Dear Ms. Jose:

**Re: DWSD Semi Annual Report – SD6 94508
(September 2018 through February 2019)
12950 Eckles Road
Livonia, Michigan 48150
Permit No.: SD6 94508**

GHD Services Inc. (GHD) is providing the attached documents for the reporting requirements of Special Discharge Permit SD6 94508 for the period of September 2018 through February 2019 for the RACER Eckles Road Site located at 12950 Eckles Road, Livonia, Michigan.

Special Discharge Permit SD6 94508 was issued in June 2011, renewed in June 2015 and is effective through June 30, 2019. A Permit Renewal/Reapplication form is currently being prepared for submittal to Great Lakes Water Authority (GLWA).

As previously discussed, RACER implemented a United States Environmental Protection Agency (U.S. EPA) approved remedial alternative consisting of in-situ chemical reduction (ISCR) of dissolved chromium and nickel through chemical injections into the impacted groundwater, essentially treating the groundwater in the subsurface. Full-scale ISCR injections were conducted in 2016 with follow-up targeted ISCR injections conducted in 2017. ISCR performance groundwater monitoring and evaluation were conducted through 2017 with supplemental groundwater samples collected in 2018.

As presented in the Modification of Groundwater Treatment System Request dated October 12, 2018 and submitted to GLWA, the current City of Detroit Water and Sewerage Department (DWSD) Special Discharge Permit effluent limits for the Eckles Road Site groundwater treatment plant (GWTP) are 3.98 mg/L for nickel and 2.77 mg/L for total chromium, which are more stringent than the general limits (5.0 mg/L for nickel and 25.0 mg/L for chromium). As a result of the ISCR injections, GWTP influent concentrations have been less than the DWSD permit effluent limits based on laboratory analysis performed weekly since January 2018. A summary of the GWTP influent sample results is provided in Table 1 and on Figure 1. GLWA approved the request to modify the Groundwater Treatment System processes in a letter dated October 22, 2018. A clarification letter was submitted to GLWA on October 25, 2018. Modified operation of the Groundwater Treatment System (elimination of chemical use/pH adjustment) began on December 3, 2018, as well as the required effluent sampling included in the GLWA approval.

Additionally, RACER temporarily ceased operations of the Groundwater Treatment System on December 20, 2018. The Groundwater Treatment System operations were ceased to evaluate groundwater

elevations and potential future minimum dewatering requirements. RACER plans to continue to implement dewatering activities on an as-needed basis to prevent flooding until final portions of the remedial alternative can be implemented and approval to discontinue dewatering (and therefore discontinue discharge to the sanitary sewer system) can be obtained from U.S. EPA. If approval to discontinue dewatering is received from U.S. EPA then no discharge will be necessary and the existing Special Discharge Permit can be terminated. The approximate schedule for receiving approval from U.S. EPA to discontinue dewatering activities through the groundwater extraction system and hence the need for operating and discharging to the sanitary sewer system is in 2019-2020.

It is noted that the schedule to obtain approval from U.S. EPA to discontinue groundwater extraction has been complicated by recent sampling results. As previously discussed, RACER collected groundwater samples to evaluate the potential presence of Per- and Polyfluoroalkyl Substances (PFAS) in groundwater at the Site. Based on detections of specific PFAS, the GWTP influent and effluent were also sampled for the analysis of PFAS in June 2018 and August 2018. A summary of results was provided in the March 2018 to August 2018 Semi-Annual Report. A PFAS Best Management Program (BMP) Plan is currently under development and will be submitted to GLWA for review.

Comments

No additional comments.

Receipt

The sample was received on 9/6/2018 10:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 6.0° C.

GC Semi VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 200.7 Rev 4.4: Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit: WT-012607-090518-EE-001 (240-100792-1). The continuing calibration blanks and method blanks may not support the lower PQL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method(s) 3520C, 608: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-344245.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

The bottles were labeled EE-001; the COC was EE-002. The sample ID should be EE-001.

Receipt

The sample was received on 10/4/2018 9:30 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.3° C.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method(s) 200.7 Rev 4.4: Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit: WT-012607-100318-EE-001 (240-102301-1). The continuing calibration blanks and method blanks may not support the lower PQL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method(s) 3520C, 608: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-348681.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Comments

Per GHD, the sample collection date is 11-7.

Receipt

The sample was received on 11/8/2018 9:45 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9° C.

GC Semi VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Metals

Method(s) 200.7 Rev 4.4, 6010B: Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit: WT-012607-110718-EE-001 (240-104074-1). The continuing calibration blanks and method blanks may not support the lower PQL.

Method(s) 245.1, 7470A: Hot block take out temperature for prep batch 354559 was below the recommended 90-95C range. Analysis of the QC show acceptable recoveries and therefore suggest sample results were unaffected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

Method(s) 3520C, 608: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-354852.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 200.7 Rev 4.4, 6010B, 6010D: Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit: W-012607-120518-EE-001 (240-105286-1). The continuing calibration blanks and method blanks may not support the lower PQL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Receipt

The samples were received on 12/6/2018 9:50 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2° C.

GC/MS VOA

Method(s) 624.1: The following samples were received preserved with hydrochloric acid: W-012607-120518-EE-001 (240-105286-1) and TRIP BLANK (240-105286-2). The requested target analyte list contains 2-Chloroethyl vinyl ether and/or Acrolein, which are acid-labile compounds that degrade in an acidic medium.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 625.1: The continuing calibration verification (CCV) associated with batch 240-359023 recovered above the upper control limit for 2,2'-oxybis[1-chloropropane]. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC Semi VOA

Method(s) 608.3: The following samples required a tetrabutylammonium sulfite (TBA) clean-up to reduce matrix interferences caused by sulfur: W-012607-120518-EE-001 (240-105286-1). 3934169, 3800132, 3869666.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Organic Prep

Method(s) 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-358793.

Method(s) 3510C: Insufficient sample volume was available to perform a matrix spike/matrix spike duplicate (MS/MSD) associated with preparation batch 240-359261.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Receipt

The sample was received on 12/20/2018 10:30 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.2° C.

Metals

Method(s) 200.7 Rev 4.4, 6010B: Some requested practical quantitation limits (PQLs) on the following samples fall below the laboratory's verified standard quantitation limit: W-012607-121918-EE-002 (240-106058-1). The continuing calibration blanks and method blanks may not support the lower PQL.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.
