bgs. Low-level SVOCs encountered in all borings (<Part 201 Criteria). Metals antimony and cadmium encountered in soil exceeding Part 201 Criteria between 5-7 ft bgs. Metals lead and antimony encountered in groundwater above Part 201 Criteria throughout Area.	**I. Assessment** **Scope:** Based on Phase 1 results, eight step-out soil borings were completed to an average depth of 20 ft bgs to assess VOCs and metals in soil and groundwater. Soil samples were collected at approximate 5 ft to 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). Three HPT/VAP borings were completed to bedrock (or refusal) to characterize the stratigraphy and define soil and groundwater impacts vertically. VAP soil/gw samples were collected at approximate 5 ft intervals. **Results:** VOCs (BTEX) detected in groundwater exceeding Part 201 Criteria delineated to the north. Vinyl chloride detected in groundwater exceeding Part 201 Criteria at eastern property boundary. BTEX detected in soil exceeding Part 201 Criteria delineated vertically and horizontally. TCE detected in soil exceeding Part 201 Criteria (including SVIIC) at 11-12 ft bgs. Metals cobalt, arsenic, antimony, and silver detected in soil and/or groundwater exceeding Part 201 Criteria delineated to the north, and appear to merge with impacts to the south and west (Areas 5-5 and 5-6). **II. Characterization** **Scope:** Seven additional step-out soil borings were completed to 30 ft bgs to delineate TCE in soil. Soil samples were collected at approximate 5 ft to 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** TCE detected in soil exceeding Part 201 Criteria, delineated vertically and horizontally. **III. Delineation** **Scope:** Two additional step-out soil borings were completed off-Site to 30 ft bgs to delineate vinyl chloride in groundwater. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). Two monitoring wells installed north and east of Area to provide permanent monitoring locations for groundwater impacts. **Results:** Vinyl chloride in perched groundwater delineated horizontally. Vinyl chloride below Part 201 Criteria and lead above Part 201 Criteria present in bedrock monitoring well at property boundary. Manganese detected above the health-based DWC in 1 groundwater sample.	**Bedrock Well Replacement** **Scope:** Lead encountered in groundwater at historic bedrock well MW-04-06 historically exceeded Part 201 DW Criteria; however, the well was damaged and had been removed from routine monitoring. The original MW-04-06 was replaced by a new bedrock well [MW-04-06(R)] at the same approximate location with a total depth of 99.5 ft bgs, and routine monitoring was reinstated. **Results:** Total and dissolved arsenic and manganese were detected in groundwater above Part 201 Criteria. Other metals were detected but did not exceed Part 201 Criteria.	X	X		X	X			X	SOIL: VOCs > DWP, GSIP, SVIIC, & VSIC Metals > DWP & GSIP GW: VOCs > DW, GSI & $GW_{VI\text{-}nr}$ SVOCs > GSI 1,4-dioxane > Proposed DW (8.5 µg/L) Metals > DW & GSI NOTES: TCE in soil up to 12,000 µg/Kg (>DWP/GSIP/SVIIC/VSIC) delineated. TCE does not exceed the VSIC for a 1/2-acre source area. Therefore, not likely a concern for ambient air inhalation. Only COC detected in Plant 6 storm sewer samples above GSI criteria was selenium, which was not detected in gw above GSI criteria in Area 5-7. Manganese in groundwater is likely due to naturally occurring background concentrations. Propose to replace damaged/destroyed bedrock wells MW-04-06 and MW-04-04(6) to determine if metals are present in deep groundwater above DW criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for VI or additional data to show not a concern.
AREA 5	5-8	AOI 6-49 AOI 6-81	Former Paint Shop Area	**Phase 1 Scope:** Three soil borings were advanced to an average 10 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples were collected from saturated permeable zones (if encountered). **Results:** Low-level VOCs detected in groundwater below Part 201 Criteria. Metals lead and arsenic detected in groundwater exceeding Part 201 Criteria. No VOCs, SVOCs, or metals exceedances detected in soil.	**I. Assessment** **Scope:** Based on Phase 1 results, two HPT/VAP borings were completed to bedrock (or refusal) to characterize the stratigraphy and define groundwater impacts vertically. Soil samples were collected at approximate 15 ft intervals. **Results:** 1,4-Dioxane detected in groundwater exceeding proposed 8.5 µg/L DWC defined vertically. **II. Characterization** **Scope:** Two additional step-out soil borings were completed to 20 ft bgs north and east of the Area to delineate VOCs and metals in soil and groundwater. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** Metals in soil and groundwater delineated vertically and horizontally. **III. Delineation** **Scope:** Two monitoring wells installed north and east of Area adjacent to Characterization stage soil borings to provide permanent monitoring points for groundwater impacts. **Results:** Sampling of the two permanent monitoring wells indicates no exceedances of Part 201 Criteria. 1,4-Dioxane delineated at property boundary.	**Utility Corridor Assessment** **Scope:** To address potential contaminant migration concerns through the utility corridor, two soil borings were advancedto 10 ft bgs north of the area and in the southeast corner of the area, in the vicinity of storm sewer lines. **Results:** Both borings were dry. **Off-Site Metals Assessment** **Scope:** To define metals in groundwater east of Plant 6, one shallow monitoring well (MW-13-36R) was installed to a depth of 10.5 ft bgs. **Results:** Vanadium in groundwater was detected exceeding Part 201 DW Criteria			X	X	X			X	SOIL: Metals > GSIP & PSIC GW: 1,4-dioxane > Proposed DW (8.5 µg/L) Metals > DW & GSI NOTES: 1,4-dioxane in groundwater delineated. Only COC detected in Plant 6 storm sewer samples above GSI criteria was selenium, which was not detected in gw above GSI criteria in Area 5-8. Manganese (historical sample) does not exceed PSIC for a 5-acre source area, not likely a concern for this pathway. Additional groundwater sampling will be completed at P6-SB-35 to determine if additional work is required to delineate vanadium in GW above DW criteria.	1) Restrict potable use of groundwater on-site. 2) Off-site groundwater use restriction

Groundwater samples were collected from two permanent monitoring wells. **Results:** 1,4-Dioxane detected in groundwater exceeding Part 201 Criteria. No VOCs or SVOCs were detected in soil/gw.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to an average 25 ft bgs to assess VOCs and SVOCs in soil and delineate VOCs in groundwater. Soil samples were collected approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define soil and groundwater impacts vertically. VAP soil/gw samples were collected at approximate 10 ft intervals. **Results:** 1,4-Dioxane in groundwater delineated horizontally. VOCs and SVOCs less than Part 201 Criteria.	COCs defined; no additional work completed			X	X					GW: 1,4-dioxane > Prop DW (8.5 µg/L) NOTES: 1,4-dioxane in groundwater delineated.	1) Restrict potable use of groundwater on-site.
AREA 7	NA	AOI 6-17 AOI 6-47	ID 6-17 - AOC 2 - Tanks 1 (SWMU 4) and 3 (SWMU 8) - Tank 1: 7,500-gallon carbon steel virgin thinner storage tank; Tank 3: 12,000-gallon carbon steel virgin thinner storage tank ID 6-47 - Leaking Industrial Waste Line	**Phase 1 Scope:** Three soil borings were advanced to 20 ft bgs, with samples collected at the highest PID interval. Permanent monitoring well P6-MW-01 was installed to 25 ft bgs, with samples collected at surface, highest PID interval, and deepest interval. Groundwater was sampled following installation. Groundwater samples were also collected at seven permanent monitoring wells. **Results:** BTEX detected in groundwater and soil exceeding Part 201 Criteria. VOCs and SVOCs detected in soil and groundwater below Part 201 Criteria. Metals arsenic, vanadium, and lead detected in groundwater exceeding Part 201 Criteria. Metals detected in soil below Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, eight step-out soil borings were completed to an average depth of 20 ft bgs to assess VOCs and metals in soil and groundwater. Soil samples were collected at approximate 5 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define soil and groundwater impacts vertically. Samples were collected at approximate 5 ft to 10 ft intervals. **Results:** BTEX in groundwater delineated vertically and horizontally to the east. BTEX detected in soil exceeding Part 201 Criteria between 5-15 ft bgs, delineated vertically. SVOCs detected in soil exceeding Part 201 Criteria at surface, delineated vertically. SVOCs in groundwater delineated vertically and horizontally. **II. Characterization** **Scope:** Two additional step-out soil borings advanced to 30 ft bgs define BTEX and SVOCs in soil. Soil samples were collected at approximate 5 ft intervals based on field screening results. **Results:** BTEX in soil exceeding Part 201 Criteria delineated to the north. SVOCs detected in soil below Part 201 Criteria delineated to the north and east. High concentrations of BTEX identified on southern property boundary above SVIIC Criteria. **III. Delineation** **Scope:** Four additional step-out soil borings advanced to 30 ft bgs off-Site south of Area to delineate VOCs, SVOCs, and metals in soil and groundwater. Two soil gas samples collected in the vicinity of BTEX SVIIC exceedances. Two monitoring wells were installed south of property boundary to provide permanent monitoring points for delineation of metals. **Results:** BTEX and SVOCs in soil and groundwater delineated vertically and horizontally. Metals detected in soil exceeding Part 201 Criteria delineated vertically and horizontally. Vanadium, lead and arsenic detected in groundwater above Part 201 Criteria south of Plant 6. Soil gas results did not indicate exceedance of risk-based soil gas screening levels.	**Utility Corridor Assessment** **Scope:** To address potential contaminant migration concerns through the utility corridor, one soil boring wasadvanced to 10 ft bgs in the vicinity of storm sewer lines west of the area. **Results:** VOCs, SVOCs, and metals were not encountered above Part 201 Criteria. **Plant 6 Off-Site Metals Assessment** **Scope:** To define metals in groundwater south of Plant 6, one shallow monitoring well (MW-13-35) was installed to a depth of 30 ft bgs. **Results:** Vanadium in groundwater was detected exceeding Part 201 DW Criteria.		X		X	X			X	SOIL: VOCs > DWP, GSIP, SVIIC, DC, GCP & Csat SVOCs > GSIP & DC Metals > GSIP GW: VOCs > DW & GSI SVOCs > DW Metals > DW & GSI NOTES: Total Xylenes in Soil up to 472,000 µg/Kg (>DWP/GSIP/SVIIC/DC/Csat) delineated. Concentrations of Xylenes do not exceed the risk-based SVIIC, GCP, or DC criteria. Metals in groundwater encountered off-site above DW criteria. Soil gas results below draft MDEQ soil gas screening levels. Manganese in groundwater is likely due to naturally occurring background concentrations. Does not exceed off-site. Proposing additional sampling south of Area 7 to define the extent of metals above criteria in	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for VI or additional data to show not a concern. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover). 4) Off-site groundwater use restriction
AREA 8	NA	AOI 2-7 AOI ID 2-37 AOI ID 2-38	ID 2-7 - Paint Shop Sumps and Trenches - Three sumps are 3'x3'x3' each ID 2-37 - Press Pits. Concrete press pits. One sump associated with presses. ID 2-38 - Scrap Steel Operations Pits. Scrap Steel Pits, 8' Deep. Scrap Pit oily waste sump	**Phase 1 Scope:** Four soil borings were advanced to an average 20 ft bgs, with samples collected at the highest PID interval and the deepest interval. Permanent monitoring well P2-MW-01 was installed and sampled at surface, highest PID interval, and EOB. Groundwater samples were collected following installation. **Results:** Low-level VOCs encountered in soils between 2-5 ft bgs (<Part 201 Criteria). SVOCs detected in soil exceeding Part 201 Criteria at one location at 3-4 ft bgs. No VOCs or SVOCs encountered in groundwater Metals barium and manganese encountered in groundwater above Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, nine step-out soil borings were completed to an average depth of 15 ft bgs to assess VOCs and SVOCs in soil. Soil samples were collected at approximate 5 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones. **Results:** VOCs in soil and GW and SVOCs in GW do not exceed Part 201 Criteria. SVOCs in soil above Part 201 Criteria defined vertically and horizontally. Metals in soil and groundwater exceeding Part 201 Criteria defined vertically and to the north, and appear to merge with impacts from Area 5-2 to the south.	COCs defined; no additional work completed					X			X	SOIL: SVOCs > DWP & GSIP Metals > DWP & GSIP GW: SVOCs > GSI Metals > DW & GSI NOTES: COCs not detected in Plant 2 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site.
AREA 9	NA	AOI 6-60 Misc data gap	Paint Mix Room	**Phase 1 Scope:** Five soil borings were advanced to an average 20 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** VOCs in soil and groundwater exceeding Part 201 Criteria encountered generally between 4-12 ft bgs. SVOCs encountered in soil below Part 201 Criteria at 1-2 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, 11 step-out soil borings were completed to an average 20 ft to 30 ft bgs to assess VOCs in soil and groundwater. Soil samples were collected at approximate 5 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define soil impacts vertically. VAP boring soil/gw samples were collected at 5 ft intervals. **Results:** VOCs in groundwater exceeding Part 201 Criteria defined vertically. VOCs detected in soil exceeding Part 201 Criteria defined vertically and horizontally to the south and east. SVOCs detected in soil exceeding Part 201 Criteria defined vertically and horizontally to the east. **II. Characterization** **Scope:** One additional step-out soil boring was completed to 30 ft bgs north of Assessment stage borings to delineate VOCs and SVOCs in soil and groundwater. Soil samples were collected at approximate 5 ft intervals based on field screening results. One additional HPT/VAP boring was completed to bedrock (or refusal) to the east of the Area to delineate VOCs in groundwater. VAP groundwater samples collected at 10 ft intervals or where saturated permeable zones were encountered. **Results:** VOCs and SVOCs in soil defined vertically. VOCs not defined to north and west of area before railroad ROW, but are defined by adjacent areas interior to the Site. 1,4-Dioxane encountered in groundwater east of Area exceeding proposed 8.5 ug/L DWC.	COCs defined; no additional work completed	X	X	X	X	X			X	SOIL: VOCs > DWP, GSIP, SVIIC, GCP, DC & Csat SVOCs > DWP, GSIP, VSIC, & DC GW: VOCs > DW, GSI, $GW_{VI\text{-}nr}$ & FESL SVOCs > GSI Metals > DW & GSI NOTES: BTEX in groundwater up to 181,000 µg/L. Xylenes exceed the FESL in groundwater. BTEX in soil up to 651,000 µg/Kg delineated. Concentrations of ethylbenzene and xylenes do not exceed the risk-based SVIIC, GCP, or DC criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for soil DC (PAHs). 3) Require exposure barrier for VI or data indicating that VI is not a concern. 4) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).

AREA 10	NA	AOI 6-19 AOI 6-63 AOI 6-82	ID 6-48 - Former Coal Pile ID 6-82 - Former Coal Chute Building. Basement filled with water at the time of the site walkthrough ID 6-19 - Process Waste Tunnel. Runs underneath Buildings 28 and 21; exits Site to the west and continues to GM Lansing Plant 2	**Phase 1 Scope:** Three soil borings were advanced to an average depth of 20 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** SVOCs, VOCs and Metals detected in soil <Part 201 Criteria. Groundwater < Part 201 Criteria	**I. Assessment** **Scope:** Based on Phase 1 results, five step-out soil borings were completed to an average 20 ft bgs to assess VOCs, SVOCs and metals in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and assist with site-wide groundwater delineation. VAP samples were collected where saturated permeable zones were encountered. **Results:** VOCs not encountered in groundwater. Manganese detected in groundwater exceeding aesthetic DWC but not health-based DWC. VOCs and SVOCs detected in soil below non-residential Part 201 Criteria (but above residential DC Criteria for benzo(a)pyrene). **II. Characterization** **Scope:** Three additional step-out soil borings were completed to 30 ft bgs to define SVOCs in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** SVOCs in soil defined vertically and horizontally..	COCs defined; no additional work completed							X	SOIL: Metals > GSIP & PSIC NOTES: Only COC detected in Plant 6 storm sewer samples above GSI criteria was selenium, which was not detected in gw above GSI criteria in Area 10. Manganese (historical sample) exceeded the PSIC for a 100-acre source, but not a 5-acre source. Therefore, likely not a concern for the Site.	1) Restrict potable use of groundwater on-site.
AREA 11	NA	AOI ID 3-54	Sump - Sump pit with sump pump, unknown use	**Phase 1 Scope:** Three soil borings were advanced to an average depth of 20 ft bgs, with samples collected at highest PID interval and deepest interval. **Results:** VOCs, SVOCs, and metals detected in soil below Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, eight step-out soil borings were completed to an average 15 ft bgs to assess impacts in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One HPT/VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define impacts in soil/gw vertically. VAP soil/gw samples were collected at 10 ft intervals. **Results:** VOCs and SVOCs detected in soil exceeding Part 201 Criteria. 1,4-Dioxane and other VOCs detected in groundwater exceeding Part 201 Criteria. SVOCs detected in groundwater below Part 201 Criteria. **II. Characterization** **Scope:** Ten additional step-out soil borings completed to an average 30 ft bgs to define VOCs in soil and groundwater. Soil samples were collected at approximate 5 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** VOCs, SVOCs in soil and groundwater defined horizontally. VOCs detected in soil exceeding Part 201 Criteria appear to terminate at "coliseum" foundation wall to the north, or otherwise merge with Area 21. Deep groundwater samples not collected at VAP boring due to low-permeability saturated formation. **III. Delineation** **Scope:** Monitoring well MW-12-21 installed to provide a permanent monitoring point for delineation of groundwater impacts. **Results:** 1,4-dioxane detected at MW-12-21 in deep overburden above Part 201 Criteria. Follow-up work required for deep overburden characterization.	COCs defined; no additional work completed	X	X	X						SOIL: VOCs > DWP, GSIP, & SVIIC SVOCs > GSIP Metals > DWP & GSIP GW: VOCs > DW & GSI 1,4-dioxane > Proposed DW (8.5 µg/L) & DW Metals > DW NOTES: 1,4-dioxane up to 460 µg/L (>Proposed DW/DW) encountered at 75 ft bgs near Coliseum. Additional sampling will be conducted to determine the extent of 1,4-dioxane in deep overburden. COCs not detected in Plant 3 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for VI or data showing conditions acceptable for VI.
AREA 12	NA	MW-04-02 (TD=132.7') MW-04-03 (TD=88.25')	Vinyl chloride detected above DW Criteria in deep overburden and bedrock	**Phase 1 Scope:** Permanent monitoring wells MW-04-02(3) and MW-04-03(3) were sampled. **Results:** Vinyl chloride detected in groundwater exceeding Part 201 Criteria.	**II. Characterization** **Scope:** One step-out soil boring was completed to 20 ft bgs to characterize metals between property boundary and neighboring Area to the east (Area 14). Soil samples were collected at approximate 10 ft intervals based on field screening results. **Results:** Metals in soil samples < Part 201 Criteria. Vinyl Chloride and other VOCs in bedrock on northwestern portion of Plant 3 believed to originate from off-site source.	**Utility Corridor Assessment** **Scope:** To address potential contaminant migration concerns through the utility corridor, two soil borings were advanced to 20 ft bgs in the vicinity of storm sewer lines. **Results:** Boring was dry. **Historic Arsenic Resampling** **Scope:** Based on historic arsenic concentrations in soil esceeding Part 201 Criteria, one soil boring was advanced to 25 ft bgs in the vicinity of the historic exceedance. **Results:** Arsenic was not detected exceeding Part 201 Criteria.	X								GW: VOCs > DW	1) Restrict potable use of groundwater on-site.
AREA 13	NA	Background Sample	PCBs detected at P3-SB-3 @ 15'-16'	**Phase 1 Scope:** Soil boring P3-SB-03 was advanced to 30 ft bgs and sampled at 10 ft intervals. **Results:** No VOCs or SVOCs detected. PCBs detected in soil at 15-16 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to 20 ft bgs to assess PCBs in soil. Soil samples were collected at approximate 10 ft intervals. **Results:** PCBs defined in soil.	COCs defined; no additional work completed									NOTES: No constituents exceed RBSLs	1) Restrict potable use of groundwater on-site.
AREA 14	NA	AOI 3-10 Misc. Data Gap Borings	AOC 4 - Former Electroplating Area - (1) Electroplating operations (2) New and Reworked Storage Tanks, Chromic Acid Reclaim, 7' diameter by 9' tall (3) 17 Acid Copper Plating Tanks (4) Sludge Sump Under Nickel Storage Tank, 1,350 Gallons (5) 3 Washwater Tanks (1,900-gallons each) in Plating Area (6) Nickel Plating Tanks 1, 2, 3, 4, 6, 7, 8, and 9 (7) Copper Buffing Wash and Rinse Tanks (8) Bumper Plating Sumps (9) Dur'ni Nickel Operations Area, Tanks, Sumps, and Drain Deck	**Phase 1 Scope:** Six soil borings were advanced to an average 25 ft bgs and sampled at highest PID interval and deepest interval. Two permanent monitoring wells were sampled. **Results:** VOCs not detected in soil/gw. SVOCs detected in soil below Part 201 Criteria. SVOCs not detected in groundwater. Metals in soil below Part 201 Criteria. Metals boron, arsenic, and hexavalent chromium detected in perched groundwater exceeding Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase I results, 14 step-out soil borings were completed to an average 15 ft bgs to assess extent of metals in soil and perched water Soil samples were collected at approximate 5 ft intervals. Groundwater samples were collected from saturated permeable zones (if encountered). Three VAP borings were completed in Area to bedrock (or refusal) to characterize stratigraphy and define metal impacts in soil and groundwater. VAP soil/gw samples were collected at 5 ft intervals. **Results:** Hexavalent chromium defined vertically and horizontally in perched zone and appears limited in extent. Additional metals detected in soil and groundwater exceeding Part 201 Criteria defined vertically and horizontally, appearing to merge with impacts from Areas to the east (Areas 17 and 18).	**Historic Arsenic Resampling** **Scope:** Based on historic arsenic concentrations in soil exceeding Part 201 Criteria, one soil boring was advanced to 25 ft bgs west of the area, in the vicinity of the historic exceedance. **Results:** Arsenic was not detected exceeding Part 201 Criteria. **Vinyl Chloride Source Assessment** **Scope:** To verify whether vinyl chloride source mass is located on-Site, two bedrock well (MW-13-37 and MW-13-38) were installed in the central and northeastern portions of the area, and two deep overburden wells (MW-13-40 and MW-13-41) were installed north and east of the area. **Results:** Vinyl chloride was not detected in any of the wells. 1.4-dioxane was encountered in MW-13-41, but is delineated by surrounding wells.							X	X	SOIL: Metals > DWP, GSIP, DC & PSIC GW: Metals > DW & GSI NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria. Arsenic exceeds the DC in the northern portion of Area 14 at a depth of 43.5-45 feet bgs. Due to the depth of the exceedance, exposure is not likely. Nickel and total chromium (as hexavalent chromium) exceeded the PSIC for a 100-acre source area. Exceedances for both were located within a 1/2-acre area. Nickel did not exceed the PSIC for a 1/2-acre. Total chromium did; however, all but one location is under quality concrete. Additional work will be completed to determine the extent of metals impacts in soil. Additional groundwater samples will be collected from deep overburden wells MW-91-2, MW-02-04 and MW-04-04 with an emphasis on low turbidity sampling to verify the presence of	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for the total chromium PSIC exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).

							CVOCs	BTEX	1,4-Dioxane	Other VOCs			CrVI	Other		
AREA 15	NA	AOI ID 3-15	Oil Sump for Crank Shaft Operations	**Phase 1 Scope:** Soil boring P3-SB-26 was advanced to 20 ft bgs and sampled at highest PID interval and deepest interval. **Results:** VOCs and SVOCs detected in soil below Part 201 Criteria between 6-12 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to 20 ft bgs to assess VOC impacts in soil and groundwater. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** 1,4-Dioxane and SVOCs detected in perched groundwater exceeding Part 201 Criteria. SVOCs and selenium detected in soil exceeding Part 201 Criteria. **II. Characterization** **Scope:** Two additional step-out borings were completed to 20 ft bgs to define VOCs and SVOCs in soil and groundwater to the west and south Soil samples were collected at approximate 10' intervals. Groundwater samples were collected from saturated permeable zones (if encountered). **Results:** SVOCs and selenium in soil delineated. SVOCs and 1,4-dioxane in groundwater water appears localized and delineated by dry zones.	COCs defined; no additional work completed	X		X		X				SOIL: VOCs > DWP & VSIC SVOCs > GSIP Metals > GSIP GW: 1,4-dioxane > Proposed DW (8.5 µg/L) SVOCs > DW Metals > DW & GSI NOTES: Dibromochloropropane exceeds the 100-acre source area VSIC in one location. It does not exceed the 1/2-acre source area VSIC. Therefore, it is not likely to be a concern for the ambient air pathway. COCs not detected in Plant 3 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site.
AREA 16	NA	AOI 3-11	SWMU 14 - Former Scrap Metal Storage Areas	**Phase 1 Scope:** Two soil borings were advanced to 10 ft bgs and sampled at highest PID interval and deepest interval. **Results:** SVOCs detected in soil below Part 201 Criteria at 2-4 ft bgs.	**I. Assessment** **Scope:** Based on Phase 1 results, eight step-out borings were completed to an average 20 ft bgs to assess SVOC impacts in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** SVOCs detected in soil detected exceeding Part 201 Criteria, generally associated with fill material 5-10' below grade. **II. Characterization** **Scope:** Three additional step-out soil borings were completed to 20 ft bgs to define SVOCs in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** SVOCs defined horizontally. Metals lead and mercury detected in soil exceeding Part 201 Criteria not defined to east. Lead in excess of DC Criteria. **III. Delineation** **Scope:** Seven additional step-out soil borings were completed to an average 20 ft bgs to define metals in soil. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater collected from saturated permeable zones (if encountered). **Results:** Arsenic and other metals detected in soil and groundwater exceeding Part 201 Criteria not defined to the south or east.	**Area 16 Soil and Groundwater Metals Investigation** **Scope:** Based on the presence of arsenic and other metals detected in soil and groundwater, two soil borings were advanced to 25 ft bgs to define metals in soil to the east and south of the area. Soil samples were collected at approximate 5 ft intervals. Three shallow monitoring wells were installed in the vicinity of impacted soil borings to evaluate metals in groundwater. **Results:** Lead in soil detected exceeding Part 201 Direct Contact Criteria east of the area at 5 ft bgs. Additional metals detected exceeding Part 201 Criteria east and south of the area from 0-10 ft bgs. Metals in groundwater detected exceeding Part 201 Criteria east near the eastern property boundary, and defined to the south.					X			X	SOIL: SVOCs > DWP, GSIP, & DC Metals > DWP, GSIP, DC, & PSIC GW: Metals > DW & GSI NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria. Additional work will be completed between Area 16 and the southeastern Plant 3 property boundary to define the extent of arsenic in groundwater.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (PAHs and Lead) and PSIC (Mn) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover). 4) Off-site groundwater use restriction
AREA 17	NA	AOI 3-3 AOI 3-4 AOI 3-9	ID 3-4 - SWMU 18 - Machining Residue Storage Area. 20 cubic yard roll-off box located. ID 3-9 - AOC 2 - Building 301 UST Farm. Six USTs, stored polymer, sulfuric acid, soluble oil, gasoline, hydraulic oil, and APCO cleaner; were removed in 1989.	**Phase 1 Scope:** Five soil borings were advanced to 20 ft bgs, with samples collected at highest PID interval and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). 12 permanent monitoring wells were also sampled. **Results:** VOCs and SVOCs detected in groundwater below Part 201 Criteria. SVOCs detected in soil below Part 201 Criteria. Selenium detected in soil exceeding Part 201 Criteria at one location between 11-12 ft bgs. NAPL was encountered in one permanent monitoring well.	**I. Assessment** **Scope:** Based on Phase 1 results, eight step-out soil borings were completed to an average 20 ft bgs to assess VOCs and SVOCs in soil and groundwater. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). Thee HPT/VAP borings were completed to an average 75 ft bgs to characterize stratigraphy and define soil impacts vertically. Samples were collected at 5 ft intervals. 22 LIF borings were completed to 30 ft bgs to delineate the NAPL plume. **Results:** VOCs and SVOCs detected in soil exceeding Part 201 Criteria at 16-17 ft bgs to the south of the Area. Copper detected in soil exceeding Part 201 Criteria, defined vertically and horizontally to the east. **II. Characterization** **Scope:** Nine additional step-out soil borings were completed to 30 ft bgs to define VOCs in soil south of Area. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** VOCs and SVOCs detected in soil exceeding Part 201 Criteria defined to the vertically and horizontally. VOCs detected in groundwater exceeding Part 201 Criteria defined vertically and horizontally. **III. Delineation** **Scope:** Three NAPL monitoring wells were installed in the southern area of concern identified by the LIF study in order to provide permanent NAPL monitoring points. One monitoring well was installed east of the NAPL plume to provide a permanent monitoring point for the delineation of groundwater impacts. **Results:** New well was dry upon attempt to sample.	COCs defined; no additional work completed	X	X	X	X	X			X	SOIL: VOCs > DWP, GSIP, & SVIIC SVOCs > GSIP Metals > GSIP GW: VOCs > DW, GSI, & $GW_{VI\text{-}nr}$ 1,4-dioxane > Proposed DW (8.5 µg/L) SVOCs > DW Metals > DW & GSI NOTES: Elevated VOCs associated with LNAPL plume. Additional soil sampling will be completed east of Area 17 near the Plant 3 property boundary to define the extent of arsenic in soil above the DW criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for VI or data showing conditions acceptable for VI. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 18	NA	AOI 3-2 AOI 3-6	ID 3-2 - SWMU 16 - Oily Waste Treatment System. Treated oily wastewater; Two concrete used oil holding tanks, Two concrete oily sludge tanks. ID 3-6 - SWMU 20 - Former Electroplating Waste Treatment System. Treated electroplating wastes (copper, nickel, and chromium). Included an Acid Wash Tank, Sludge Storage Tank, Waste Acid Storage Tank.	**Phase 1 Scope:** Two soil borings were advanced to 30 ft, with samples collected at highest PID interval and deepest interval. Groundwater samples collected from saturated permeable zones (if encountered). Groundwater samples were also collected from two permanent monitoring wells. **Results:** VOCs detected in soil < Part 201 Criteria. Metals boron and lead detected in groundwater exceeding Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, seven step-out soil borings were completed to 20 ft bgs to assess VOCs in soils. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones (if encountered). One deep VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define soil impacts vertically. VAP soil/gw samples were collected at 10 ft intervals. **Results:** SVOCs detected in soil exceeding Part 201 Criteria defined horizontally to the south. Metals boron and cobalt detected in soil exceeding Part 201 Criteria defined vertically and horizontally to the south and west. Vanadium detected in groundwater exceeding Part 201 Criteria defined horizontally to the south. **II. Characterization** **Scope:** Three additional soil borings were completed to 30 ft bgs to define soil SVOCs and groundwater metal impacts. Soil samples were collected at approximate 10 ft intervals based on field screening results. Groundwater samples collected from saturated permeable zones. **Results:** SVOCs in soil defined vertically and horizontally. **III. Delineation** **Scope:** One step-out soil boring was completed to 30 ft bgs to define select soil metal impacts. Soil samples were collected at 10 ft intervals. **Results:** Boron in soil defined horizontally.	**Utility Corridor Investigation** **Scope:** To address potential contaminant migration concerns through the utility corridor, two soil borings were advanced to 20 ft bgs in the vicinity of storm sewer lines. **Results:** Both borings were dry. **Historic Arsenic Resampling** **Scope:** Based on historic arsenic concentrations in soil exceeding Part 201 Criteria, one soil boring was advanced to 25 ft bgs east of the area, in the vicinity of the historic exceedance. **Results:** Arsenic was not detected exceeding Part 201 Criteria. **Vinyl Chloride Source Assessment** **Scope:** To verify whether vinyl chloride source mass is located on-Site, one bedrock monitoring well (MW-13-39B) was installed northeast of the area. **Results:** Vinyl chloride was not detected.					X			X	SOIL: SVOCs > DWP, GSIP, & DC Metals > DW & GSI GW: Metals > DW & GSI NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria. Additional soil sampling will be completed east of Area 18 near the Plant 3 property boundary to define the extent of arsenic in soil above the DW criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (PAHs) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).

Investigation Area	Subarea	Associated AOI	AOI Summary	RFI Phase 1 Investigation	RFI Phase 2 Investigation Sequence/Results	RFI Phase 2 Supplemental Investigation Sequence/Results	Constituents of Concern > PART 201 RBSLs								Summary of Exceedances	Potential Corrective Measures
							VOCs						Metals			
							CVOCs	BTEX	1,4-Dioxane	Other VOCs	SVOCs	PCBs	CrVI	Other		
AREA 19	NA	AOI ID 3-17	Broach Machine Filter Pit - 9' by 20' by 9' pit	**Phase 1 Scope:** Soil boring P3-SB-25 was advanced to 10 ft bgs, with samples collected at highest PID interval and deepest interval. **Results:** Metals arsenic, boron, cobalt, selenium, and vanadium detected in soil exceeding Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to an average 15 ft bgs to define metals impacts in soils. Soil samples were collected at approximate 10 ft intervals. One VAP boring was completed to bedrock (or refusal) to characterize stratigraphy and define metals in soil vertically. VAP soil/gw samples collected at 10 ft intervals. Groundwater samples were collected from saturated permeable zones (if encountered). **Results:** Metals detected in soil exceeding Part 201 Criteria defined vertically and horizontally to the north, east and south. Boron detected in perched water exceeding Part 201 Criteria, defined vertically. **II. Characterization** **Scope:** Two additional step-out soil borings were completed to the south and west to 20 ft bgs to define SVOC and metals impacts in soils. Soil samples were collected at approximate 10 ft intervals. Groundwater samples collected from saturated permeable zones (if encountered). **Results:** SVOCs and metals in soil defined vertically and horizontally. Arsenic and boron in perched water > Part 201 Criteria not defined locally to the south.	COCs defined; no additional work completed					X			X	SOIL: SVOCs > GSIP Metals > DWP, GSIP, & DC GW: Metals > DW & GSI NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (As) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 20	NA	AOI 3-51	Building 304 and 305 Press Pit Operations	**Phase 1 Scope:** Four soil borings were advanced to an average 20 ft bgs, with samples collected at the highest PID interval and the deepest interval. **Results:** SVOCs detected in soil below Part 201 Criteria. Selenium detected in soil on western side of Area exceeding Part 201 Criteria.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to 20 ft bgs to define/verify SVOC impacts in soils in northern portion of area. Soil samples were collected at approximate 10 ft intervals based on field screening results. One VAP boring was completed to refusal (50 ft bgs) to characterize stratigraphy and define SVOC and metals impacts in soil vertically. VAP boring soil samples were collected at 10 ft intervals. **Results:** SVOCs detected in shallow soil near property boundary exceeding Part 201 Criteria; defined vertically and horizontally to the south. Cobalt detected in soil exceeding Part 201 Criteria defined vertically and horizontally to the south and west. **II. Characterization** **Scope:** Three additional step-out soil borings were completed to 20 ft bgs to define SVOC and metal impacts at the northern edge of the Area. Soil samples were collected at approximate 10 ft intervals based on field screening results. **Results:** SVOCs and metals detected in soil exceeding applicable Part 201 Criteria defined vertically and horizontally.	COCs defined; no additional work completed					X			X	SOIL: SVOCs > GSIP Metals > DWP, GSIP & PSIC NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria. Manganese exceedance of PSIC is deep (17-18' bgs) and not likely to be a concern for ambient air unless soil is brought to the surface.	1) Restrict potable use of groundwater on-site. 2) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).
AREA 21	NA	AOI 3-51	Building 304 and 305 Press Pit Operations	**Phase 1 Scope:** Two soil borings were advanced to 15 ft bgs, with samples collected at t he highest PID interval and the deepest interval. **Results:** Metals arsenic, boron, cobalt, selenium, and vanadium detected in soil exceeding Part 201 Criteria at one location.	**I. Assessment** **Scope:** Based on Phase 1 results, four step-out soil borings were completed to 15 ft bgs to assess metals impacts in soil. Soil samples were collected at approximate 10 ft intervals. **Results:** Metals arsenic, boron, cobalt, and selenium detected in soil exceeding Part 201 Criteria between 10-15 ft bgs, defined horizontally to the north, south, and west. **II. Characterization** **Scope:** One additional step-out soil boring was completed to 20 ft bgs to define metals impacts in soil to the east. Soil samples were collected at 10 ft intervals. **Results:** Metals in soil defined vertically and horizontally.	COCs defined; no additional work completed								X	SOIL: Metals > DWP, GSIP, & DC NOTES: COCs not detected in Plant 3 storm sewer samples above GSI criteria.	1) Restrict potable use of groundwater on-site. 2) Require exposure barrier for DC (As) exceedances. 3) Handle excavated soils appropriately (e.g., don't bring to surface and use as surface cover).

Notes:

* - COCs indicate soil and groundwater exceedances detected during the RFI Phase 1 activities or during previous historical soil investigations.

(1) - Target analytes based on analytes detected during the RFI Phase 1 sampling activities and take into consideration the past use of the Area Of Interest, prior sampling density (i.e., assessment vs. characterization) and analytes detected upgradient and/or in surrounding AOIs.

(2) - Sampling step-out grid based on the size of the Investigation Area or AOI and the recommendations provided by the MDEQ Sampling Strategies and Statistical Training Manual (MDEQ RRD 2002); Small Area = $(\sqrt{A}/\pi)/2$, Large Area = $(\sqrt{A}/\pi)/4$ (results rounded to the nearest 5 feet)

(3) - Target media based on Phase 1 and historical results for soil and groundwater. For example, if soil impacts are defined vertically, the Phase 2 initial assessment will focus on horizontal delineation in soil first to determine if there is a viable source of target analytes before investigating groundwater.

(4) - Sample density is based on the amount of data available and the soil/groundwater analytical results for an area collected during the RFI Phase 1. For example, if an area has low-level detections of SVOCs in one or two borings and no indication of groundwater impacts, initial sampling will be completed based on field screening or otherwise at approximately 10-foot intervals ("normal") throughout the vadose zone. If soil and groundwater data suggest the area may be a source of COCs, soil and groundwater sampling will be completed at nominal 5-foot spacing ("higher resolution").

Colors - general indication of area category as defined in Section 4.1 and indication of the general priority: Green: COCs were identified in soil/gw, but (with the possible exception of metals) at concentrations below the most restrictive MDEQ Part 201 Criteria - low priority.

Yellow: Soil and/or groundwater impacts were identified at a concentration that exceeds applicable Part 201 Criteria - medium priority. Red: Soil and groundwater sampling, often combined with historical data, has identified a source of COCs that are likely contributing to groundwater impacts beneath the Site - high priority

Abbreviations -

VOC - volatile organic compounds
SVOCs - semi-volatile organic compounds
PCBs - polychlorinated biphenyls
RBSLs - MDEQ Risk-Based Screening Levels
DCC - Direct Contact Criteria
DWC - Residential Drinking Water Criteria
GC - Groundwater Contact Criteria
GSI - Groundwater-Surface Water Interface Criteria
DWP - Residential Drinking Water Protection Criteria
GSIP - Groundwater-Surface Water Interface Protection Criteria
GW_{Vinv} - draft Groundwater Concentrations for Vapor Intrusion
PSIC - Particulate Soil Inhalation Criteria
SVIIC - Soil Volatilization to Indoor Air Inhalation Criteria
VSIC - Volatile Soil Inhalation Criteria
BTEX - benzene, toluene, ethylbenzene, xylenes
Cr - chromium
CrVI - hexavalent chromium
NFA - no further action
GW - groundwater
PID - photoionization detector
HPT - Hydraulic Profiling Tool
LIF - laser induced fluorescence
VAP - Vertical Aquifer Profile Sample
VI - vapor intrusion

Report Summary

Lab Sample ID(s): S55889.01
Project: B0064480.2013.00106
Collected Date: 03/28/2013
Submitted Date/Time: 03/28/2013 16:30
Sampled by: Colleen Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S55894.01
Project: B0064480.2013.00106
Collected Date: 03/29/2013
Submitted Date/Time: 03/29/2013 11:00
Sampled by: C. Barton
P.O. #: B0064480.2013.0

Mercury Reporting limit corrected

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S55920.01
Project: B0064480.2013.00106
Collected Date: 04/01/2013
Submitted Date/Time: 04/02/2013 08:00
Sampled by: Colleen Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S55939.01-S55939.03
Project: B0064480.2013.00106
Collected Date: 04/02/2013
Submitted Date/Time: 04/02/2013 15:30
Sampled by: C. Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S55960.01-S55960.03
Project: B0064480.2013.00106
Collected Date: 04/03/2013
Submitted Date/Time: 04/04/2013 08:00
Sampled by: Colleen Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Report Summary

Lab Sample ID(s): S56086.01
Project: B0064480.2013.00106
Collected Date: 04/15/2013
Submitted Date/Time: 04/16/2013 08:00
Sampled by: C. Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56157.01
Project: B0064480.2013.00106
Collected Date: 04/19/2013
Submitted Date/Time: 04/19/2013 13:30
Sampled by: C. Barton
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56188.01-S56188.03
Project: B0064480.2013.00106
Collected Date: 04/22/2013 - 04/23/2013
Submitted Date/Time: 04/23/2013 16:00
Sampled by: Austin Westhmis
P.O. #: B0064480.2013.0

Final Results for all analysis

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56208.01-S56208.04
Project: B0064480.2013.00106
Collected Date: 04/24/2013
Submitted Date/Time: 04/25/2013 08:00
Sampled by: Unknown
P.O. #: B0064480.2013.0

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak

Report Summary

Lab Sample ID(s): S56223.01-S56223.02
Project: B0064480.2013.00106
Collected Date: 04/25/2013
Submitted Date/Time: 04/25/2013 16:45
Sampled by: Adam Richmond
P.O. #: B0064480.2013.0

All results are finalized

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56508.01-S56508.08
Project: RACER-Lansing B0064479.2013.00102/B0064480.2013.00102/B00644
Collected Date: 05/17/2013
Submitted Date/Time: 05/17/2013 15:45
Sampled by: SEthan, ARichmond
P.O. #: B0064481.2013.00102

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Project: Lansing Plant Project# B0064481.2013.00603
Collected Date: 05/23/2013
Submitted Date/Time: 05/24/2013 09:30
Sampled by: Steve Stelter
P.O. #: B0064481.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56571.01-S56571.03
Project: Lansing Plant Project# B0064480.2013.00603
Collected Date: 05/22/2013 - 05/23/2013
Submitted Date/Time: 05/24/2013 09:30
Sampled by: Joe Rumschlag
P.O. #: B0064480.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56587.01-S56587.05
Project: Lansing Plant 3 Project# B0064480.2013.00603
Collected Date: 05/24/2013
Submitted Date/Time: 05/24/2013 15:30
Sampled by: RPrigge/JRumschlag
P.O. #: B0064480.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak

Report Summary

Lab Sample ID(s): S56588.01-S56588.03
Project: Lansing Plant 2 Project# B0064479.2013.00603
Collected Date: 05/24/2013
Submitted Date/Time: 05/24/2013 15:30
Sampled by: Alex Villhauer
P.O. #: B0064479.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56589.01-S56589.03
Project: Lansing Plant 6 Project# B0064481.2013.00603
Collected Date: 05/24/2013
Submitted Date/Time: 05/24/2013 15:30
Sampled by: Unknown
P.O. #: B0064481.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Report Summary

Lab Sample ID(s): S56603.01-S56603.02
Project: Lansing Plant 6 Project# B0064481.2013
Collected Date: 05/28/2013
Submitted Date/Time: 05/29/2013 09:30
Sampled by: Steve Stelter
P.O. #: B0064481.2013

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Report Summary

Lab Sample ID(s): S56604.01-S56604.05
Project: Lansing Plant 3 Project# B0064480.2013.00603
Collected Date: 05/28/2013
Submitted Date/Time: 05/29/2013 09:30
Sampled by: Joseph Rumschlag
P.O. #: B0064480.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Report Summary

Lab Sample ID(s): S56605.01-S56605.04
Project: Lansing Plant 3 Project# B0064480.2013.00603
Collected Date: 05/28/2013
Submitted Date/Time: 05/29/2013 09:30
Sampled by: Robert Prigge
P.O. #: B0064480.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Report Summary

Lab Sample ID(s): S56645.01-S56645.02
Project: Lansing Plant Project# B0064480.2013.00603
Collected Date: 05/30/2013
Submitted Date/Time: 05/31/2013 09:30
Sampled by: Joe Rumschlag
P.O. #: B0064480.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56592.01-S56592.02
Project: Lansing Plant 2 Project# B0064479.2013.00603
Collected Date: 05/24/2013
Submitted Date/Time: 05/28/2013 10:45
Sampled by: Alex Villhauer
P.O. #: B0064479.2013.00603

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.

Violetta F. Murshak
Laboratory Director

Report Summary

Lab Sample ID(s): S56622.01-S56622.04
Project: Lansing Plant Project# B0064480.2013
Collected Date: 05/29/2013
Submitted Date/Time: 05/30/2013 09:30
Sampled by: Robert Prigge
P.O. #: B0064480.2013

Report Notes

Results relate only to items tested as received by the laboratory.
Methods may be modified for improved performance.
Results reported on a dry weight basis where applicable.
'Not detected' indicates that parameter was not found at a level equal to or greater than the reporting limit (RL).
Samples are held by the lab for 30 days from the final report date unless a written request to hold longer is provided by the client.
Report shall not be reproduced except in full, without the written approval of Merit Laboratories, Inc..

Laboratory Certifications:
Michigan DNRE (#9956), DOD/ISO 17025 (#69699), WBENC (#2005110032), Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814)
Some analytes reported may not be certified. Full certification lists are available upon request.
