Table 16
RFI Phase 2 Summary Report
RACER - Lansing Plant 6
Summary of Soil Sample Analytical Results

Table Notes:

- (1) Adjusted by a factor of 0.43 for a 100-acre source area.
 -- Shading indicates result exceeding one or more MDEQ Part 201 Generic Cleanup Criteria and Screening Levels, Dated March 25, 2011.
 -- Bold fonts represent data where detections were noted above the MDL but below MDEQ Part 201 Generic Cleanup Criteria.
 -- Data shown in [] represent duplicate sample analytical results.
 mg/kg - milligrams per kilogram
 µg/kg - micrograms per kilogram
 * - Sample was analyzed in on-site lab with instruments calibrated to screening mode. This data was not validated
 ** - Sample collected by others and analytical reports provided to ARCADIS. This data was not validated
^a - Sample exceeds Residential Drinking Water Protection Criteria
^b - Sample exceeds Groundwater Surface Water Interface Protection Criteria
^c - Sample exceeds Groundwater Contact Protection Criteria
^d - Sample exceeds Non-Residential Soil Volatilization to Indoor Air Criteria
^e - Sample exceeds Non-Residential Infinite Source Volatile Soil Inhalation Criteria
^f - Sample exceeds Non-Residential Direct Contact Criteria
^g - Sample exceeds Non-Residential Particulate Soil Inhalation Criteria
^h - Sample exceeds Soil Saturation Levels
ⁱ - Sample exceeds Statewide Background Default Levels

MDEQ Criteria Footnotes: (as revised September 28, 2012)

- = Not listed in MDEQ Criteria Tables.
 ID = Insufficient data to develop a criterion.
 NA = Not available.
 NLL = Not likely to leach.
 NLV = Not likely to volatilize.
 C = Value presented is a screening level based on the chemical-specific generic soil saturation concentration (C_{sat}) since the calculated risk-based criterion is greater than C_{sat}.
 D = Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).
 G = Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life shall be calculated based on the pH or hardness of the receiving surface water. A hardness value of 257 mg/L was used.
 M = Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.
 T = Refer to the federal Toxic Substances Control Act (TSCA), 40 C.F.R. §761, Subpart D and 40 C.F.R. §761, Subpart G, to determine the applicability of TSCA cleanup standards.
 W = Concentrations of trihalomethanes in soil shall be added together to determine compliance with the drinking water protection criterion of 1,600 µg/kg.
 X = The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water source.
 DD = Hazardous substance causes developmental effects. Residential direct contact criteria are protective of both prenatal and postnatal exposure. Nonresidential direct contact criteria are protective for a pregnant adult receptor.

Lab Data Qualifiers:

- B = Compounds also found in associated method blank
 D = Compound quantified using a secondary dilution
 E = Analyte exceeds calibration range
 I = Matrix interference with internal standard
 J = The compound/constituent was positively identified; however, the associated numerical value is an estimated concentration only.
 K = Elevated reporting limits due to low total solids
 N = Normal Sample
 p = Benzo(b)fluoranthene and Benzo(k)fluoranthene integrated as one peak
 R = Rejected
 S = Surrogate recovery outside of control limits
 T = No correction for Total Solids
 UJ = The analyte was not detected above the quantitation limits, however the quantitation limits is estimated
 U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
 X = Elevated reporting limit due to matrix interference
 z = Sample preserved in the lab

TABLE 17
RFI Phase 2 Summary Report
RACER Plant 6
Summary of Groundwater Sample Analytical Results

Table Notes:

- Shading indicates result exceeding one or more MDEQ Part 201 Generic Cleanup Criteria and Screening Levels, Dated March 25, 2011.
- Bold fonts represent data where detections were noted above the MDL but below MDEQ Part 201 Generic Cleanup Criteria.
- Data shown in [] represent duplicate sample analytical results.
- mg/L - milligrams per liter
- µg/L - micrograms per liter
- * - Sample was analyzed in on-site lab with instruments calibrated to screening mode. This data was not validated
- ** - Sample collected by others and analytical reports provided to ARCADIS. This data was not validated
- ^a - Sample exceeds Residential Drinking Water Criteria
- ^b - Sample exceeds Groundwater Surface Water Interface Criteria
- ^c - Sample exceeds Groundwater Contact Criteria
- ^d - Sample exceeds Non-Residential Groundwater Volatilization to Indoor Air Inhalation Criteria
- ^e - Sample exceeds Water Solubility Criteria
- ^f - Sample exceeds Flammability and Explosivity Screening Levels
- ^g - Sample exceeds Acute Inhalation Screening Levels
- ^h - Sample exceeds Non-Residential Groundwater Concentrations for Vapor Intrusion

MDEQ Criteria Footnotes: (as revised September 28, 2012)

- - = Not listed in the MDEQ Criteria Tables.
- ID = Insufficient data to develop a criterion.
- Na = Not available.
- NLV = Not likely to volatilize.
- A = Criterion is the state of Michigan drinking water standard established pursuant to Section 5 of 1976 PA 399, MCL 325.1005.
- D = Calculated criterion exceeds 100 percent, hence it is reduced to 100 percent or 1.0E+9 parts per billion (ppb).
- E = Criterion is the aesthetic drinking water value, as required by Section 20120a(5) of the Natural Resources and Environmental Protection Act, 1994 PA 451, as amended (NREPA).
- F = Criterion is based on adverse impacts to plant life and phytotoxicity.
- G = Groundwater surface water interface (GSI) criterion depends on the pH or water hardness, or both, of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life shall be calculated based on the pH or hardness of the receiving surface water. A hardness value of 257 mg/L was used.
- L = Criteria for lead are derived using a biologically based model, as allowed for under Section 20120a(10) of the NREPA, and are not calculated using the algorithms and assumptions specified in pathway-specific rules.
- M = Calculated criterion is below the analytical target detection limit, therefore, the criterion defaults to the target detection limit.
- S = Criterion defaults to the hazardous substance-specific water solubility limit.
- W = Concentrations of trihalomethanes in groundwater shall be added together to determine compliance with the Michigan drinking water standard of 80 µg/L.
- X = The GSI criterion shown in the generic cleanup criteria tables is not protective for surface water that is used as a drinking water
- AA = Comparison to these criteria may take into account an evaluation of whether the hazardous substances are adsorbed to particulates rather than dissolved in water and whether filtered groundwater samples were used to evaluate groundwater.

Lab Data Qualifiers:

- B = Compounds also found in associated method blank
- D = Compound quantified using a secondary dilution
- E = Analyte exceeds calibration range
- I = Matrix interference with internal standard
- J = The compound/constituent was positively identified; however, the associated numerical value is an estimated concentration only.
- K = Elevated reporting limits due to low total solids
- N = Normal Sample
- p = Benzo(b)fluoranthene and Benzo(k)fluoranthene integrated as one peak
- R = Rejected
- S = Surrogate recovery outside of control limits
- T = No correction for total solids
- UJ = The analyte was not detected above the quantitation limits, however the quantitation limits is estimated
- U = The compound was analyzed for but not detected. The associated value is the compound quantitation limit.
- X = Elevated reporting limit due to matrix interference
- z = Sample preserved in the lab

TABLE 18
RFI Phase 2 Summary Report
RACER Plants 2, 3 and 6
Summary of Storm Structure Samples Analytical Results

General Notes:

1. GSI Criteria obtained from the MDEQ Part 201 generic cleanup Table 1, dated September 28, 2012.
2. The total chromium data is compared to the cleanup criteria for Chromium VI.
3. **Bold** and shading denotes a result above of the Groundwater Surface Water Interface Criteria.
4. - - indicates criteria is not developed.
5. *- Same storm sewer as P6-MH-SW but collected from next structure downgradient, immediately before the stormceptor
6. Gray shading - The January 18, 2013 samples for P3-MH-S and P3-MH-NE were inadvertently labeled with the same name, It is therefore unclear which result goes with which sample. Results will be confirmed during follow-up sampling events.
7. Only those constituents of concern (COCs) with detections are listed. If a COC is not listed then the lab results showed non-detect.

MDEQ Criteria Footnotes: (as revised September 28, 2012)

(G) Groundwater surface water interface (GSI) criterion depends on the water hardness of the receiving surface water. The final chronic value (FCV) for the protection of aquatic life was calculated based on the average of readily available published hardness values calculated to be 257 mg/L. The generic GSI criterion is the lesser of the calculated FCV, the wildlife value (WV), and the surface water human nondrinking water value (HNDV).

(X) The GSI criterion is not protective for surface water that is used as a drinking water source.

ID = Insufficient data to develop a criterion.

- - = Not listed in the MDEQ Criteria Tables.

Acronyms and Abbreviations:

GSI = Groundwater Surface Water Interface

NA = Not analyzed

ND = Not detected.

Appendix A

RFI Phase I Investigation Results

APPENDIX A

PHASE 1 AREA OF INTERST (AOI) TABLES

The tables represented in Appendix A: Phase 1 AOI Tables provide a final list of AOIs as agreed upon between ARCADIS and the MDEQ and that was provided in the approved RFI Work Plan dated August 2011.

These tables provide information on the investigation activities completed during the Phase 1 investigation, (completed in the spring/summer of 2011) and a brief summary of the investigation results. The table also provides a determination on whether further action is required at a particular AOI based on the results. Finally, for those AOI where further investigation was required these tables identify what Area each particular AOI was associated with during the Phase 2 Investigation.

RFI WORK PLAN PHASE 1 INVESTIGATION SUMMARY - PLANT 2

AOI Identification ⁽¹⁾	AOI Title	AOI Description/Components	AOI Location Building Number Column/Bay	AOI Approximate Depth Below Grade (ft)	Materials Handled	Phase I Investigation Associated Soil Boring ID	RFI Phase I Investigation Activities Summary	Phase I Investigation Determination	Associated Phase II Investigation Area (See Table 1: RFI Work Plan Phase 2 Summary Matrix for summary of Phase 2 Investigation Activities and determinations)
2-1	SWMU 1 - Waste Water Treatment System/Formers Coal Pile	Treats wastewater containing ELPO, oil, suspended solids, and heavy metal wastes. Prior to WWT, area was used to store coal.	South of Building 204	0	Waste Water/Coal	P2-SB-27 P2-SB-28 P2-MW-2	Completed 3 soil borings. No VOCs detected in soil samples. No SVOCs detected in soil samples. No metals detected in soil samples above criteria. Groundwater sample collected in nearby well above DW criteria for metals.	Further investigation activities required.	Area 5-3
2-6	SWMU 6 - Former Oily Waste Treatment System	Three 10,000-gallon concrete tanks, two treatment tanks, two gravity separators, chemical storage tanks	North of Building 244	<15	Oily Waste	P2-SB-11 P2-SB-12	Completed 2 soil borings. VOCs not analyzed (no history of VOCs based on historical data or past operations). Several SVOCs detected in soil samples below criteria. Metals detected in soil samples above DWP & GSI. PCBs detected in soil samples.	Further investigation activities required.	Area 5-2
2-7	SWMU 7 - Building 242 Former Drum Storage Area	Likely stored paint waste, spent solvents, and used oil. Stored PCB waste.	Inside the North End of Building 242	10	Waste Paints, Waste Solvents, Used Oil, PCB Wastes	P2-SB-30 P2-MW-1	Completed 1 soil boring. SVOCs detected in soil samples below criteria. VOCs detected in soil samples below criteria. No metals detected in soil samples above criteria.	Further investigation activities required.	Area 8
2-8	SWMU 8 - Former Outdoor Storage Area	Likely stored waste paint, spent solvent, and used oils on a concrete pad.	Northwest of Building 241	0	Waste Paints, Waste Solvents, Used Oil	P2-SB-33	Completed 1 soil boring. Several SVOCs detected in soil samples below criteria. No metals detected in soil samples above criteria.	Further investigation activities required	Area 4
2-11	SWMU 11 - Former Gondola Storage Area	Two paved outdoor areas; stored 1-to 3-cubic yard steel gondolas	Northwest of Building 206C	0	Oil Filters, Air Filters, Oil and Grease	P2-SB-35 P2-SB-34 P2-MW-3	Completed two soil borings. No VOCs in soil samples detected. No SVOCs in soil samples detected. Metals detected in soil samples above DWP & GSI. MW-3 groundwater sample above DW criteria for metals.	Further investigation activities required.	Area 3 and Area 5-1
2-12	SWMU 12 - Former Empty Container Storage Area	Empty 55-gallon drums generated from facility operations	Southwest of Building 241	0	Empty 55 Gallon Drums	P2-SB-31	Completed 1 soil boring. No VOCs in soil samples detected. SVOCs detected in soil samples below criteria. Metals detected in soil samples above DWP & GSI.	Further investigation activities required.	Area 2
2-14	SWMU 14 - Former Scrap Metal Storage Areas	Stored non-hazardous scrap metal (machining chips, turnings, trimmings, and scrap parts)	West of Building 241 and East of Building 206	0	Scrap Metal	P2-SB-32 P2-SB-29	Complete two soil borings. SVOCs detected in soil samples above GSI criteria. Metals detected in soil samples above DWP and/or GSI criteria.	Further investigation activities required.	Area 5-2
2-15	AOC 1 - Building 225 UST Farm	Eight former 30,000-gallon tanks. Removed 1989. Closure report submitted 10/1/96.	South of Building 225	<15	Used Oil, Quench Oil, Cutting Oil and Lube Oil	B-2 B-7 P2-MW-4	Completed 3 soil borings and installed one monitoring well. SVOCs detected in soil samples above GSI and DC criteria. Metals detected in soil samples above DWP, GSI and DC criteria. VOCs detected in soil samples above DWP.	Further investigation activities required.	Area 5-5
2-16	AOC 3 - Building 250 UST Farm	2-20,000 gallon tanks that stored gasoline and diesel East of Building 250. 1-1,500 gallon tank that stored used oil located Southeast of Building 250. 1-12,000 gallon tank that stored heating oil located West of Building 250. All UST's removed in 1990 and 1991. Closure report submitted on 10/01/1996. Restrictive Covenant filed with Register of Deeds in 2003.	East of Building 250	<15	Gasoline, Diesel, and Used Oil		Collected groundwater sample from existing monitoring wells. Samples found to be above GSI criteria for metals.	Further investigation activates required.	Area 1
ID 2-23	Acid House and Two Storage Tanks of Unknown Operations	Two storage tanks with unknown contents were located immediately south of acid house.	West of Building 206, North of Basketball Court	15	Unknown (Likely Acids)	P2-SB-36	Completed 1 soil boring. No VOCs in soil samples detected. No SVOCs in soil samples detected. No metals detected in soil samples above criteria.	No additional investigation required.	No further action
2-52	Pickling Room	Concrete wall and acid-resistant floor	Building 203 A3	0	Unknown (Likely Acids)	P2-SB-37	Completed 1 soil boring. VOCs detected in soil samples below criteria. SVOCs detected in soil samples below criteria. No metals detected in soil samples above criteria. LNAPL containing TSCA level PCBs found in temporary well.	Further investigation activates required.	Area 5-2
ID 2-26	Quench Oil Operations	Quench Oil Tank	Building 206C B8 and C8	<10	Quench Oil	P2-SB-13 P2-SB-14	Completed two soil borings. SVOCs detected in soil samples below criteria. VOCs detected in soil samples below criteria. Metals detected in soil samples above GSI criteria. PCBs detected in soil samples.	Further investigation activities required.	Area 5-2
		Quench Oil Tank	Building 206 B4						
		Tank, Unknown	Building 206 A4						
		Water Quench Pit	Building 206 B3-4						
		Quench Oil Settling Tanks	Building 206 C3-4						
		Type B sumps	Building 206 C4-5

RFI WORK PLAN PHASE 1 INVESTIGATION SUMMARY - PLANT 2

AOI Identification ⁽¹⁾	AOI Title	AOI Description/Components	AOI Location Building Number Column/Bay	AOI Approximate Depth Below Grade (ft)	Materials Handled	Phase I Investigation Associated Soil Boring ID	RFI Phase I Investigation Activities Summary	Phase I Investigation Determination	Associated Phase II Investigation Area (See Table 1: RFI Work Plan Phase 2 Summary Matrix for summary of Phase 2 Investigation Activities and determinations)
ID 2-27	Paint Shop Sumps and Trenches	Three Sumps are 3'x3'x3' each	Buildings 206 and 237 B1-3	3	Paint Shop Liquid Wastes	P2-SB-22	Completed 1 soil boring. No VOCs detected in soil samples. SVOCs and metals not analyzed (no history of SVOCs or metals based on historical data or past operations).	No additional investigation required.	No further action.
ID 2-31	Press Pit and Associated Sumps, Pits, and Trenches	Two 3'x3' oil containment sumps under hydraulic presses	Building 207 A4-7	<15	Used Hydraulic Oil	P2-SB-18 P2-SB-19 P2-SB-20 P2-SB-21	Completed 4 soil borings. No VOCs in soil sampled detected. SVOCs detected in soil samples below criteria. Metals detected in soil samples above DWP and GSI criteria. Metals detected above DW criteria and GSI criteria in ground water sample collected. Shake tests completed showed positive results.	Further investigation activates completed.	Area 5-1
		Press pit sumps							
ID 2-32		2 oil containment sumps, 3'x3' and trench	Building 207 B7-8	3	Used Oil				
ID 2-33		2 oily waste line manhole sumps	Building 207 A5	<10	Oily Waste				
ID 2-34		2 Press Pits	Building 207 B5-6	<15	Used Hydraulic Oil				
ID 2-35		6" deep Tramp Oil trenches	Building 207 B1-4	<4	Used Tramp Oil				
		3' deep Tramp Oil sumps							
ID 2-49		Trenches and Hammer Pits Associated with Press Operations	Building 207 A2-11	<10	Unknown				
ID 2-36	Oil Separator and Sump	10" oily waste line runs to separator.	North Side of Building 231	<10	Used Oil	P2-SB-24	Completed 1 soil boring. PCBs detected in soils. VOCs detected in soil samples above DWP, GSI and/or SVII criteria. Shake test completed showed positive results. SVOCs detected in soil samples above GSI criteria.	Further investigation activities required.	Area 5-2
ID 2-37	Press Pits	Concrete press pits.	Building 242 C2-5	<15	Used Hydraulic Oil	P2-SB-26 P2-SB-23	Completed 2 soil borings. No VOCs in soils samples detected. SVOCs detected in soil samples above DWP and GSI criteria. No metal detected in soil sampled above criteria. PCBs detected in soils.	Further investigation activities required.	Area 8
		One sump associated with presses.	Building 242 B2						
ID 2-38	Scrap Steel Operations Pits	Scrap Steel Pits, 8' Deep	Building 242 A3-5	<15	Scrap Steel and Oily Waste	P2-SB-17	Completed 1 soil boring. SVOCs detected in soil samples below criteria. No VOCs in soil samples detected. No metals detected in soil samples above criteria.	Further investigation activities required.	Area 8
		Scrap Pit oily waste sump	Building 242 B2						
ID 2-39	Fuel Oil Pump House and Tank Farm	Eight oil storage tanks, 10.5' in diameter. Trenching associated with tanks. Three truck unloading stations associated with tanks	Building 229	<15	Fuel Oil	P2-SB-5 P2-SB-3 P2-SB-4	Completed 3 soil borings. VOCs detected in soil samples below criteria. No SVOCs in soil samples detected. Metals not analyzed.	Further investigation activities required.	Area 5-4
ID 2-55	PCB Storage Deck	10'x12' with one 1' deep sump in the center	Building 208A D1	1	PCBs	P2-SB-16	Completed 1 soil boring. PCBs non-detect in soil samples.	Therefore, no further investigation activities required.	No further action
ID 2-59	Press Pits	8' 4" deep, 21' by 35' and 67' by 25'	Building 201 D3, E3, F3, D-F/21-22, and K-M/21-22	9	Used Hydraulic Oil	P2-SB-15 P2-SB-25	Completed 2 soil borings. VOCs detected in soil samples above DWP criteria. SVOCs detected in soil samples above GSI criteria. Metals detected in soil samples above DWP and GSI criteria.	Further investigation activates required.	Area 5-3
Misc Item Data Gap Filler Borings	IDs: 2-20, 2-21, 2-22, 2-42, 2-43, 2-44, 2-46, 2-47, 2-48, 2-56, 2-57, 2-58, 2-59, 2-60, 2-63, 2-64,	SEE TABLE 2 IN THE RFI WORK PLAN (AUGUST 2011) FOR DESCRIPTIONS	SEE TABLE 2 IN THE RFI WORK PLAN (AUGUST 2011) FOR DESCRIPTIONS	SEE TABLE 2 IN THE RFI WORK PLAN (AUGUST 2011) FOR DESCRIPTIONS	SEE TABLE 2 IN THE RFI WORK PLAN (AUGUST 2011) FOR DESCRIPTIONS	P2-SB-8 P2-SB-1 P2-SB-2 P2-SB-9 P2-SB-10	Completed 7 soil borings. VOCs detected in soils above DWP criteria. SVOCs detected in soil sampled above DWP criteria. Metals detected in soil samples above DWP and GSI criteria.	Further investigation activities required.	Area 5-3

Notes:
1. AOI's listed represent the complete list of AOI's requiring investigation activates as agreed upon between ARCADIS and MDEQ over multiple working sessions and RFI Matrix submittal and comment periods. This list of AOIs represents the final list as presented in the approved RFI Work Plan dated August 2011.

NA - not applicable
Csat - Part 201 Soil Saturation Concentration Screening Levels
DC - Direct Contact Criteria
DWP - Drinking Water Protection Criteria
GSIP - Groundwater Surface Water Interface Protection
PCBs - Polychlorinated biphenyls
PSIC - Particulate Soil Inhalation Criteria
AOI - Area of Interest
ft. - Feet

LNAPL - Light Non-Aqueous Phase Liquic
ft. - Feet
SVIIC - Soil Volatilization to Indoor Air Inhalation Criteria
SVOCs - Semi-Volatile Organic Compounds
VOCs - Volatile Organic Compounds
VSIC - Infinite Source Volatile Soil Inhalation Criteria
RWC - Risk-based Redevelopment Worker Contact
TAL - target analyte list (for metals) - note: will include speciation of chromium (trivalent and hexavalent) where noted above
TCL - target compound list (for VOCs and SVOCs)

TABLE 2
RACER LANSING PLANTS 2, 3 and 6
RFI WORK PLAN PHASE 1 INVESTIGATION SUMMARY - PLANT 3

AOI Identification ⁽¹⁾	AOI Title	AOI Description/Components	AOI Location Building Number Column/Bay	AOI Approximate Depth Below Grade (ft)	Materials Handled	Phase I Investigation Associated Soil Boring ID Soil Boring ID	RFI Phase I Investigation Activities Summary	Phase I Investigation Determination	Associated Phase II Investigation Area (See Table 1: RFI Work Plan Phase 2 Summary Matrix for summary of Phase 2 Investigation Activities and determinations)
3-2	SWMU 16 - Oily Waste Treatment System	Treated oily wastewater; 2 concrete used oil holding tanks, 2 concrete oily sludge tanks	Northeast Portion of Building 301A	20	Oil Waste	P3-SB-5 P3-SB-6 boring 27	Completed 3 soil borings. VOCs detected in soil samples but below criteria. No SVOCs detected in soil samples. No metals detected above criteria in soil samples.	Further investigation activities required.	Area 18
3-3	SWMU 17 - Scrap Metal Pits and Bins	Scrap Yard Dock Area, 24 Scrap Pits (10' by 10' by 13'), 4,000 Gallon Soluble Oil Sump Pit, 2,000 Gallon Cutting Oil Sump Pit	Outside of Building 301, West of RR Tracks and East of Building 301, A8-11	10	Scrap Metal	P3-SB-28 P3-SB-29	Completed 2 soil borings. SVOCs not detected in soil samples. Metals detected above GSI criteria in soil samples. Metals detected above DW criteria in ground water sample collected.	Further investigation activities required.	Area 17
3-4	SWMU 18 - Machining Residue Storage Area	20 Cubic Yard Roll-off Box located .	East of scrap metal conveyor	0	Machining Residue	P3-SB-30	Completed 1 soil boring. Shake tests completed showed positive results. SVOCs detected in soil samples below criteria. No metals detected in soil samples above criteria.	Further investigation activities required	Area 17
3-5	SWMU 19 - Clarifier	Circular concrete below-grade clarifier	South of Willow Road	<15	Storm Water, Oil and Sediments		Inspect integrity of Tank	Further investigation activities required	TO BE COMPLETED
3-6	SWMU 20 - Former Electroplating Waste Treatment System	Treated electroplating wastes (copper, nickel, and chromium). Included an Acid Wash Tank, Sludge Storage Tank, Waste Acid Storage Tank,	Building 301A Whole Building Buildings 301A and 301D Whole Building	10	Electroplating Waste	boring 27	Completed 1 soil boring. VOCs not detected in soil samples. SVOCs not detected in soil samples. No metals detected above criteria in soil samples. Groundwater samples collected from nearby wells showed metals above criteria.	Further investigation activities required	Area 18
3-9	AOC 2 - Building 301 UST Farm	6 USTs, stored polymer, sulfuric acid, soluble oil, gasoline, hydraulic oil, and APCO cleaner; Were removed in 1989.	East of Building 301	<15	Polymer, Sulfuric Acid, Soluble Oil, Gasoline, Hydraulic Oil, APCO Cleaner	SB-2 (Original) SS-15	Completed 2 soil borings. No VOCs detected in soils samples. SVOCs detected in soil samples below criteria. No metals detected above criteria in soil samples.	Further investigation activities required	Area 17
3-10	AOC 4 - Former Electroplating Area	(1) Electroplating operations (2) New and Reworked Storage Tanks, Chromic Acid Reclaim, 7' diameter by 9' tall (3) 17 Acid Copper Plating Tanks (4) Sludge Sump Under Nickel Storage Tank, 1350 Gallons (5) 3 Wash water Tanks (1900 gal each) in Plating Area (6) Nickel Plating Tanks 1, 2, 3, 4, 6, 7, 8, and 9 (7) Copper Buffing Wash and Rinse Tanks (8) Bumper Plating Sumps (9) Dur'ni Nickel Operations Area, Tanks, Sumps and Drain Deck	North-Central Portion of Building 301	15	Electroplating Materials	boring 27 CH-13 CH-14 CH-15	Completed 4 soil borings. VOCs not detected in soil samples. SVOCs not detected in soil samples. Ground water sample collected above DW and GSI criteria for metals.	Further investigation activities required	Area 14
3-11	SWMU 14 - Former Scrap Metal Storage Areas	Stored scrap metal	West of Building 304 and East of Building 302	<5	Scrap Metal	P3-SB-24 P3-SB-31 P3-SB-32 P3-SB-34	Completed 4 soil borings. SVOCs detected in soil samples below criteria. Metals detected above criteria in soils samples.	Further investigation activities required.	Area 16
ID 3-13	Henry Filter Pits and Trenching	Coolant Trench and Sump, 1' 2" wide sluice trench Coolant Trenching Henry Filter Pits and Trenching	Building 302A C14 Building 302A E14 and E14 Building 302A A-B/12-15	<15	Used Hydraulic Oil	P3-SB-23	Completed 1 soil boring. No VOCs detected in soil samples. No SVOCs detected in soil samples. No metals detected in soil samples above criteria.	No further investigation activities required	No further Action
ID 3-15	Oil Sump for Crank Shaft Operations	N/A	Building 302A K12	<15	Used Oil	P3-SB-26	Completed 1 soil boring. VOCs detected in soil samples below criteria. Shake tests showed positive results. SVOCs detected in soil samples below criteria. Metals detected in soil samples above GSI criteria. PCBs detected in soil samples.	Further investigation activities required.	Area 15
ID 3-17	Broach Machine Filter Pit	9' by 20' by 9' pit	Building 302A A13	9	Used Oil	P3-SB-25	Completed 1 soil boring. No VOCs detected in soil samples. No SVOCs detected in soil samples. Metals detected in soil samples above DWP and/or GSI and/or DC criteria.	Further investigation activities required.	Area 19

Notes:
1. AOI's listed represent the complete list of AOI's requiring investigation activates as agreed upon between ARCADIS and MDEQ over multiple working sessions and RFI Matrix submittal and comment periods. This list of AOIs represents the final list as presented in the approved RFI Work Plan dated August 2011.

NA - not applicable
AOI - Area of Interest
Csat - Part 201 Soil Saturation Concentration Screening Levels
DC - Direct Contact Criteria
DWP - Drinking Water Protection Criteria
GSIP - Groundwater Surface Water Interface Protection
MDEQ - Michigan Department of Environmental Quality
PCBs - Polychlorinated biphenyls
PSIC - Particulate Soil Inhalation Criteria

SWMU - Solid Waste Management Unit
SVIIC - Soil Volatilization to Indoor Air Inhalation Criteria
SVOCs - Semi-Volatile Organic Compounds
VOCs - Volatile Organic Compounds
VSIC - Infinite Source Volatile Soil Inhalation Criteria
RC - restrictive covenant
RWC - Risk-based Redevelopment Worker Contact
TAL - target analyte list (for metals) - **note:** will include speciation of chromium (trivalent and hexavalent) where noted above
TCL - target compound list (for VOCs and SVOCs)

TABLE 3
RACER LANSING PLANTS 2, 3 and 6
RFI WORK PLAN PHASE 1 INVESTIGATION SUMMARY - PLANT 6

AOI Identification ⁽¹⁾	AOI Title	AOI Description/Components	AOI Location Building # Column/Bay	AOI Approximate Depth Below Grade (ft)	Materials Handled	Phase I Investigation Associated Soil Boring ID	RFI Phase I Investigation Activities Summary	Phase I Investigation Determination	Associated Phase II Investigation Area (See Table 1: RFI Work Plan Phase 2 Summary Matrix for summary of Phase 2 Investigation Activities and determinations)
6-1	SWMU 1 - Original Hazardous Waste Storage Area	40'x100' concrete area surrounded by trench; stored ELPO and paint-related wastes; Removed and replaced by Air Pollution Control System (ACSP) Incinerator	North of Building 22	5	ELPO and Paint Related Wastes	P6-SB-14 P6-SB-15	Completed 2 soil borings. No VOCs detected in soil samples. No SVOCs detected in soil samples. No metals detected in soil samples above criteria.	No further investigation activities required.	No Further Action
6-10	SWMU 10 - Non-Hazardous Waste Consolidation Area	40'x80' roofed area on a concrete base; managed epoxy purge, grinding waste, oven condensate, trim purge, and used hydraulic oil	South of Building 22	0	Epoxy Purge, Grinding Waste, Oven Condensate, Trim Purge and Used Hydraulic Oil	P6-SB-28 P6-SB-29	Completed 2 soil borings. VOCs not analyzed (no history of VOCs based on historical data or operations). No SVOCs detected in soil samples. No metals detected in soil samples above criteria.	No further investigation activities required.	No Further Action
6-11	SWMU 11 -- Wastewater Cistern (Industrial waste treatment pit)	100,000 gallons; managed wash water from rinsing automobile bodies and the overflow of phosphoric acid from phosphoric acid pickling tanks	Building 18 PP-QQ/11-12	<20	Automobile Body Wash Water and Phosphoric Acid	P6-SB-7 P6-SB-8	Completed 2 soil borings. VOCs and SVOCs not analyzed (no history of VOCs or SVOCs based on historical data or operations). Shake test completed showed positive results. Metals detected above DW criteria in groundwater sample collected.	Further investigation activities required.	Collected groundwater sample from P6-SB-07
6-14	SWMU 14 - Oil Accumulation Area	55-gallon steel drums; stored waste hydraulic oil	Building 8	0	Used Hydraulic Oil	P6-SB-1	Completed 1 soil boring. No VOCs detected in soil samples. No SVOCs detected in soil samples. No metals detected in soil samples above criteria.	No further investigation activities required.	No Further Action
6-16 6-33	AOC 1 - Tanks 5 and 6; Tank Farm	Tank 5: 4,000-gallon steel diesel fuel storage tank; Tank 6: 15,000-gallon steel gasoline storage tank 16' bgs; stores purge thinner/diesel fuel; Double walled tank with leak detection system; Installed in the same location as AOI 6-16	South of Building 23	15	Diesel and Gasoline, Metals Purge Thinner and Diesel Fuel	P6-SB-43	Completed 1 soil boring. No VOCs detected in soil samples. No SVOCs detected in soil samples. No metals detected in soil samples above criteria. 1,4-Dioxane detected in nearby monitoring wells.	Further investigation activities required.	Area 6
6-17 (formerly 6-4, 6-8)	AOC 2 - Tanks 1 (SWMU 4) and 3 (SWMU 8)	Tank 1 (SWMU 4): 7,500-gallon carbon steel virgin thinner storage tank; Tank 3 (SWMU 8): 12,000-gallon carbon steel virgin thinner storage tank	Southwest of Building 16	15	Virgin Thinner	P6-SB-42 (SA 4-3), VEW-5 P6-SB-33	Completed 3 soil borings. VOCs detected in soil samples above DWP, GSI and SVII criteria. SVOCs and metals not analyzed (no history of SVOCs or metals based on historical data or operations).	Further investigation activities required.	Area 7
6-18	Lead in Soil Area	Lead smelter	West of Buildings 10, 11, 12, 13 and 15	0	Metals	P6-SB-13 P6-SB-12	Completed 2 soil borings. VOCs detected below criteria in soil samples. SVOCs detected below criteria in soil samples. Metals detected in soil samples above DWP and/or GSI criteria. Metals and VOCs detected above DW and/or GSI in groundwater sample collected.	Further investigation activities required.	Area 5-6
6-19	Process Waste Tunnel	Runs underneath Building 28 and 21; exits Site to the west and continues to GM Lansing Plant 2	West of the Power Plant	15	Process Waste		Collected groundwater samples from nearby monitoring wells. VOCs and metals detected above DW and GSI criteria.	Further investigation activities required.	Area 10
6-30	New Weld Pit	18'x50'x4'	Building 18 QQ-10	4	Metals		Collected groundwater samples from nearby monitoring wells. Metals detected above DW criteria.	Further investigation activities required.	Collected groundwater sample from P6-SB-07
6-43	Stormceptor	Includes stormceptor oil and sediment separator	West of Building 15	15	Storm Water, Oil and Sediments		Collected groundwater samples from nearby monitoring wells. VOCs and metals detected above DW and GSI criteria.	Further investigation activities required.	Area 5-7 (still assessing)
6-47	Leaking Industrial Waste Line	N/A	Building 16 ZZ115	15	Process Waste	P6-SB-4	Completed 1 soil boring. No VOCs detected in soil samples. SVOCs detected in soil samples below criteria. No metals detected in soil samples above criteria.	Further investigation activities required.	Area 7
6-48	Former Coal Pile	Was replaced by Bldg. 28	Building 28 Whole Building	0	Coal	P6-SB-38 P6-SB-39	Completed 2 soil borings. VOCs and SVOCs not analyzed (no history of VOCs or SVOCs based on historical data or operations). No metals detected in soil sampled above criteria.	Further investigation activities required due to location of nearby AOIs requiring additional investigations.	Area 5-6
6-49	2nd Lacquer Booth	Associated with former paint shop	Building 10 Q-R/34-36	5	Paint and Thinner	P6-SB-20	Completed 1 soil boring. No VOCs detected in soil samples. SVOCs not analyzed (no history of SVOCs based on historical data or historical operations). Metals detected in soil samples above DWP and GSI criteria.	Further investigation activities required.	Area 5-8
6-59	Stormceptor	Includes stormceptor oil and sediment separator	South of Building 23	15	Storm Water		LNAPL present in Stormceptor associated with AOI 6-42.	Further investigation activities required at both AOI 6-42 and AOI 6-59.	Area 6
6-60	Paint Mix Room	N/A	Building 21 EEE-KKK/8-103	0	Paint and Thinner	P6-SB-30 P6-SB-31 P6-SB-32 P6-SB-41 (SA 5-5)	Completed 4 soil borings. VOCs detected in soil samples above DWP, GSI and SVII criteria. VOCs detected above DW & GSI in groundwater water sample. SVOCs and metals not analyzed (no history of SVOCs or metals based on historical data or operations).	Further investigation activities required.	Area 9
6-63	Sump	N/A	Building 20 NN21	5	Unknown		Collected groundwater samples from nearby monitoring wells. Metal exceedances detected.	Further investigation activities required.	Area 10
6-78	Former PCB Transformers	N/A	East of the Power Plant	0	PCBs Oil		Collected groundwater samples from nearby monitoring wells. No VOCs or SVOCs detected. No metals detected above criteria.	No further investigation activities required.	No Further Action

VOCs not detected in soil samples. Shake test results positive. SVOCs detected in soil samples below criteria. No metals detected in soil samples above criteria.	Further investigation activities required.	Near Area 9 Resampled temporary well P6-SB-7. Completed VAP-A9-RR242
Background Sampling	NA	NA	NA	NA	NA	P6-SB-3 P6-SB-9 P6-SB-10	Completed 3 soil borings. VOCs and SVOCs not analyzed (no history of VOCs or SVOCs based on historical data or past operations). Metals detected above DW and GSI in groundwater samples collected.	Further investigation activities required.	Installed bedrock well MW-12-3. Assessing Plant 3 outfall 3-005

Notes:

1. AOI's listed represent the complete list of AOI's requiring investigation activates as agreed upon between ARCADIS and MDEQ over multiple working sessions and RFI Matrix submittal and comment periods. This list of AOIs represents the final list as presented in the approved RFI Work Plan dated August 2011.

Footnotes

NA - not applicable
AOI - Area of Interest
Csat - Part 201 Soil Saturation Concentration Screening Levels
DC - Direct Contact Criteria
DWP - Drinking Water Protection Criteria
ft. - Feet
GSIP - Groundwater Surface Water Interface Protection
LNAPL - Light Non-Aqueous Phase Liquid
NA - Not Applicable
MDEQ - Michigan Department of Environmental Quality
PCBs - Polychlorinated biphenyls

PSIC - Particulate Soil Inhalation Criteria
SWMU - Solid Waste Management Unit
SVIIC - Soil Volatilization to Indoor Air Inhalation Criteria
SVOCs - Semi-Volatile Organic Compounds
VOCs - Volatile Organic Compounds
VSIC - Infinite Source Volatile Soil Inhalation Criteria
RC - restrictive covenant
RWC - Risk-based Redevelopment Worker Contact
TAL - target analyte list (for metals) - note: will include speciation of chromium (trivalent and hexavalent) where noted above
TCL - target compound list (for VOCs and SVOCs)

12			OB-52	-	0.0	
14				-	0.0	
16			11.0' - 15.0'	-	0.0	
18		CH- (16.5 - 21.0) CLAY high plasticity; trace fine sand, trace small pebbles, subangular; dry; stiff; gray (10YR 5/1)		-	0.0	
20				-	0.0	
22		SP- (21.0 - 24.5) SAND fine; well sorted; saturated; dark grayish brown (10YR 4/2)		-	0.0	
24				-	0.0	
26		CH- (24.5 - 29.2) CLAY high plasticity; trace fine sand, trace granules to small pebbles, angular; dry; stiff; gray (10YR 5/1)		-	0.0	
28				-	0.0	
30		SM- (29.2 - 30.0) SAND very fine; and silt; moist; dense; gray (10YR 5/1)		-	0.0	

Completion Notes: End Of Boring at 30' bgs hole filled with bentonite grout

- The indicated stratification lines are approximate in situ. The transitions between materials may be gradual.
- Boring backfilled with natural soils unless otherwise noted.

- The indicated stratification lines are approximate in situ.
The transitions between materials may be gradual.
- Boring backfilled with natural soils unless otherwise noted.

Completion Notes: End Of Boring at 30' bgs hole filled with bentonite grout

- The indicated stratification lines are approximate in situ. The transitions between materials may be gradual.
- Boring backfilled with natural soils unless otherwise noted.

Completion Notes: End of Boring at 30.0' bgs hole filled with bentonite grout

- The indicated stratification lines are approximate in situ.
The transitions between materials may be gradual.
- Boring backfilled with natural soils unless otherwise noted.

Boring Log .

Project No.: 01-4174-0

Boring No.: SB-A11-HJ7

Project Name: RACER Lansing Plants

Date Drilled: 9/7/12

Facility ID#:

Drill Rig: Geoprobe

Logged By: A.Villhauer

Sampling Method: Dual Tube DT325

Test 1	2.5E-05	NA	2.5E-05	2.5E-05	11-16	S	Silt
P3-SB-28							
Test 1	4.0E-04	NA	5.3E-04	4.7E-04	8-13	S	Fine to Medium Sand
Total Area Geometric Mean				1.8E-04	Plant 3		
MW-12-09							
Test 1	1.5E-02	NA	NA	1.5E-02	14-19	S	Fine Sand
Test 2	1.4E-02	NA	NA				
MW-12-17							
Test 1	3.6E-03	NA	NA	3.8E-03	9.5-14.5	C1	Fine to Medium Sand with Pebbles
Test 2	3.9E-03	NA	NA				
P2-SB-20							
Test 1	NA	NA	NA	NA	8-13		
Test 2	NA	NA	NA				
Total Area Geometric Mean				7.4E-03	Plant 2		

cm/s - centimeters per second

ft - feet

NA - not applicable

Screen Conditions

C1 - Well screen fully submerged under static conditions. Induced change in head lowered water table within screened interval. Minor filter pack drainage observed.

S - Well screen fully submerged during static and induced head conditions.

Well Ls Lw Rs Rb Rc DTW TD b '

All units in ft

L_s True screen length
L_w Length of water column in Well (TD-SWL)
R_s Screen radius
R_b Radius of filter Pack or borehole
R_c Casing radius
DTW Static depth to water
TD Total depth of well/screen from reference point
b Saturated thickness of aquifer

DTW Static depth to water

SAND, fine to medium, trace coarse sand to fine gravel; little silt and clay (14.4%) moist to dry; tan.

VAP-A5.7-MB257_5-6
SAND, fine to medium, little coarse sand; trace silt and clay (7.8%); gray.

VAP-A5.7-MB257_7.0-7.5
SAND, fine, little medium sand, trace coarse sand; trace silt and clay (6.6%); moist; gray.

VAP-A5.7-MB257_7.5-9.5
SAND, fine, some medium sand, trace coarse sand to fine gravel; trace silt and clay (4.9%) moist; yellowish brown.

VAP-A5.7-MB257_9.5-12
SAND, fine to medium, trace coarse sand to fine gravel; trace silt and clay (2.7%); moist; gray.

VAP-A5.7-MB257_12-13
SAND, fine, little medium to coarse sand, trace fine gravel; trace silt and clay (7.2%); dry to moist; gray.

VAP-A5.7-MB257_17-18
SAND, fine to medium, trace coarse sand to fine gravel; trace silt and clay (2.2%); moist; gray.

VAP-A5.7-MB257_22-23
SAND, fine to medium, trace coarse sand to fine gravel; trace silt and clay (2.8%); moist to dry; gray.

VAP-A5.7-MB257_23-24.5
CLAY and SILT (64.7%); some fine sand, trace medium sand; moist to wet; gray.

VAP-A5.7-MB257_27-28
SAND, fine, some medium sand, trace coarse sand to fine gravel; trace silt and clay (9.8%); moist to wet; gray.

VAP-A5.7-MB257_37-38
SAND, fine, some medium sand, little coarse gravel, trace coarse sand to fine gravel; trace silt and clay (2.1%); dry to moist; gray.

VAP-A5.7-MB257_44-44.5
SAND, fine, some medium sand, little fine gravel, trace coarse sand; trace silt and clay (3.0%); dry.

Sieve Analysis

Date Start/Finish: 6/4/2012 - 6/5/2012 Drilling Company: GeoServ Driller's Name: Emrick Drilling Method: Direct Push Sampling Method: 5.0' Dual Tube Rig Type: Geoprobe 8040 DT	Northing: 450104.19 Easting: 13065626.03 Casing Elevation: NA Borehole Depth: 56.0' bgs Surface Elevation: 872.89 Descriptions By: A. Westhuis	Well/Boring ID: VAP-A9-RR209 Client: RACER Trust Location: Lansing, MI
--	---	--

- VAP-A9-RR209_2-3**
SAND, fine, some medium sand, trace coarse sand to fine gravel; trace silt and clay (8.2%); dry to moist; brown.
- VAP-A9-RR209_7-8**
SAND, fine to medium, trace coarse sand to fine gravel; trace silt and clay (4.0%); moist to wet; tan.
- VAP-A9-RR209_12-13**
SAND, fine, some medium sand, trace coarse sand to fine gravel; some silt and clay (26.5%); moist; gray.
- VAP-A9-RR209_17-18**
SAND, fine to medium, trace coarse sand to fine gravel; little silt and clay (14.6%); moist; gray.
- VAP-A9-RR209_22-23**
SAND, fine to medium, little coarse sand, trace fine gravel; trace silt and clay (3.6%); dry to moist; gray.
- VAP-A9-RR209_27-28**
SAND, fine, trace medium to fine gravel; trace silt and clay (5.9%); dry to moist; pale brown.
- VAP-A9-RR209_28-28.5**
CLAY (54.1%); and SAND, fine, trace medium sand; dry to moist; gray.
- VAP-A9-RR209_28.5-30**
SAND, fine, trace medium sand; little silt and clay (13.0%) dry; light brownish gray.
- VAP-A9-RR209_31-32**
SAND, fine, trace medium sand to fine gravel; trace silt and clay (3.6%); dry; very pale brown.
- VAP-A9-RR209_35-36**
SAND, fine, some medium sand, trace coarse sand to fine gravel; little silt and clay (16.9%); moist; gray.
- VAP-A9-RR209_38-38.5**
SAND, fine, little medium sand, trace coarse sand to fine gravel; some silt and clay (20.6%); moist; grayish brown.
- VAP-A9-RR209_40-41**
SAND, fine, some medium sand, trace coarse sand to fine gravel; trace silt and clay (7.7%); moist; gray.
- VAP-A9-RR209_45-46**
SAND, fine, some medium sand, trace coarse sand to fine gravel; trace silt and clay (1.8%); moist; gray.
- VAP-A9-RR209_48-51**
SAND, fine, some medium sand, trace coarse sand to coarse gravel; trace silt and clay (0.7%); moist; gray.
- VAP-A9-RR209_54-55**
SAND, fine to medium, little coarse sand, trace fine gravel; trace silt and clay (0.5%); moist; gray.

Client: Arcadis - Brighton

Project: RACR Lansing Plants

Project Number: B0064481.2012.00105

Location: VAP-A9-RR209_28.5-30

Depth: 28.5-30.0

Sample Number: 1206126-07

Material Description: Sand

Date Sampled: 06/05/2012

Date Received: 06/07/2012

Date Tested: 06/11/2012

Testing Remarks: Testing Procedure: ASTM D422-63 (07)

Percent Moisture: 6.05%

Weight Dry Solids (grams): 307.79

Tested by: ALW

Checked by: MAS

Project No.: 021522 Project: GM Plant No. 3, Lansing Location: MW-02-02, ST-2, 30.5-31'	Remarks: MTC Sample No. 86958 Fig. No.: _____
Date: 11-25-02 GRAIN SIZE DISTRIBUTION TEST REPORT MATERIALS TESTING CONSULTANTS	

The graph shows a grain size distribution curve for a soil sample. The y-axis represents 'PERCENT FINER' from 0 to 100. The x-axis represents 'GRAIN SIZE - mm' on a logarithmic scale from 200 to 0.001. The curve starts at 100% finer for 200 mm and decreases as grain size decreases, passing through approximately 95% finer at 10 mm, 85% finer at 1 mm, 50% finer at 0.1 mm, and 15% finer at 0.075 mm.

1. Introduction

This exposure pathway analysis was completed for the Revitalizing Auto Communities Environmental Response (RACER) Trust Lansing Plants 2, 3, and 6 (Site) as part of the Resource Conservation and Recovery Act (RCRA) Facility Investigation (RFI) Phase 2 Investigation Summary Report. It was prepared to identify receptors, potentially complete exposure pathways, and relevant and applicable Michigan Department of Environmental Quality (MDEQ) Part 201 promulgated criteria and draft MDEQ pathway-specific screening levels for comparison to soil, groundwater, and soil gas data collected at the Site. In addition, the pathway analysis and Site data screening evaluation will be used to determine areas of the Site that require exposure controls.

In general, Site conditions are such that the general exposure pathway conceptual site model (EPCSM) for all three plants is the same (e.g., current land use, concrete and asphalt cover over a portion of each plant, areas within each plant where shallow perched groundwater is encountered within the top 10 feet, similar off-site land uses). In addition, the anticipated future use of all three plants is for nonresidential (likely industrial) use. Several Restrictive Covenants have been filed with the deeds for the plants, as discussed in Section 2.2; however, these cover very limited areas of the Site. Therefore, one general EPCSM was developed for the Site assuming that under current conditions, no pathways have been adequately restricted and a second EPCSM was developed assuming that certain pathways would be eliminated through the placement of Restrictive Covenants on the Site, as determined through the screening evaluation.

The Site was used for industrial purposes for more than 70 years until buildings and other features were razed/removed beginning in 2007 to prepare the property for redevelopment. Currently, most of the ground surface is covered with concrete, asphalt and/or portions of the former industrial buildings (e.g., foundations, basements). There are limited areas with exposed vegetation, and there are no natural habitats or wetland areas on the Site. The anticipated future land use at the Site is industrial, and the Site is not anticipated to be redeveloped with significant areas that could serve as habitat for ecological receptors. Potential natural habitats are disturbed or non-existent. Based on current Site conditions and anticipated future land use, there are no ecological receptors identified for further evaluation at the Site.

Conditions at the Site were evaluated within the context of the current MDEQ-promulgated criteria (MDEQ 2012b); however, for shallow groundwater and soil gas, the draft screening levels for vapor intrusion (MDEQ 2012a) were used for comparison.

2. Exposure Assessment

Adverse health effects associated with constituents in environmental media can only occur if there is exposure. The objective of this exposure assessment is to identify pathways by which exposure may occur and to estimate the magnitude, frequency, duration, and routes of exposure that can reasonably be

anticipated for humans, based on the Site conditions. The information from this assessment is then used to estimate the amount of exposure that receptors may receive under the current and future anticipated conditions at the Site. This amount of exposure can then be compared to guidelines or standards, or it can be used to calculate media concentrations that can then be compared to environmental data. This can be used to provide insight into the potential for adverse health effects to occur under the conditions being evaluated.

MDEQ provides media-specific, receptor-specific, pathway-specific criteria that can be used to screen environmental data. Relevant criteria are selected based on the information summarized in the exposure assessment.

2.1 Exposure Pathways

An exposure pathway defines a probable path by which a receptor may come into contact with affected media. For an exposure pathway to be complete and exposure to occur, the following four elements must be present:

- A source and mechanism of chemical release
- A retention and/or transport medium
- A point of contact with the medium
- A route of exposure (e.g., inhalation, ingestion, dermal contact)

There must be a complete exposure pathway from the source to human receptors for chemical intake to occur. If any one of the four elements is missing, the exposure pathway is incomplete, and exposure will not occur.

An EPCSM was developed for the Site and adjacent properties to summarize the current understanding of the sources of constituents of concern (COCs), the means by which they are released and transported within and among media, and the exposure pathways and routes by which they may contact human receptors (see Figure G-1). These elements are discussed briefly in the following sections.

2.1.1 Potential Sources of Constituents

Potential sources of constituents at the Site are related to historical Site activities, which are assumed to have contributed COCs to environmental media. The Site is approximately 250 acres, with Plant 2 being approximately 63 acres, Plant 3 being approximately 104 acres, and Plant 6 being approximately 72 acres).

Areas of Interest (AOIs) were identified in the Current Conditions Report (ARCADIS 2008) and investigation activities were completed in the AOIs as part of the RFI Phase 1 investigation. Based on the results of the RFI Phase 1, described in the RFI Phase 1 Activities Summary Report (ARCADIS 2012a), additional Investigation Areas (Areas 1 through 21) were identified and evaluated in the RFI Phase 2 investigation, as described in the RFI Work Plan, Phase 2 (ARCADIS 2012b), and the Section 4 of the main text. Locations of the AOIs and Investigation Areas are shown on Figures 2 and 3 of the main document. Available historical data from each of these areas are discussed in the Current Conditions Report (ARCADIS 2008), the RFI Phase 1 Activities Summary Report (ARCADIS 2012a), and the main text of this report.

Industrial operations are no longer occurring at the Site, and residual COCs in soil and groundwater identified during the above listed investigations were evaluated as potential sources to other environmental media. There are no current activities at the Site identified as sources of additional contamination.

2.1.2 Transport Mechanisms

Migration pathways are processes by which constituents in an affected medium (i.e., soil, groundwater, or soil gas) are transported within that medium and/or between media. The pertinent migration pathways for soil, groundwater, and soil gas at the Site are discussed below:

- **Migration of Constituents from Soil to Perched Shallow Groundwater:** The infiltration of precipitation into impacted soils, the potential for the precipitation to flow through these soils, and subsequent leaching into groundwater may result in the transfer of constituents in the soil to pore space water and ultimately to groundwater. This pathway is relevant to conditions at the Site and potentially complete.
- **Migration of Constituents through Perched Shallow Groundwater:** Constituents can migrate in groundwater through two main mechanisms: gross fluid movement and dispersion. Gross fluid movement includes the movement of the groundwater itself. Dispersion occurs when there is fluid mixing and/or diffusion. The rate of migration is dependent upon aquifer characteristics and the chemical and physical characteristics of the constituent. This pathway is relevant to conditions at the Site and is potentially complete.
- **Migration of Constituents from Shallow Groundwater to Deeper Aquifers:** Constituents can migrate in groundwater through two major mechanisms: gross fluid movement and dispersion. Gross fluid movement includes the movement of the groundwater itself. Dispersion occurs when there is fluid mixing and/or diffusion. The rate of migration is dependent on aquifer characteristics and the chemical and physical characteristics of the constituent. Because the Site is located in a Wellhead Protection Area, this pathway is potentially complete.

- **Migration of Constituents from Soil to Ambient Air:** The transfer of volatile constituents present in soil to the air may occur through volatilization and subsequent migration (surface and subsurface soil) to the ground surface. This pathway is relevant to conditions at the Site and potentially complete.
- **Migration of Constituents from Soil and Shallow Groundwater to Indoor Air:** The transfer of volatile constituents present in soil and groundwater under and around a building to the air may occur through volatilization and subsequent migration into a building through cracks in the subsurface foundation. Currently, there are no buildings present on the Site; however, it is likely that the Site will be redeveloped in the future. Therefore, this pathway is relevant to future anticipated conditions at the Site and is potentially complete.
- **Migration of Constituents from Soil and Shallow Groundwater to Surface Water:** Constituents can leach from soil to groundwater and then through the groundwater to surface water. Several storm drains that ultimately discharge to the Grand River are present at the Site. Therefore, this pathway is potentially relevant and is potentially complete.
- **Movement of Constituents in Surface Soil:** Agitation of the surface soils can result in the generation of fugitive particulate emissions to ambient air. Under current conditions, most of the Site is covered by structures. This pathway was identified as relevant and potentially complete under current or potential future conditions; therefore, was further evaluated.
- **Migration of Constituents from Soil Gas to Indoor or Ambient Air:** Vapors in the soil can migrate to ambient and indoor air. This pathway is relevant to conditions at the Site and potentially complete; therefore, it was further evaluated.

2.1.3 Land Use and Potentially Exposed Populations

2.1.3.1 Potential Exposure for On-site Populations

The Site is partially located within the City of Lansing Well Head Protection Area and partially within the Township of Lansing Well Head Protection Area. A map of the Site showing the approximate plant locations and the City of Lansing and Township of Lansing Well Head Protection Areas is included as Figure 7 of the main document.

Currently, the Site is vacant, completely surrounded by fencing, and all of the buildings have been demolished. The Site is currently zoned as heavy industrial according to the City of Lansing and Township of Lansing Zoning Maps, previously included as Appendix A of the Current Conditions Report (ARCADIS 2008). It is anticipated that the Site will be redeveloped for nonresidential (industrial) use in the future.

Residential uses will be restricted through the placement of Restrictive Covenants on the properties. For the screening evaluation, it was assumed that the Site will remain nonresidential.

Based on the future anticipated land use of the Site, potentially exposed populations on Site include:

- Routine workers
- Maintenance workers
- Patrons of the future businesses and trespassers
- Construction and utility workers

Routine workers consist of people who typically spend most of the work day indoors conducting industrial or commercial activities. As noted above, routine workers are currently not present at Plants 2, 3, or 6. Future routine workers could be exposed to volatile constituents in soil or in shallow groundwater via vapor migration into indoor air in locations where buildings exist in the future. The exposure of such workers to groundwater via potable or non-potable use is not likely, as there are currently no on-site groundwater withdrawal wells for potable or non-potable uses. In addition, RACER plans to implement a Restrictive Covenant on Site to prohibit any groundwater use in the future. The drinking water pathway was assumed to be incomplete on the Site in the screening evaluation. When outdoors intermittently, routine workers can be exposed to surface soil in areas currently without cover (e.g., pavement, buildings) or in areas where cover may be removed and left uncovered in the future, as well as volatiles and particulates in ambient air.

Maintenance workers are those who may conduct occasional subsurface construction or maintenance activities (i.e., installation or repair of underground utilities, removal or repair of pavement, repair or maintenance of stormwater management systems). The depth at which groundwater is encountered varies significantly across the Site (from 5 to 30 feet below ground surface [bgs]). Subsurface activities could result in exposures to subsurface soil and perched water in some locations. Greater area-specific information is provided in Section 3.1 of the main text. Potential exposure to sediment and water are possible during repair or maintenance of stormwater management drains.

As with routine workers, patrons of future businesses and trespassers could be potentially exposed to surface soil in areas currently without cover or in areas where cover may be removed in the future and left uncovered, and volatiles and particulates in ambient air. However, the magnitude of exposures for future patrons and trespassers is expected to be significantly less than that for routine workers.

Facility decommissioning and demolition activities have been and may be conducted at Plants 2, 3, and 6. As a result, a construction worker may be exposed to surface soil in areas that are uncovered or may

become uncovered in the future. Given that decommissioning and demolition activities may also include subsurface activities, such as slab and soil removal, construction workers also may be exposed to subsurface soil and shallow groundwater.

2.1.3.1.1 Restrictive Covenants in Place on the Site

A few small areas at the Site currently have deed restrictions that serve as exposure controls; however, the screening evaluation was completed for the entire Site and did not consider the restrictions within these limited areas. The areas that are currently restricted are listed below.

- Plant 2 AOI 2-25 Building 225 Underground Storage Tank (UST) Farm: Impermeable surface required, no wells allowed, no residential zoning allowed, vapor barriers required, soil management.
- Plant 2 AOI 2-16 Building 250 UST Farm: Impermeable surface required, no wells allowed, no residential zoning allowed.
- Plant 3 AOI 3-9 Building 301 UST Farm: Impermeable surface required, no wells allowed, no residential zoning allowed, vapor barriers required.
- Plant 6 AOI 6-16 Tanks 5 and 6: Soil management plan required if soil is to be excavated from this area.
- Plant 6 AOI 6-17 Tanks 1 – 4: Soil management plan required if soil is to be excavated from this area.
- Plant 6 AOI 6-91 Dock 9 Hydraulic Oil Release: Impermeable surface required; soil management plan required if soil is to be excavated from this area.

The existing restrictions can be found in Appendix H of the Current Conditions Report (ARCADIS 2008).

2.1.3.2 Potential Exposure for Off-site Populations

Local land use for the areas adjacent to the Site is mixed, as described in the Preliminary Assessment / Visual Site Inspection (PRC Environmental Management Inc. 1994a, 1994b). The CSX railroad runs north to south along the eastern side of Plant 3 and between Plants 2 and 6. Saginaw Street runs east to west between Plant 3 and Plants 2 and 6. Plant 3 is bordered to the north by St. Joseph Cemetery, several businesses, and residential properties. Two parks and several businesses are located to the east of Plant 3, and businesses and residential properties are located to the west of Plant 3. Residential neighborhoods are also present east of Plant 6, west of Plant 2, and south of Plants 2 and 6. Sexton High School is present south of Plant 6. The Site and surrounding areas are shown on Figure 1 of the main document. Zoning of

these adjacent properties is business and residential, as shown on the previously submitted zoning maps included as Appendix A of the Current Conditions Report (ARCADIS 2008).

The potentially exposed populations in off-site areas include:

- Residents
- Routine workers
- Maintenance workers
- Students and recreational users

Off-site residents and routine workers may be exposed to constituents in soil from the Site via direct contact with impacted soil and due to windblown dust and vapors emanating from areas on the Site currently without cover or from areas which may be uncovered in the future. Off-site residents may also be exposed to volatile constituents in shallow groundwater via vapor migration into indoor air. Although there are currently no private potable wells within a ¼-mile radius of the Site and municipal water is available, portions of the Site and surrounding areas are located within the City of Lansing and Lansing Township Wellhead Protection Areas, and there is no ordinance in place that prohibits the installation of potable wells. Therefore, the EPCSM considers potential potable and non-potable use of groundwater in the future. In addition, as stated in Section 2.1.3.1 of this appendix and depicted on Figure 7 of the main document, municipal water supply wells used to obtain potable water for the City of Lansing Board of Water and Light are present off Site. The closest municipal water supply well is located 200 feet north of Plant 3.

Off-site maintenance works, in addition to being exposed to soil constituents via wind-blown dust and vapors from areas at the Site (as described for residents and routine workers above), may contact shallow soil and shallow groundwater during occasional subsurface construction or maintenance activities (i.e., installation or repair of underground utilities, or removal or repair of pavement).

Students and recreational users of the nearby parks may be exposed to constituents in ambient air or windblown dust; however, the magnitude of exposure for off-site students and recreational users is expected to be significantly less than for off-site residents, since residents are assumed to be present 24 hours a day for 350 days per year. Therefore, students and recreational users were not further evaluated in the screening evaluation.

2.1.4 Potentially Complete Exposure Pathways On-site

Exposure pathways that could be potentially complete for on-site populations were evaluated for soil, groundwater, and soil gas, as described below.

2.1.4.1.1 Soil

The following pathways were considered to be potentially complete for on-site soil:

- Direct contact with impacted soil, including dermal contact and incidental ingestion.
- Inhalation of volatile constituents in the ambient air emanating from impacted soils.
- Inhalation of volatile constituents migrating from soil to indoor air (of future buildings).
- Inhalation of constituents in impacted fugitive dust.
- Soil impacts leaching to groundwater that is used as a drinking water source.
- Soil impacts leaching to shallow groundwater and subsequent groundwater contact for subsurface activities.
- Soil impacts leaching to shallow groundwater and subsequent flow to nearby surface water.

2.1.4.1.2 Groundwater

Potentially complete exposure pathways for on-site groundwater include the following:

- Direct contact with shallow groundwater (construction and utility workers only).
- Inhalation of volatile constituents volatilizing from groundwater and migrating to indoor air (of future buildings).
- Impacts to surface water from the shallow groundwater.

2.1.4.1.3 Soil Gas

Potentially complete exposure pathways for on-site soil gas include inhalation of impacted soil gas migrating into future buildings.

2.1.4.2 Potentially Complete Exposure Pathways Off-site

Exposure pathways that could be potentially complete for off-site populations were evaluated for soil, groundwater, and soil gas, as described below.

2.1.4.2.1 Soil

Although it is unlikely that on-site soil impacts have migrated significant distances off-site, the following pathways were considered to be potentially complete for off-site soil:

- Direct contact with impacted soil, including dermal contact and incidental ingestion.
- Inhalation of volatile constituents in the ambient air emanating from impacted soils.
- Inhalation of volatile constituents migrating from impacted soil to indoor air (of future buildings).
- Inhalation of constituents in impacted fugitive dust.
- Soil impacts leaching to groundwater that is used as a drinking water source.
- Soil impacts leaching to shallow groundwater and subsequent groundwater contact for subsurface activities.
- Soil impacts leaching to shallow groundwater and subsequent flow to nearby surface water.

2.1.4.2.2 Groundwater

Potentially complete exposure pathways for off-site groundwater include the following:

- Ingestion of impacted groundwater used as a drinking water source. The Site and surrounding areas are located within the City of Lansing Wellhead Protection Area.
- Direct contact with shallow groundwater (construction and utility workers only).

- Inhalation of volatile constituents volatilizing from groundwater and migrating to indoor air (of future buildings).
- Impacts to surface water from the shallow groundwater.

2.1.4.2.3 Soil Gas

Potentially complete exposure pathways for on-site soil gas migrating to off-site properties include inhalation of impacted soil gas migrating into buildings.

2.2 Relevant and Applicable MDEQ Criteria

The following sections summarize the MDEQ Part 201 criteria that were determined to be relevant and applicable to the Site and off-site properties and that were therefore used to evaluate conditions. Criteria were identified based on the information summarized in the exposure assessment presented above and summarized in the EPCSM for current use (Figure G-1) and anticipated future land use with consideration of planned deed restrictions (Figure G-2).

Based on the screening evaluation (presented in Section 5 of the main text), Restrictive Covenants will be proposed for the Site to the extent practicable to eliminate unacceptable exposures to soil, groundwater, and soil gas impacts. Land use will be restricted to nonresidential uses, institutional controls (i.e., no use of groundwater) will be implemented, and engineering controls (i.e., vapor barriers on future buildings) will be required, as needed. The EPCSM, which considers the use of Restrictive Covenants to eliminate unacceptable exposures, is presented on Figure G-2.

2.2.1 Soil

Soil data have been collected on Site at Plants 2, 3, and 6 and at various off-site locations. The following table summarizes the relevant and applicable criteria for on-site and off-site soil based on current conditions and for future conditions, where it is assumed Restrictive Covenants have been placed on the Site to control potential unacceptable exposures. For inorganic constituents, if the available Statewide Default Background Level was greater than a criterion, then the pathway-specific criterion defaults to the Statewide Default Background Level.

Table 1. Summary of Relevant and Applicable Soil Criteria

Criteria	Current Conditions		Anticipated Future Conditions	
	On-site Soil	Off-site Soil	On-site Soil	Off-site Soil
Drinking Water Protection Criteria (a)	NPC	R & A (Res)	NPC (d)	R & A (Res)
Groundwater Surface Water Interface Protection Criteria (b)	R & A	R & A	R & A	R & A
Groundwater Contact Protection Criteria	R & A	R & A	NPC (d)	R & A
Soil Volatilization to Indoor Air Inhalation Criteria	R & A (NR)	R & A (Res)	NPC (d)	R & A (Res)
Infinite Source Volatile Soil Inhalation Criteria (c)	R & A (NR)	R & A (Res)	R & A (NR)	R & A (Res)
Particulate Soil Inhalation Criteria (c)	R & A (NR)	R & A (Res)	R & A (NR)	R & A (Res)
Direct Contact Criteria	R & A (NR)	R & A (Res)	NPC (d)	R & A (Res)
Soil Saturation (Csat) Levels	R & A	R & A	R & A	R & A

Notes:

NPC – not potentially complete

NR – nonresidential

R & A – Relevant and Applicable

Res – residential

(a) Because the Site is located within a Wellhead Protection Area, the residential DWP Criteria are applicable and relevant.

(b) For select metals, the Groundwater Surface Water Interface Protection Criteria are dependent on the water hardness of the receiving water body. Site-specific criteria were based on a hardness value of 257 milligrams per liter (mg/L) as calcium carbonate, based on the average of data available for the Grand River both upstream and downstream of the Site (MDEQ 2005, 2007b).

(c) Following recommendations in MDEQ Operational Memorandum Number 1 (Op Memo No. 1), Attachment 7 (MDEQ 2007a), the residential and nonresidential Infinite Source Volatilization to Indoor Air Inhalation and Particulate Soil Inhalation Criteria were adjusted by a factor of 0.43 to account for a potential source area size of 100 acres, which is roughly equal to or greater than the size of each plant.

(d) Pathway will be restricted as needed based on results of the screening level evaluation.

2.2.2 Groundwater

The following table summarizes the relevant and applicable criteria for on-site and off-site groundwater under current conditions and for future conditions based on anticipated Restrictive Covenants.

Table 2. Summary of Relevant and Applicable Groundwater Criteria

Criteria	Current Conditions		Anticipated Future Conditions	
	On-site Groundwater	Off-site Groundwater	On-site Groundwater	Off-site Groundwater
Drinking Water Criteria (a)	NPC	R & A (Res)	NPC (e)	R & A (Res)
Groundwater Surface Water Interface Criteria (b)	R & A	R & A	R & A	R & A
Groundwater Contact Criteria	R & A	R & A	NPC (e)	R & A
Groundwater Volatilization to Indoor Air Inhalation Criteria (c)	R & A (NR)	R & A (Res)	NPC (e)	R & A (Res)
Draft Groundwater Concentrations for Vapor Intrusion (GW_{VI-res} and GW_{VI-nr}) (d)	R & A (NR)	R & A (Res)	NPC (e)	R & A (Res)
Acute Inhalation Screening Levels	R & A	R & A	R & A	R & A
Flammability and Explosivity Screening Levels	R & A	R & A	R & A	R & A
Water Solubility Levels	R & A	R & A	R & A	R & A

Notes:

NPC – not potentially complete

NR – nonresidential

R & A – Relevant and Applicable

Res – residential

(a) Because the Site is located within a Wellhead Protection Area, the residential Drinking Water Criteria are applicable and relevant.

(b) For select metals, the Groundwater Surface Water Interface Criteria are dependent on the water hardness of the receiving water body. Site-specific criteria were based on a hardness value of 257 mg/L as calcium carbonate, based on the average of data available for the Grand River both upstream and downstream of the Site (MDEQ 2005, 2007b).

(c) These criteria are only applicable for groundwater deeper than 3 meters (approximately 10 feet) bgs.

(d) These draft screening levels (MDEQ 2012a) were used to evaluate the vapor intrusion pathway for groundwater encountered at a depth of less than 3 meters (approximately 10 feet) bgs.

(e) Pathway will be restricted as needed based on results of the screening level evaluation.

2.2.3 Soil Gas

Soil gas samples have been collected at the Site from four locations located near the property boundaries. The following table summarizes the relevant and applicable draft screening levels for soil gas under current conditions and for future conditions based on anticipated Restrictive Covenants. As a conservative screening estimate, the on-site soil gas data were used to evaluate potential off-site receptors.

Table 3. Summary of Relevant and Applicable Soil Gas Criteria

Criteria	Current Conditions		Anticipated Future Conditions	
	On-site Receptors	Off-site Receptors	On-site Receptors	Off-site Receptors
Draft Soil Gas Concentrations for Vapor Intrusion	R & A (NR)	R & A (Res)	NPC (a)	R & A (Res)

Notes:

NPC – not potentially complete

NR – nonresidential

R & A – Relevant and Applicable

Res – residential

(a) Pathway will be restricted as needed based on results of the screening level evaluation

2.3 Constituents Lacking Criteria

Ten constituents were detected in soil and/or groundwater samples that lack promulgated or draft MDEQ Part 201 criteria. Data for these constituents are included in Tables 12 through 17 of the main document, and sample locations are shown on Figures 15 and 16 of the main document. Table G-4 provides a summary of the constituents, the frequency of detection across the three plants combined, the maximum detected concentrations, the Investigation Areas in which the constituents were detected, and the rationale for why each constituent was not evaluated further.

The data were evaluated for frequency of detection, magnitude of detection, and locations (i.e., co-located detections with other COCs and delineation) to determine whether additional evaluation should be completed for the detected constituents lacking criteria. If relevant criteria from other reliable sources, such as the U.S. Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) (USEPA 2012), were available to further put levels detected in perspective, these were also reference and considered (e.g. Tapwater RSL¹, Industrial Soil direct contact²). In addition, any corrective measures, including remedial actions (removal or treatment) and the placement of Restrictive Covenants (institutional or engineering controls), will address the identified COCs as well as the constituents lacking criteria.

Information for each constituent is detailed in Table G-4 and briefly summarized below.

¹ The RSL for Tapwater accounts for ingestion of, dermal contact with, and inhalation of vapors during household use of impacted groundwater. RSLs based on carcinogenic effects were multiplied by 10 to account for a target risk of 1×10^{-5} to be consistent with the MDEQ.

² The RSL for Industrial Soil direct contact accounts for incidental ingestion of, dermal contact with, and inhalation volatiles and particulates from impacted soil. RSLs based on carcinogenic effects were multiplied by 10 to account for a target risk of 1×10^{-5} to be consistent with the MDEQ.

- 2-Nitroaniline, 4-nitrophenol, and bis(2-chloroethoxy)methane were not detected in groundwater and were only detected one time in soil at relatively low concentrations (40 micrograms per kilogram [$\mu\text{g}/\text{kg}$], 50 $\mu\text{g}/\text{kg}$, and 350 $\mu\text{g}/\text{kg}$, respectively). These detections were delineated by multiple samples collected in within approximately 100 feet of the detections. Due to the low frequencies of detection (less than 0.1 percent), maximum detections below the RSLs, and locations of the detections, these constituents were not identified as COCs and additional evaluation is not warranted.
- Methyl acetate was detected in three soil samples and was not detected in groundwater. Soil concentrations were relatively low (maximum detection of 1.810 $\mu\text{g}/\text{kg}$). The detections are delineated non-detect by several soil borings within 150 feet of each detection. Due to the low frequency of detection (<1 percent), the maximum detection below the RSL for direct contact, and locations of the detections, methyl acetate was not identified as a COC and additional evaluation is not warranted.
- 2,2'-Oxybis(1-chloropropane) was not detected in soil and was detected only one time in groundwater at a relatively low concentration (1 microgram per liter [$\mu\text{g}/\text{L}$]). In addition, the detection is delineated to non-detect by several monitoring wells within 100 feet. Due to the low frequency of detection, maximum detection below adjusted RSL for Tapwater, and location of the detection, 2,2'-oxybis(1-chloropropane) was not identified as a COC and additional evaluation is not warranted.
- Benzaldehyde was detected in two soil samples and three groundwater samples at relatively low concentrations (maximum soil detection of 1,400 $\mu\text{g}/\text{kg}$ and maximum groundwater detection of 2 $\mu\text{g}/\text{L}$) that are well below the RSLs for Industrial Soil direct contact and Tapwater. The detections of soil are delineated to non-detect by several soil borings within 100 feet, and the detections in groundwater are delineated to non-detect or are well below the Tapwater RSL. Due to the low frequencies of detection in soil and groundwater, the relatively low concentrations, and the locations of the detections, benzaldehyde was not identified as a COC and additional evaluation is not warranted.
- 1,1-Biphenyl was detected in 12 soil samples and in two groundwater samples a relatively low concentrations (maximum detection in soil of 4,000 $\mu\text{g}/\text{kg}$ and in groundwater of 20 $\mu\text{g}/\text{L}$). The maximum soil detection is below the Industrial Soil RSL. The soil and groundwater detections are delineated by several soil borings and monitoring wells within 100 feet of the detections, and impacts do not extend off Site. Due to the low frequencies of detection, relatively low magnitude of detections, and the fact that on-site groundwater is not currently used and future use will be prohibited through a Restrictive Covenant, 1,1-biphenyl was not identified as a COC and additional evaluation is not warranted.
- 1-Methylnaphthalene was detected in one soil sample and one groundwater sample at relatively low concentrations (maximum detection in soil of 500 $\mu\text{g}/\text{kg}$ and in groundwater of 2 $\mu\text{g}/\text{L}$) that were below the RSL for Industrial Soil direct contact and the adjusted Tapwater RSL. The detections were in Area 17 and were co-located with other polycyclic aromatic hydrocarbons (PAHs) adjacent to the non-

aqueous phase liquid-impacted area. Corrective measures taken to control exposures to other COCs (PAHs) in this area will also control exposures to 1-methylnaphthalene. The detections are delineated to non-detect by samples collected in multiple soil borings and monitoring wells within 100 feet of the detections within the property boundary. Based on detections that are co-located with other PAH impacts and that are below the RSLs for Tapwater and Industrial Soil, 1-methylnaphthalene was not identified as a COC and does not warrant additional evaluation.

- Cyclohexane was detected in 29 soil samples and in 16 groundwater samples. Cyclohexane is not included in the promulgated MDEQ Part 201 criteria tables, however, there are draft vapor intrusion screening levels. The maximum detection of cyclohexane in groundwater did not exceed the MDEQ draft residential or nonresidential Groundwater Concentrations for Vapor Intrusion (GW_{VI-nr}), or the RSL for Tapwater. The detections of cyclohexane in soil in Investigation Areas 5-4, 5-6, 5-7, and 10 were relatively low (less than 300 micrograms per kilogram [$\mu\text{g}/\text{kg}$]). The detections of cyclohexane in Areas 7, 9, and 17 were elevated; however, they were co-located with other petroleum impacts. The detections of cyclohexane in soil were below the RSLs for Industrial Soil direct contact. Detections have been delineated in soil and groundwater within the Site boundaries. Based on the detections being below the RSLs for Industrial Soil and Tapwater, low magnitudes of detection in Investigation Areas 5-4, 5-6, 5-7, and 10, and the co-located impacts in Areas 7, 9, and 17, cyclohexane was not identified as a COC and additional evaluation is not warranted.
- Methylcyclohexane was detected in 62 soil samples and 17 groundwater samples. The detections of methylcyclohexane in groundwater were relatively low (maximum of 51 micrograms per liter [$\mu\text{g}/\text{L}$])³. In general, the magnitude of soil detections in Investigation Areas 1, 5-3, 5-4, 5-5, 5-6, 5-7, 8, 10, and 16 were relatively low (maximum of 2,400 $\mu\text{g}/\text{kg}$), with the higher detections being co-located with other petroleum impacts that are anticipated to be addressed through corrective measures. The detections of methylcyclohexane in soil in Investigation Areas 7, 9, and 17 were higher; however, the detections were co-located with other petroleum impacts. The detections of methylcyclohexane in soil and groundwater have been delineated to non-detect by samples collected in nearby soil borings within the Site boundaries. Corrective measures such as exposure barriers and institutional controls designed to address the co-located petroleum impacts will also address the methylcyclohexane impacts. Based on the magnitudes of detections and co-located impacts, methylcyclohexane was not identified as a COC and does not warrant further evaluation.

Based on the above evaluation, none of the constituents lacking MDEQ criteria were identified as COCs for further evaluation.

³ Although no longer used by USEPA, the 2004 USEPA Region 9 Preliminary Remediation Goal (PRG) for Tapwater was 5,200 $\mu\text{g}/\text{L}$ and the Industrial Soil PRG was 8,700,000 $\mu\text{g}/\text{kg}$. Currently, the USEPA does not provide RSLs and indicates that there is inadequate data to develop toxicity values (USEPA 2013).

Table 4. Summary of Constituents Lacking MDEQ Part 201 Criteria

Exposure Pathway Analysis
RACER Plants 2 and 3, Lansing, Michigan

Constituent	Soil		Groundwater		Plants and Areas Detected	Rational for not evaluating further
	FOD (%)	Detect (µg/kg)	FOD (%)	Detect (µg/L)		
2-Nitroaniline	1/1115 (0.09%)	40	0/318 (0%)	ND	Plant 2 - Area 8	- Not likely Site-related - FOD below 0.1% and not regulated as carcinogen - Delineated to non-detect by 5 soil borings within 25 feet - Detection is well below the USEPA Industrial Soil Direct Contact RSL of 6,000,000 µg/kg
bis(2-Chloroethoxy)methane	1/1115 (0.09%)	350	0/318 (0%)	ND	Plant 2 - Area 8	- Not likely Site-related - FOD below 0.1% and not regulated as carcinogen - Delineated to non-detect by 5 soil borings within 25 feet - Detection is well below the USEPA Industrial Soil Direct Contact RSL of 1,800,000 µg/kg
4-Nitrophenol	1/1110 (0.09%)	50	0/317 (0%)	ND	Plant 2 - Area 5-2	- Not likely Site-related - FOD below 0.1% and not regulated as carcinogen - Delineated to non-detect by 13 soil borings within 100 feet
Methyl acetate	3/624 (0.5%)	1,810	0/255 (0%)	ND	Plant 2 - Areas 5-1, 5-2 Plant 6 - Area 7	- Not likely Site-related - FOD below 1% and not regulated as a carcinogen - Detections delineated to non-detect within 150 feet by multiple soil borings - Detection is well below the USEPA Industrial Soil Direct Contact RSL of 1,000,000,000 µg/kg
2,2'-Oxybis(1-chloropropane)	0/1115 (0%)	ND	1/318 (0.3%)	1	Plant 3 - Area 17	- Not likely Site-related - FOD below 1% - Delineated to non-detect by at least 10 monitoring wells within 100 feet - Detection is below the USEPA Tapwater RSL of 3.1 µg/L (adjusted for an ELCR of 1×10^{-5} to be consistent with MDEQ)
Benzaldehyde	2/1115 (0.2%)	1,400	3/318 (0.9%)	2	Plant 2 - Area 5-2 Plant 3 - Area 18 Plant 6 - Areas 5-7, 5-8 (north), 10	- Not likely Site-related - FOD below 1% - Detections are all well below the USEPA Industrial Soil Direct Contact RSL of 100,000,000 µg/kg and the Tapwater RSL of 1,500 µg/L - Detections in soil delineated to non-detect by several soil borings or monitoring wells within 100 feet of the detections. Detections in groundwater delineated to non-detect or are below the USEPA Tapwater RSL (detected in groundwater at the reporting limit of 1 µg/L at Monitoring Well MW-12-12 in Plant 6).
1,1-Biphenyl	12/1115 (1%)	4,000	2/318 (1%)	20	Plant 2 - Areas 1, 5-2, 5-3, 5-5 Plant 3 - Area 17 Plant 6 - Area 9	- FOD for soil at 1% and for groundwater at 0.6% - Detections delineated to non-detect by several soil borings or monitoring wells within 100 feet of each detection - Detections in soil are below the USEPA Industrial Soil Direct Contact RSL of 210,000 µg/kg - Detections in groundwater are above the USEPA Tapwater RSL of 0.83 µg/L; however, on-site groundwater use will be prohibited through a Restrictive Covenant and impacts do not extend off-site

Table 4. Summary of Constituents Lacking MDEQ Part 201 Criteria

Exposure Pathway Analysis
RACER Plants 2 and 3, Lansing, Michigan

Constituent	Soil		Groundwater		Plants and Areas Detected	Rational for not evaluating further
	FOD (%)	Detect (µg/kg)	FOD (%)	Detect (µg/L)		
1-Methylnaphthalene	1/54 (2%)	500	1/9 (11%)	2	Plant 3 - Area 17	- Detections delineated to non-detect by multiple soil borings and monitoring wells within 100 feet - Detections are below the USEPA Industrial Soil Direct Contact RSL of 530,000 µg/kg and the Tapwater RSL of 9.7 µg/L (both adjusted for an ELCR of 1×10^{-5}) - Detections are co-located in areas with other PAH impacts (including naphthalene) and in a NAPL area, and corrective measures conducted to address other PAHs will also address 1-methylnaphthalene
Cyclohexane	29/1228 (2%)	31,000	16/363 (4%)	113	Plant 2 - Area 5-4 Plant 3 - Area 17 Plant 6 - Areas 5-6, 5-7, 7, 9, 10	- Detections delineated to non-detect by several borings or monitoring wells within 100 feet of the detections - Detections in soil are well below the USEPA Industrial Soil Direct Contact RSL of 29,000,000 µg/kg - Detections in groundwater are well below the draft MDEQ Groundwater Concentration for Vapor Intrusion of 8,100 µg/L and the USEPA Tapwater RSL of 13,000 µg/L - The higher detections are co-located with other petroleum impacts, and corrective measures designed to address the other petroleum impacts will also address the cyclohexane impacts
Methylcyclohexane	62/1228 (5%)	270,000	17/363 (5%)	51	Plant 2 - Areas 1, 2, 5-3, 5-4, 5-5, 8 Plant 3 - Areas 16, 17 Plant 6 - Areas 5-5, 5-6, 5-7, 7, 9, 10	- Detections delineated by several soil borings and monitoring wells to non-detect within 100 feet of the detections - The higher detections (mg/kg range) are co-located with other petroleum impacts, and corrective measures designed to address the other petroleum impacts will also address the methylcyclohexane impacts

Notes:

µg/kg - microgram per kilogram

µg/L - microgram per liter

ELCR - excess lifetime cancer risk

FOD - frequency of detection

MDEQ - Michigan Department of Environmental Quality

NAPL - nonaqueous phase liquid

ND - not detected

PAH - polycyclic aromatic hydrocarbons

RSL - Regional Screening Level

USEPA - United States Environmental Protection Agency

USEPA RSLs - USEPA. 2012. Regional Screening Levels Tables. Available at http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/Generic_Tables/index.htm

Direct Contact RSL - based on incidental ingestion of, dermal contact with, and inhalation of volatiles and particulates from impacted soil

Tapwater RSL - based on ingestion of, dermal contact with, and inhalation of volatiles during domestic use of groundwater

Report Summary

Lab Sample ID(s): S52344.01-S52344.14

Project: B0064479.2012.00105

Collected Date: 04/30/2012

Submitted Date/Time: 04/30/2012 16:45

Sampled by: Unknown

P.O. #: PO125047

PCB reporting limit lowered.

Report Notes

Results relate only to items tested as received by the laboratory.

Methods may be modified for improved performance.

Results reported on a dry weight basis where applicable.

""Not detected"" indicates that parameter was not found at a level equal to or greater than the RL.

Samples are held by the lab for 30 days from the sample submittal date unless a written request to hold longer is provided by the client.

Report shall not be reproduced except in full, without the written approval of Merit Laboratories.

Laboratory Certifications:

Michigan DNRE (#9956), DOD/ISO 17025 (#L11-184), WBENC (#2005110032)

Ohio EPA (#CL0002), IN Drinking Water (#C-MI-07), NELAC NY (#11814), NELAC FL (#E871045)

Some analytes reported may not be certified. Full certification lists are available upon request.

2,4-Dinitrophenol	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	51-28-5	
2,4-Dinitrotoluene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	121-14-2	
2,6-Dinitrotoluene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	606-20-2	
3,3'-Dichlorobenzidine	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	91-94-1	
4,6-Dinitro-2-methylphenol	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	534-52-1	
Dibenzo(ah)anthracene	Not detected	ug/kg	300	8270C	05/02/12 23:36	PL	53-70-3	
Dibenzofuran	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	132-64-9	
Diethyl phthalate	Not detected	ug/kg	300	8270C	05/02/12 23:36	PL	84-66-2	
Dimethyl phthalate	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	131-11-3	
bis(2-Ethylhexyl)phthalate	Not detected	ug/kg	300	8270C	05/02/12 23:36	PL	117-81-7	
Fluoranthene	400	ug/kg	200	8270C	05/02/12 23:36	PL	206-44-0	
Fluorene	3,900	ug/kg	200	8270C	05/02/12 23:36	PL	86-73-7	
Hexachlorobenzene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	118-74-1	
Hexachlorobutadiene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	87-68-3	
Hexachlorocyclopentadiene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	77-47-4	
Hexachloroethane	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	67-72-1	
Indeno(1,2,3-cd)pyrene	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	193-39-5	
Isophorone	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	78-59-1	
2-Methylnaphthalene	200	ug/kg	200	8270C	05/02/12 23:36	PL	91-57-6	
2-Methylphenol	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	95-48-7	
3-, 4-Methylphenol	Not detected	ug/kg	300	8270C	05/02/12 23:36	PL	3/4-Cresol	
2-Nitroaniline	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	88-74-4	
2-Nitrophenol	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	88-75-5	

Analytical Laboratory Report

Revised Report

Lab Sample ID: S52344.10 (continued)

Sample Tag: SB-A5.2-NV133_4-5

Analysis	Results	Units	RL	Method	Run Date/Time	Analyst	CAS #	Flags
Organics - Semi-Volatiles (continued)								
TCL Semi-Volatile Organics (continued)								
3-Nitroaniline	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	99-09-2	
4-Nitroaniline	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	100-01-6	
4-Nitrophenol	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	100-02-7	
N-Nitrosodi-n-propylamine	Not detected	ug/kg	200	8270C	05/02/12 23:36	PL	621-64-7	
N-Nitrosodiphenylamine	800	ug/kg	200	8270C	05/02/12 23:36	PL	86-30-6
